Solving of Determinants with Functional Graphs Anatoly Rozenblat,2015-03-09 The content of this book is related to a specific topic in linear algebra advantageously to the matrix determinant. The main objective of this book to reduce the calculation processes for matrices determinants  $3 \leq n \leq 6$  with application of functional graphs on base of expansion and Laplace methods. In this book is included many extensive exercises that can assist students to solve of some complex problems in process of evaluation the determinants with use of functional graphs. Special features of this book include the following: • Guide to the use graphs for matrices determinants • Solving of determinants for matrices  $2 \leq n \leq 3$  • General algorithms for evaluation of determinants with matrices  $4 \leq n \leq 6$  • Functional graphs and algorithms for symmetric and oblique (skew) determinants

Hydro-Electric Turbines Simulation and Optimization Joseph Nowarski,2017-01-27 This work introduces hydroelectric power plant optimization method. The paper also includes some background information used for preparation of Hydro-Electric Energy On-line Calculator, as on site: <http://www.geocities.ws/nowarski/calculators/Hydro.html> The calculator is for general information only; it does not include many components and must not be used for actual design, economic evaluation, or decisions regarding any real project. In addition, the calculator applies Francis turbine efficiency curve formula which is specific for this work and for the calculator and cannot be used for other turbines. The calculator is applied in this work for simulation of the hydroelectric power plant electricity export and for optimization of turbine size. Estimation of amount of electricity which will be generated and exported from hydroelectric plant is the most important step in decision taking process regarding the hydro project. The amount of electricity exported from the hydroelectric plant will be much lower than the nominal power of the turbine considering 24 hours a day and 365 days a year. The optimization using this online calculator allows determination of optimum turbine size for various patterns of the available water flow. The optimization includes energy and economic considerations. From the energy point of view, the aim of the optimization is to find the turbine power, which results in highest net electricity export. From the economic point of view, the aim of the optimization is to find the turbine power that results in highest net income. Application of the calculator for simulation and optimization can significantly save investment cost of the project and increase net profit.

The Genus Salix in Alaska and the Yukon George William Argus,1973 The revision of the genus Salix which is presented here is based on field studies which attempt to understand the species in terms of the following: population variation, developmental variation, environmentally induced variation, ecological preferences, and modification as a result of hybridization and introgression, as well as on a study of herbarium specimens and the literature. The role that Salix species play in successional development on glacial moraine in southeastern Alaska, on glacial outwash plains in the Alaska Range, on river alluvium in central Alaska, and on gravel floodplains in arctic Alaska is discussed. Their success as colonizers is based on their growth forms and on their reproductive, evolutionary, and ecological characteristics. (Author).
