When you have a weather related question you will easily find it answered in an understandable way regardless of how technical the concept may be. We think the most valuable parts of the book are the parts that help you interpret data and set up your own weather station. Combined with these sections we recommend the information on how to estimate events like wind speed, even though you are not at your weather station. By reading this book you might get hooked as we did on fun weather indicators like weather rocks or the Vermont weather stick. Our hope is that by reading Pogonips you will join us in the fun of being a weather watcher and start your own weather records. Who knows, locals in your area may call you for your weather guess when they plan outdoor weddings or a barbecue.

Text-Book of Long Range Weather Forecasting George J. McCormack,2012-04 George J. McCormack, (1887-1974) had a life-long interest in astrology and the weather. Inspired by the astrometeorological work of A.J. Pearce (1840-1923), McCormack meticulously tracked and recorded the weather, from before World War I, until his death more than half a century later. In 1947, after 23 years of research, he published his key to long-range weather forecasting, being this book. Confident of his ability, in the spring of 1947 McCormack predicted one of the most severe winters in decades, specifically forecasting the infamous snows of December 26, 1947. He was nationally famous overnight. The techniques he used are in this amazing book. With study, they will become yours. The weather bureau predicts the weather, day by day, by careful observation of current conditions. You can learn to predict based on underlying celestial factors, which can be known months, even years, in advance. In 1963, before the US Weather Bureau, and again in 1964, before the American Meteorological Society, McCormack presented his life's work. Both groups ignored him, to our great loss. Use this book, make a better choice.
