Game Feel Steve Swink, 2008-10-13 Game Feel exposes feel as a hidden language in game design that no one has fully articulated yet. The language could be compared to the building blocks of music (time signatures, chord progressions, verse) - no matter the instruments, style or time period - these building blocks come into play. Feel and sensation are similar building blocks when

Rerolling Boardgames Douglas Brown, Esther MacCallum-Stewart, 2020-08-27 Despite the advent and explosion of videogames, boardgames--from fast-paced party games to intensely strategic titles--have in recent years become more numerous and more diverse in terms of genre, ethos and content. The growth of gaming events and conventions such as Essen Spiel, Gen Con and the UK Games EXPO, as well as crowdfunding through sites like Kickstarter, has diversified the evolution of game development, which is increasingly driven by fans, and boardgames provide an important glue to geek culture. In academia, boardgames are used in a practical sense to teach elements of design and game mechanics. Game studies is also recognizing the importance of expanding its focus beyond the digital. As yet, however, no collected work has explored the many different approaches emerging around the critical challenges that boardgaming represents. In this collection, game theorists analyze boardgame play and player behavior, and explore the complex interactions between the sociality, conflict, competition and cooperation that boardgames foster. Game designers discuss the opportunities boardgame system designs offer for narrative and social play. Cultural theorists discuss boardgames' complex history as both beautiful physical artifacts and special places within cultural experiences of play.

Games and Rules Beat Suter, Mela Kocher, René Bauer, 2019-03-31 Why do we play games and why do we play them on computers? The contributors of »Games and Rules« take a closer look at the core of each game and the motivational system that is the game mechanics. Games are control circuits that organize the game world with their (joint) players and establish motivations in a dedicated space, a »Magic Circle«, whereas game mechanics are constructs of rules designed for interactions that provide gameplay. Those rules form the base for all the excitement and frustration we experience in games. This anthology contains individual essays by experts and authors with backgrounds in Game Design and Game Studies, who lead the discourse to get to the bottom of game mechanics in video games and the real world - among them Miguel Sicart and Carlo Fabricatore.

Architectonics of Game Spaces Andri Gerber, Ulrich Götz, 2020-03-31 What consequences does the design of the virtual yield for architecture and to what extent can the nature of architecture be used productively to turn game-worlds into sustainable places - over here, in »reality«? This pioneering collection gives an overview of contemporary developments in designing video games and of the

relationships such practices have established with the design of architecture. Due to their often simulatory nature, games reveal constructions of reality while positively impacting spatial ability and allowing for alternative avenues to complex topics and processes of negotiation. Granting insight into the merging of the design of real and virtual environments, this volume offers an invaluable platform for further debate.

Trigger Happy Steven Poole, 2011-11-07 The Edge calls Trigger Happy a seminal piece of work. For the first time ever, an aficionado with a knowledge of art, culture, and a real love of gaming takes a critical look at the future of our videogames, and compares their aesthetic and economic impact on society to that of film. Thirty years after the invention of the simplest of games, more videogames are played by adults than children. Critical Theory Today Lois Tyson, 2012-09-10 Critical Theory Today is the essential introduction to contemporary critical theory. It provides clear, simple explanations and concrete examples of complex concepts, making a wide variety of commonly used critical theories accessible to novices without sacrificing any theoretical rigor or thoroughness. This new edition provides in-depth coverage of the most common approaches to literary analysis today: feminism, psychoanalysis, Marxism, reader-response theory, new criticism, structuralism and semiotics, deconstruction, new historicism, cultural criticism, lesbian/gay/queer theory, African American criticism, and postcolonial criticism. The chapters provide an extended explanation of each theory, using examples from everyday life, popular culture, and literary texts; a list of specific questions critics who use that theory ask about literary texts; an interpretation of F. Scott Fitzgerald's *The Great Gatsby* through the lens of each theory; a list of questions for further practice to guide readers in applying each theory to different literary works; and a bibliography of primary and secondary works for further reading.

Narrative Mechanics Beat Suter, René Bauer, Mela Kocher, 2021-05-31 What do stories in games have in common with political narratives? This book identifies narrative strategies as mechanisms for meaning and manipulation in games and real life. It shows that the narrative mechanics so clearly identifiable in games are increasingly used (and abused) in politics and social life. They have »many faces«, displays and interfaces. They occur as texts, recipes, stories, dramas in three acts, movies, videos, tweets, journeys of heroes, but also as rewarding stories in games and as narratives in society - such as a career from rags to riches, the concept of modernity or market economy. Below their surface, however, narrative mechanics are a particular type of motivational design - of game mechanics.

Modeling Creativity Tom De Smedt, 2013-02-01 Modeling Creativity (doctoral thesis, 2013) explores how creativity can be represented using computational approaches. Our aim is to construct computer models that exhibit creativity in an artistic context, that is, that are capable of generating or evaluating an artwork (visual or linguistic), an interesting new idea, a subjective opinion. The research was conducted in 2008–2012 at the Computational Linguistics Research Group (CLiPS, University of Antwerp) under the

supervision of Prof. Walter Daelemans. Prior research was also conducted at the Experimental Media Research Group (EMRG, St. Lucas University College of Art & Design Antwerp) under the supervision of Lucas Nijs. Modeling Creativity examines creativity in a number of different perspectives: from its origins in nature, which is essentially blind, to humans and machines, and from generating creative ideas to evaluating and learning their novelty and usefulness. We will use a hands-on approach with case studies and examples in the Python programming language.
