Structural, Syntactic, and Statistical Pattern Recognition Niels da Vitoria Lobo, Takis Kasparis, Michael Georgiopoulos, Fabio Roli, James Kwok, Georgios C. Anagnostopoulos, Marco Loog, 2008-12-02 This volume in the Springer Lecture Notes in Computer Science (LNCS) series contains 98 papers presented at the S+SSPR 2008 workshops. S+SSPR 2008 was the sixth time that the SPR and SSPR workshops organized by Technical Committees, TC1 and TC2, of the International Association for Pattern Recognition (IAPR) were held as joint workshops. S+SSPR 2008 was held in Orlando, Florida, the family entertainment capital of the world, on the beautiful campus of the University of Central Florida, one of the up and coming metropolitan universities in the USA. S+SSPR 2008 was held during December 4–6, 2008 only a few days before the 19th International Conference on Pattern Recognition (ICPR2008), which was held in Tampa, only two hours away from Orlando, thus giving the opportunity of both conferences to attendees to enjoy the many attractions offered by two neighboring cities in the state of Florida. SPR 2008 and SSPR 2008 received a total of 175 paper submissions from many different countries around the world, thus giving the workshop an international clout, as was the case for past workshops. This volume contains 98 accepted papers: 56 for oral presentations and 42 for poster presentations. In addition to parallel oral sessions for SPR and SSPR, there was also one joint oral session with papers of interest to both the SPR and SSPR communities. A recent trend that has emerged in the pattern recognition and machine learning research communities is the study of graph-based methods that integrate statistical and structural approaches.

Huntington's Disease Todd Eckdahl,2017-04-04 This book describes Huntington's disease (HD), a rare neurodegenerative genetic disorder that causes a triad of motor, cognitive, and psychiatric/behavioral symptoms and affects about 6 in 100,000 people worldwide. Although the age of onset of HD symptoms is usually 30 to 50 years, a rare juvenile-onset form of HD also occurs. The autosomal dominant pattern of inheritance followed by HD is illustrated in the book with pedigree scenarios. The author details how mutations in the HTT gene on chromosome 4 cause HD and how a genetic test can be used by people who might have inherited adult-onset HD and couples who are at risk for passing HD on to their children. The book describes the available treatments for HD and presents new approaches such as experimental drugs, stem cell therapy, and gene therapy that might be able to effectively treat or even cure HD.

Prehistoric Sitagroi Ernestine S. Elster,Colin Renfrew,2003-07-01 Recipient of the Jo Anne Stolaroff Cotsen Prize Volume 2 presents the concluding research on Sitagroi, a prehistoric settlement mound in northeastern Greece, excavated between 1968 and 1970. This volume offers a detailed report on the plant remains along with a full treatment of craft and technology: artifacts of adornment; tools of bone and flaked stone; artifacts and tools of bone and ground and polished stone (and petrology); tools of the spinner, weaver and mat maker; pottery technology; metallurgy; and special clay finds such as seals, miniatures, and utensils. This rich presentation offers unparalleled insights into the life of the prehistoric inhabitants of the area. Sitagroi now becomes one of the most comprehensively published sites from prehistoric Europe and will be indispensable for all those concerned with European prehistory.

Thermoregulation Part II ,2018-11-17 Thermoregulation, Part II: From Basic Neuroscience to Clinical Neurology, Volume 155, not only reviews how body temperature regulation changes in neurological diseases, but also how this aspect affects the course and outcomes of each disease. Other sections of the volume review three therapeutic approaches that are aimed at manipulating body temperature, including induced hypothermia, induced hyperthermia and antipyretic therapy. The book is comprised of nine sections across two volumes, five dealing with the basic aspects of body temperature regulation and four dealing with the clinical aspects. Basic sections cover the Thermoregulation system, Thermoreceptors, Thermoeffectors, Neural pathways, and Thermoregulation as a homeostatic function. In addition, the book covers the physiology and neuroanatomy of the thermoregulation system and provides descriptions of how the regulation of body temperature intervenes with other physiological functions (such as sleep, osmoregulation, and immunity), stress, exercise and aging. Basic sections serve as an introduction to the four clinical sections: Body Temperature, Clinical Significance, Abnormal Body Temperature, Thermoregulation in Neurological Disease and Therapeutic Interventions. Presents a clear, logical pathway from the fundamental physiology of thermoregulation, through neurobiology, to clinical applications and disease Enables researchers and clinicians to better understand the value of temperature measurement in disease and the use of temperature as a therapy Integrates content from a broad field of research, including topics on the molecular physiology of temperature receptors, to the management of accidental hypothermia

The Neuropathology of Huntington's Disease: Classical Findings, Recent Developments and Correlation to Functional Neuroanatomy Udo Rüb,Jean

Paul G. Vonsattel, Helmut Heinsen, Horst-Werner Korf, 2015-09-29 This monograph describes the progress in neuropathological HD research made during the last century, the neuropathological hallmarks of HD and their pathogenic relevance. Starting with the initial descriptions of the progressive degeneration of the striatum as one of the key events in HD, the worldwide practiced Vonsattel HD grading system of striatal neurodegeneration will be outlined. Correlating neuropathological data with results on the functional neuroanatomy of the human brain, subsequent chapters will highlight recent HD findings: the neuronal loss in the cerebral neo-and allocortex, the neurodegeneration of select thalamic nuclei, the affection of the cerebellar cortex and nuclei, the involvement of select brainstem nuclei, as well as the pathophysiological relevance of these pathologies for the clinical picture of HD. Finally, the potential pathophysiological role of neuronal huntingtin aggregations and the most important and enduring challenges of neuropathological HD research are discussed.

Huntington's Disease Gillian Bates, Peter Harper, Lesley Jones, 2002-10-03 It is now almost a decade since the identification of the Huntington's Disease gene and its mutation, during which time, major advances in our understanding of this disorder have been achieved. Since publication of the first two editions of this book, there have been considerable insights into how the mutation leads to the molecular pathology, neuropathology and clinical symptoms of Huntington's Disease, and experimental tools are now in place to take this research further towards new therapeutic approaches. As a result of these major advances, this well-established series of books has required radical updating. An international group of researchers and clinicians with specialist interests in HD has been commissioned to document the recent advances in our understanding of this disease. Developments in the fields of structural biology, cell biology, neurochemistry and neuropathology, with full coverage of transgenic animal models, are discussed in detail. The clinical sections cover genetic, neurological and psychiatric aspects as well as new developments in therapy. This book will continue to provide an invaluable source of information for clinicians and scientists involved with Huntington's Disease, including geneticists, psychiatrists and neurologists, and basic science research workers in genetics and neurobiology.

Embodying Beauty Malin Pereira, 2014-01-14 This study argues that twentieth-century American women writers' textual representations of female beauty generally recognize a link between beauty standards and aesthetic ideology, exploring female beauty as a symptom of prevailing ideas about art and esthetics. Female beauty, in their texts, is not merely an issue of whether a female character is pretty or not; it is an expression of the controlling discourses negotiated by character, text, and author. In this study, therefore, the women writers' texts are read after interchapters outlining their key cultural and literary contexts. Revising Paul de Man's method of exploring scenes of reading, this study focuses on scenes of beauty in which a character, narrator, or speaker negotiates ideas about beauty. The author pairs Euro-American and African American women writers across the century in three generations: H.D. and Zora Neale Hurston; Gwendolyn Brooks and Sylvia Plath; and Toni Morrison and Louis Gluck. As such, this study offers a landmark black/white dialogue on female beauty in twentieth-century American culture and literature. Scenes of beauty in the texts of these writers suggest multiple feminine aesthetics in twentieth-century American writing, unified in their negotiation of the aesthetic ideologies embodied in female beauty.

Genetic Aberrancies and Neurodegenerative Disorders M.P. Mattson, 2000-01-28 Genetic Aberrancies and Neurodegenerative Disorders presents critical reviews and emerging findings concerning the roles of genetic mutations and polymorphisms in the pathogenesis of a range of neurological disorders including Alzheimer's and Parkinson's diseases, trinucleotide repeat disorders, stroke, epilepsy and others. This volume, written by leading experts, brings together fundamental information concerning the roles of inherited traits in the pathogenesis of different neurodegenerative disorders. In addition to providing a catalogue of the known genetic alterations that are linked to specific neurodegenerative disorders, the chapters detail the current state of understanding of the cellular and biochemical mechanisms whereby the genetic aberrancies lead to neuronal dysfunction and

degeneration. The emerging picture of each disorder, painted by pathological, biochemical and molecular brushes, suggests that they share key mechanisms including increased levels of oxidative stress, perturbed ion homeostasis, mitochondrial dysfunction and apoptotic proteolytic cascades. The existence of specific molecular defects provides the opportunity to design experiments that can establish the precise pathogenic mechanism of a specific mutation or genetic risk factor. The value of this approach is exemplified by recent studies of how mutations in Cu/Zn-superoxide dismutase cause amyotrophic lateral sclerosis and how presenilin mutations result in early-onset Alzheimer's disease. A theme developed among the different chapters is that events that occur during aging predispose neurons to genetic aberrancies that promote degenerative cascades, and that specific genetic defects exert their influence on particular populations of neurons in a disorder-specific manner. The chapters in this volume will stimulate readers to generate new hypotheses concerning the pathogenic mechanisms of genetic aberrancies that can be experimentally tested.
