The Impatient Woman's Guide to Getting Pregnant Jean M. Twenge, 2012-04-17 Comforting and intimate, this “girlfriend” guide to getting pregnant gets to the heart of all the emotional issues around having children—biological pressure, in-law pressures, greater social pressures—to support women who are considering getting pregnant. Trying to get pregnant is enough to make any woman impatient. The Impatient Woman’s Guide to Getting Pregnant is a complete guide to the medical, psychological, social, and sexual aspects of getting pregnant, told in a funny, compassionate way, like talking to a good friend who’s been through it all. And in fact, Dr. Jean Twenge has been through it all—the mother of three young children, she started researching fertility when trying to conceive for the first time. A renowned sociologist and professor at San Diego State University, Dr. Twenge brought her research background to the huge amount of information—sometimes contradictory, frequently alarmist, and often discouraging—that she encountered online, from family and friends, and in books, and decided to go into the latest studies to find out the real story. The good news is: There is a lot less to worry about than you’ve been led to believe. Dr. Twenge gets to the heart of the emotional issues around getting pregnant, including how to prepare mentally and physically when thinking about conceiving; how to talk about it with family, friends, and your partner; and how to handle the great sadness

of a miscarriage. Also covered is how to know when you're ovulating, when to have sex, timing your pregnancy, maximizing your chances of getting pregnant, how to tilt the odds toward having a boy or a girl, and the best prenatal diet. Trying to conceive often involves an enormous amount of emotion, from anxiety and disappointment to hope and joy. With comfort, humor, and straightforward advice, *The Impatient Woman's Guide to Getting Pregnant* is the bedside companion to help you through it.

Motherhood ? Is It for Me? Denise L. Carlini, Ann Davidman, 2016-11-15
Deciding yes or not to motherhood can be fraught with confusion, pain, and loneliness. Many a woman is undecided about arguably the most important life-defining decision she'll make in her lifetime. With the 'Motherhood -- Is it for me?' program, the authors of this book, both dedicated and seasoned psychotherapists, created a process that has helped countless women over the last 25 years. Finally available in print, this program is the perfect resource for closely examining ambivalence around this crucial life choice. Through precise steps, readers are guided on their own personal journeys toward deeper understanding and learn what they really want. The process even allows a woman who is experiencing extremely painful immobilization to find her way through to her true desire. The authors know from their professional experience that an analytical pros-and-cons approach often fails to successfully answer this most personal question. Interspersed throughout this book are twenty diverse stories of women who made conscious choices, half deciding yes and half deciding no. Their stories -- and sometimes advice -- create a valuable community that provides support to every reader, breaking the isolation they may feel.--Book cover.

The Palgrave Handbook of Critical Menstruation Studies Chris Bobel, Inga T. Winkler, Breanne Fahs, Katie Ann Hasson, Elizabeth Arveda Kissling, Tomi-Ann Roberts, 2020-07-24 This open access handbook, the first of its kind, provides a comprehensive and carefully curated multidisciplinary and genre-spanning view of the state of the field of Critical Menstruation Studies, opening up new directions in research and advocacy. It is animated by the central question: “what new lines of inquiry are possible when we center our attention on menstrual health and politics across the life course?” The chapters—diverse in content, form and perspective—establish Critical Menstruation Studies as a potent lens that reveals, complicates and unpacks inequalities across biological, social, cultural and historical dimensions. This handbook is an unmatched resource for researchers, policy makers, practitioners, and activists new to and already familiar with the field as it rapidly develops and expands.

Self-Tracking, Health and Medicine Deborah Lupton, 2017-10-02 Self-tracking practices are part of many health and medical domains. The introduction of digital technologies such as smartphones, tablet computers, apps, social media platforms, dedicated patient support sites and wireless devices for medical monitoring has contributed to the expansion of opportunities for people to engage in self-tracking of their bodies and health and illness states. The contributors to this book cover a range of self-tracking techniques, contexts and geographical locations: fitness tracking using the

wearable Fitbit device in the UK; English adolescent girls' use of health and fitness apps; stress and recovery monitoring software and devices in a group of healthy Finns; self-monitoring by young Australian illicit drug users; an Italian diabetes self-care program using an app and web-based software; and 'show-and-tell' videos uploaded to the Quantified Self website about people's experiences of self-tracking. Major themes running across the collection include the emphasis on self-responsibility and self-management on which self-tracking rationales and devices tend to rely; the biopedagogical function of self-tracking (teaching people about how to be both healthy and productive biocitizens); and the reproduction of social norms and moral meanings concerning health states and embodiment (good health can be achieved through self-tracking, while illness can be avoided or better managed). This book was originally published as a special issue of the Health Sociology Review.

Hormonal Contraception and Post-menopausal Hormonal Therapy IARC Working Group on the Evaluation of Carcinogenic Risks to Humans,1999 Evaluates evidence for an increased risk of cancer in women using combined oral contraceptives, progestogen-only hormonal contraceptives, post-menopausal estrogen therapy, and post-menopausal estrogen-progestogen therapy. Although the carcinogenicity of these preparations has been extensively investigated, the book stresses the many complex methodological issues that must be considered when interpreting findings and weighing results. Evidence of an association between use of these preparations and positive effects on health, including a reduced risk of some cancers, is also critically assessed. The first and most extensive monograph evaluates evidence of an association between the use of combined oral contraceptives and cancer at nine sites. Concerning breast cancer, the evaluation concludes that, even if the association is causal, the excess risk for breast cancer associated with patterns of use that are typical today is very small. Studies of predominantly high-dose preparations found an increased risk of hepatocellular carcinoma in the absence of hepatitis viruses. Citing these findings, the evaluation concludes that there is sufficient evidence in humans for the carcinogenicity of combined oral contraceptives. The evaluation also found sufficient evidence for the carcinogenicity of some, but not all, combined preparations in animals. Combined oral contraceptives were classified as carcinogenic to humans. The evaluation also cites conclusive evidence that these agents have a protective effect against cancers of the ovary and endometrium. Progestogen-only contraceptives are evaluated in the second monograph, which considers the association with

cancer at six sites. The evaluation found no evidence of an increased risk for breast cancer. Although the evaluation found sufficient evidence in animals for the carcinogenicity of medroxyprogesterone acetate, evidence for the carcinogenicity of progestogen-only contraceptives in humans was judged inadequate. Progestogen-only contraceptives were classified as possibly carcinogenic to humans. The third monograph, on post-menopausal estrogen therapy, considers evidence of an association with cancer at eight sites. Findings from a large number of epidemiological studies indicate a small increase in the risk of breast cancer in women who have used these preparations for five years or more. Studies consistently show an association between use of post-menopausal estrogen therapy and an increased risk for endometrial cancer. Data on the association with other cancers were either inconclusive or suggested no effect on risk. The evaluation concludes that post-menopausal estrogen therapy is carcinogenic to humans. The final monograph evaluates the association between the use of post-menopausal estrogen-progestogen therapy and cancer at four sites. The evaluation of limited data on breast cancer found an increased relative risk observed with long-term use. Data were judged insufficient to assess the effects of past use and of different progestogen compounds, doses, and treatment schedules. For endometrial cancer, the evaluation found an increase in risk relative to non-users when the progestogen was added to the cycle for 10 days or fewer. Post-menopausal estrogen-progestogen therapy was classified as possibly carcinogenic to humans. Concerning post-menopausal therapy in general, the book notes that evidence of carcinogenic risks must be placed in perspective of potential benefits. The prevention of osteoporotic fractures is cited as the best-established benefit. Evidence also suggests that estrogen prevents

heart disease and may prevent memory loss and dementia.
