Patent Searching Made Easy David Hitchcock, 2022 There's no sense spending countless hours and thousands of dollars on a patent application if someone else has beaten you to the U.S. Patent and Trademark Office. *Patent Searching Made Easy* is the number one guide to understanding the invention landscape--whether you're looking to turn an idea into protected intellectual property, or just researching the marketplace--while avoiding expensive patent-searching fees.

Patent Searching Made Easy David Hitchcock, 2009 Written by inventor David Hitchcock, this book explains step by step how to use an Internet browser to search U.S. patents. It discusses how to classify an invention properly, and then, using that classification, find all relevant patents issued within that class. Whether browsing infant flotation devices or computerized pet toys, the inventor can quickly tell by searching over the Internet whether he or she is in the running to be the first. *Patent Searching Made Easy* shows how to: Conduct a full patent search Search patents filed in foreign countries Verify the patent status of ideas submitted to businesses for development Use fee-based patent search services online An ideal companion to *Nolos Patent It Yourself* and *How to Make Patent Drawings*, the 5th edition is updated to include the latest patent rules and regulations.

Patent Searching Made Easy David Hitchcock, 1999 Describes what a patent is and what it does, and provides the vocabulary, instructions, and strategies needed to patent search on the Internet.

Patent, Trademark, and Copyright Searching on the Internet Charles C. Sharpe, 1999-11-01 In 1998 the U.S. Patent Office introduced searchable databases for patents and trademark registrations. Once available only through time-consuming trips to a Patent and Trademark Depository Library, such information now is as near as your PC - if you know how to look for it. Begin with a look through this handy guide. From basic definitions to step-by-step instructions, it offers all the information you need to find patent and trademark information online. Sample web pages illustrate the types of sites you may encounter. Also discussed are the definitions, laws, and application procedures for copyright.

Patents Handbook Fred K. Carr, 2009-04-09 This work first provides a general overview of the U.S. patent system, covering such issues as the patent document and patent infringement. The requirements of the invention and the conditions for patentability are discussed, with a focus on the patent application and the approval process. Major patent offices and international patent treaties are

next examined, providing a full description of both the U.S. and international patent and classification systems. Methods for searching patent documents, the requirements of a reference, and general patent rights are discussed.

The Patent Searching Guide for New Business Noah George,2022-08-20 GETTING STARTED WITH PATENT SEARCHING Do you wish to discover the methods of investigation for patent search? Do you want to know how to trademark your company? This book serves as a condensed version of all you need to know. A patent search is a search of issued patents and published patent applications for inventions that might be considered important prior art references when applying for a patent. The prior art is anything in the public domain, patented or not patented, that may determine whether an invention is novel or not. You can begin your patent search by choosing a relevant keyword if the tool you are using offers more advanced search features such as semantic search. Such features may help to identify your search intent and can provide you with the most accurate search results. It is often the first thing that is done in the invention startup process. The purpose of a patent search is to determine how different an invention is from what already exists in the prior art. It will not tell you if your invention infringes someone else's patent. How to File a Patent: Search the United States Patent and Trademark Office Find a patent attorney Determine what type of patent you need File a provisional patent application Become a Registered eFiler Gather information for your formal application Complete and review your formal application. Current Challenges in Patent Information Retrieval Mihai Lupu,Katja Mayer,Noriko Kando,Anthony J. Trippe,2017-03-24 This second edition provides a systematic introduction to the work and views of the emerging patent-search research and innovation communities as well as an overview of what has been achieved and, perhaps even more importantly, of what remains to be achieved. It revises many of the contributions of the first edition and adds a significant number of new ones. The first part "Introduction to Patent Searching" includes two overview chapters on the peculiarities of patent searching and on contemporary search technology respectively, and thus sets the scene for the subsequent parts. The second part on "Evaluating Patent Retrieval" then begins with two chapters dedicated to patent evaluation campaigns, followed by two chapters discussing complementary issues from the perspective of patent searchers and from the perspective of related domains, notably legal search. "High Recall Search" includes four completely new chapters dealing with the issue of finding only the relevant documents in a reasonable time span. The last (and with six papers the largest) part on "Special Topics in Patent Information Retrieval" covers a large spectrum of research in the patent field, from classification and image processing to translation. Lastly, the book is completed by an outlook on open issues and future research. Several of the chapters have been jointly written by intellectual property and information retrieval experts. However, members of both communities with a background different to that of the primary author have reviewed the chapters, making the book accessible to both the patent search community and to the information retrieval research community. It also not only offers the latest findings for academic researchers, but is also a valuable resource for IP professionals wanting to learn about current IR approaches in the patent domain.
