Canine Epilepsy & Seizures James Belan,2018-08-30 Seizures are one of the most common neurological conditions in dogs. The scientific term for seizure is “ictus.” A seizure may also be called a convulsion, attack, or fit and is a temporary involuntary disturbance of normal brain function that is usually accompanied by uncontrollable muscle activity. They occur when too much electrical activity is going on in the outer layers of a dog’s brain called the cortex, which is responsible for thought, memory, sensation, and movement. Seizures are the result of muscle responses to an abnormal nerve-signal burst from the brain. They are symptoms of an underlying neurological dysfunction. Toxic substances and metabolic or electrolyte abnormalities and/or imbalances cause an uncoordinated firing of neurons in the cerebrum of the brain, creating seizures from mild petit mals to severe grand mals.

*My dog has epilepsy ...* Gill Carrick,2015-04-27 Just like humans, dogs can suffer from epilepsy. It’s often described as an ‘electrical storm’ in the brain, when millions of nerve cells fire together resulting in a seizure. These fits can vary from mild to severe, and can be dangerous for the dog and distressing for the owner to witness. Thankfully, there’s a lot that can be done to help dogs with the disease live a full and happy life. Whether your dog has just been diagnosed with epilepsy, or has lived with the condition for some time, *My Dog has Epilepsy ... but lives life to the full* provides the answers to the questions that you’re likely to have about this disease – and shows the way forward. Packed with practical advice and input from leading neurological vets, this guide is an invaluable companion for owners, with chapters on the different types of seizures; why they happen; the signs to look out for; how to protect your dog from injury during convulsions; the importance of the right diagnosis; treatment options; the role of diet and exercise; and quality of life issues.

*Canine Epilepsy Journal: Keep a Log of Your Dog's Seizures, Medications, Triggers & Side Effects* Medjournal Essentials,2019-02-16 As the owner of a dog with epilepsy you face many challenges, one of which is keeping track of seizures, medications and side effects. This journal will help you keep that information together in one place. The records you keep will help you and your vet to reach decisions about treatment and help you see if treatments are effective. This journal is easy to use, and you can bring it to consultations with your vet. Year to View Calendar - Makes it easy to see frequency and note changes over time. Medication History - Track your dog's medications, dose changes and side effects. Seizure Log - Record what happens before, during and after a seizure. Easy for family members, dog sitters or kennels to update. Track patterns and frequency on the calendar pages. Keep a detailed history of medications, dose changes and side effects. Look for triggers and warning signs. Track how medication or changes you make impact your dog's condition. Tick box format makes it quick and easy to record triggers. Written in plain English - easy for anyone to update and understand including those who may not be familiar with medical terminology. Undated so you can start any time. Calendar covers four years allowing plenty of space to add historical data if you choose. Section for questions to ask your vet. Space for your notes and observations

on the seizure log pages. Why Is It Important to Keep a Seizure Log? There are several important reasons for keeping a seizure diary - to aid in diagnosis, to help you and your vet to make decisions about treatment, and to help you spot patterns and triggers. Diagnosis & Treatment Decisions Writing down what happens before, during and after a seizure can help your vet identify the type of seizures that your dog is experiencing. This is important because some medications are more effective for certain types of seizures. Keeping a record also helps you and your vet decide whether medications are effective or need changing. If seizures get better, stay the same, or get worse after a medication change everyone needs to know. A log will also help you track side effects from medications that you give your dog. All this information helps you and your vet make informed decisions about treatment. This journal allows you to keep all your notes and questions together and to share them when you take your dog to appointments. Patterns & Triggers Writing down the time, where your dog was and what was going on prior to a seizure may help you spot patterns and identify potential triggers. Some common triggers are listed on the seizure record pages as tick box options, and there are spaces to record your own. There is also a notes section for your own thoughts and observations. Identifying triggers could help you make changes that may help your dog. Keeping records will also help you see if any changes you introduce are making a difference. Make record keeping one less thing to worry about by keeping all your dog's information together in a journal specifically designed for epilepsy management.

**Canine Epilepsy** Caroline D. Levin, 2002 Takes a close look at the most common neurological disorder diagnosed in dogs. It discusses traditional medical treatments, as well as various alternative therapies.

**CBD Oil for Dog Seizure and Epilepsy** John Leggette M D, 2018-09-30 Many of us know that medical marijuana can help millions of patients suffering from a variety of diseases and ailments, especially epileptic seizures. Strains and concentrates that are high in CBD are increasingly being used to reduce or manage the number of debilitating seizures that plague sufferers of epilepsy and Dravet's syndrome. But human beings may not be the only ones who benefit from cannabinoid therapy: pets are starting to receive high CBD treatment, too. An estimated 1-5% of all dogs can suffer from either symptomatic or idiopathic seizures. Symptomatic seizures are typically caused by abnormalities that exist inside or outside of the brain (e.g., encephalitis, head trauma, metabolic health problems, lead poisoning). Idiopathic epilepsy, however, has no underlying cause and may be genetic. Breeds that are prone to inherit symptomatic seizures include beagles, German shepherds, Keeshonds, Belgian shepherds, dachshunds, Hungarian Vizslas, English springer spaniels, Irish wolfhounds, collies, and border dogs. Additional breeds can have a high incidence of seizure disorders, namely golden retrievers, Irish setters, Saint Bernards, American cocker spaniels, wirehaired fox terriers, Alaskan malamutes, Siberian huskies, Welsh springer spaniels, Labrador retrievers, miniature schnauzers, mastiffs, boxers, Cavalier King Charles spaniels, and poodles. Dogs that suffer from epileptic seizures are commonly prescribed phenobarbital, a medication commonly used to treat seizures. While it's recommended by the World Health Organization to treat certain types of epilepsy in developing countries, it can carry some serious side effects in both humans and pets, including lethargy, increased appetite, dizziness, confusion, and long-term liver damage. This book is going to guide you on the following What is cbd oil What dog seizure and epilepsy The dosage, recommendation and side effect of using cbd oil for dog How to purchase and the cbd in market for dog seizure
