Ghostwriting Modernism Helen Sword, 2018-05-31 Spiritualism is often dismissed by literary critics and historians as merely a Victorian fad. Helen Sword demonstrates that it continued to flourish well into the twentieth century and seeks to explain why. Literary modernism, she maintains, is replete with ghosts and spirits. In *Ghostwriting Modernism* she explores spiritualism's striking persistence and what she calls the vexed relationship between mediumistic discourse and modernist literary aesthetics. Sword begins with a brief historical review of popular spiritualism's roots in nineteenth-century literary culture. In subsequent chapters, she discusses the forms of mediumship most closely allied with writing, the forms of writing most closely allied with mediumship, and the thematic and aesthetic alliances between popular spiritualism and modernist literature. Finally, she accounts for the recent proliferation of a spiritualist-influenced vocabulary (ghostliness, hauntings, the uncanny) in the works of historians, sociologists, philosophers, and especially literary critics and theorists. Documenting the hitherto unexplored relationship between spiritualism and modern authors (some credulous, some skeptical), Sword offers compelling readings of works by James Joyce, T. S. Eliot, W. B. Yeats, H.D., James Merrill, Sylvia Plath, and Ted Hughes. Even as modernists mock spiritualism's ludicrous lingo and deride its metaphysical excesses, she finds, they are intrigued and attracted by its ontological shiftiness, its blurring of the traditional divide between high culture and low culture, and its self-serving tendency to favor form over content (medium, so to speak, over message). Like modernism itself, Sword asserts, spiritualism embraces rather than eschews paradox, providing an ideological space where conservative beliefs can coexist with radical, even iconoclastic, thought and action.

Dreams of Other Worlds Chris Impey, Holly Henry, 2013-09-08 Describes the unmanned space missions that have opened new windows on distant worlds.

Searching for Habitable Worlds Abel Méndez, Wilson González-Espada, 2016-04-01 What does it take to consider a planet potentially habitable? If a planet is suitable for life, could life be present? Is life on other planets inevitable? *Searching for Habitable Worlds* answers these questions and provides both the general public and astronomy enthusiasts with a richly illustrated discussion of the most current knowledge regarding the search for extrasolar planets. Nearly everyone wants to know if we are alone in the universe. This book might not have the answers, but shows where we should look. This book is a fun and accessible book for everyone from middle schoolers to amateur astronomers of all ages. The use of non-technical language and abundant illustrations make this a quick read to inform everyone about the latest movement in the search for other planets that we might be able to inhabit. After a brief discussion on why humans are hard-wired to be curious, and to explore the unknown, the book describes what extrasolar planets are, how to detect them, and how to pin down potential targets. In addition, a data-driven list of the best candidates for habitability is profiled and the next generation of exoplanet-hunting scientific

instruments and probes are identified.

The Planet Factory Elizabeth Tasker,2017-09-07 Forget about rockets to Mars – the future of space science lies with the search for exoplanets Twenty years ago, the search for planets outside the Solar System was the preserve of science-fiction writers. Now it's one of the fastest-growing fields in astronomy, with thousands of exoplanets discovered to date, and the number rising fast. These new-found worlds are more alien than anything in fiction. Planets larger than Jupiter with years lasting a week; others with two suns lighting their skies, or with no sun at all. Planets with diamond mantles supporting oceans of tar; possible Earth-sized worlds with split hemispheres of perpetual day and night; waterworlds drowning under global oceans and volcanic lava planets awash with seas of magma. The discovery of this diversity is just the beginning. There is a whole galaxy of possibilities. The Planet Factory tells the story of these exoplanets. What can we learn about these faraway surface environments and planetary atmospheres? And do the results hint at the tantalising possibility of alien life?

Habitability of Other Planets and Satellites Jean-Pierre de Vera,Joseph Seckbach,2013-07-30 Is the Earth the right model and the only universal key to understand habitability, the origin and maintenance of life? Are we able to detect life elsewhere in the universe by the existing techniques and by the upcoming space missions? This book tries to give answers by focusing on environmental properties, which are playing a major role in influencing planetary surfaces or the interior of planets and satellites. The book gives insights into the nature of planets or satellites and their potential to harbor life. Different scientific disciplines are searching for the clues to classify planetary bodies as a habitable object and what kind of instruments and what kind of space exploration missions are necessary to detect life. Results from model calculations, field studies and from laboratory studies in planetary simulation facilities will help to elucidate if some of the planets and satellites in our solar system as well as in extra-solar systems are potentially habitable for life.

New York Magazine ,1984-01-23 New York magazine was born in 1968 after a run as an insert of the New York Herald Tribune and quickly made a place for itself as the trusted resource for readers across the country. With award-winning writing and photography covering everything from politics and food to theater and fashion, the magazine's consistent mission has been to reflect back to its audience the energy and excitement of the city itself, while celebrating New York as both a place and an idea.

Faraway Worlds Paul Halpern,2004 A introduction to the search for and discovery of planets outside our solar system and what life may be like on such distant worlds.

Keynes and his Contemporaries Atsushi Komine,2014-05-09 This book examines how the Cambridge School economists, such as J. M. Keynes, constructed revolutionary theories and advocated drastic policies based on their ideals for social organizations and their personal characteristics. Although vast numbers of

studies on Marshall, Keynes and Marshallians have been published, there have been very few studies on the ‘Keynesian Revolution’ or Keynes’s relevance to the modern world from archival and intellectual viewpoints which focus on Keynes as a member of the Cambridge School. This book approaches Keynes from three directions: person, time and perspective. The book provides a better understanding of how Keynes struggled with problems of his time and it also offers valuable lessons on how to survive fluctuating global capitalism today. It focuses on eight key economists as a group in ‘a public sphere’ rather than as a school (a unified theoretical denominator), and clarifies their visions and the widespread beliefs at the time by investigating their common motivations, lifestyles, values and habits.

Strange New Worlds Ray Jayawardhana, 2013-04-21 Describes the science of planet hunters, the prospects for the discovery of alien life, and discusses the controversies surrounding extrasolar-planet research.

Television for Women Rachel Moseley, Helen Wheatley, Helen Wood, 2016-11-10 Television for Women brings together emerging and established scholars to reconsider the question of ‘television for women’. In the context of the 2000s, when the potential meanings of both terms have expanded and changed so significantly, in what ways might the concept of programming, addressed explicitly to a group identified by gender still matter? The essays in this collection take the existing scholarship in this field in significant new directions. They expand its reach in terms of territory (looking beyond, for example, the paradigmatic Anglo-American axis) and also historical span. Additionally, whilst the influential methodological formation of production, text and audience is still visible here, the new research in Television for Women frequently reconfigures that relationship. The topics included here are far-reaching; from television as material culture at the British exhibition in the first half of the twentieth century, women’s roles in television production past and present, to popular 1960s television such as *The Liver Birds* and, in the twenty-first century, highly successful programmes including *Orange is the New Black*, *Call the Midwife*, *One Born Every Minute* and *Wanted Down Under*. This book presents ground-breaking research on historical and contemporary relationships between women and television around the world and is an ideal resource for students of television, media and gender studies.

The Astronomy Revolution Donald G. York, Owen Gingerich, Shuang-Nan Zhang, 2016-04-19 Some 400 years after the first known patent application for a telescope by Hans Lipperhey, *The Astronomy Revolution: 400 Years of Exploring the Cosmos* surveys the effects of this instrument and explores the questions that have arisen out of scientific research in astronomy and cosmology. Inspired by the international New Vision 400 conference held
