Case Studies in Public Health Preparedness and Response to Disasters Linda Y Landesman, Isaac B. Weisfuse, 2013-08-02 From extreme weather events such as Superstorm Sandy, man-made tragedies like the Madrid train bombings, the threat of bioterrorism, and emerging infections such as the H1N1 pandemic flu, disasters are creating increasingly profound threats to health of populations around the globe. Through a presentation of 16 case studies of events from natural disasters to pandemic infection, the authors examine the broad range of public health scenarios through the lens of emergency preparedness and planning. This text demonstrates the application of public health preparedness competencies established by the Association of Schools of Public Health (ASPH). It is designed for students across a wide spectrum of health and safety disciplines, and makes an ideal complement to any text on disaster preparedness or public health leadership, or can be used as a standalone text. --

A Special Breed of Miner, 1992

The 33 Jonathan Franklin, 2011 On 12 October 2010 the world's attention was fixed on a remote copper mine in the Atacama desert in Chile. Final preparations were underway for a daring rescue to bring to an end the longest underground entrapment in human history. 69 days earlier, 33 men were midway through a routine shift, deep in the San Jose mine. They stopped for their lunch break at the tiny safety shelter, 688 meters below the surface. Ten minutes later they heard an almighty crack and a deep rumbling sound. Clouds of dust and debris poured down on the choking men. The bombardment lasted for five hours. When it finally cleared the men began to explore the 6km of underground tunnels, caves and

dead ends - only to discover they were trapped under tonnes of collapsed rock. They survived on the most meagre of rations believing an attempt to rescue them was underway: a spoonful of tuna fish and a half glass of milk every 48 hours. But as days turned to weeks, hope began to fade and as starvation set in, they prepared for a slow and agonizing death. 17 days after the collapse a drill finally reached them, they sent a note back to the surface: 'all 33 of us are well inside the shelter'. Now a 700 meter-long tunnel, the width of an orange, connected them to the surface. Above ground at 'Camp Hope' the rescue team now included hundreds of geologists, engineers, psychologists, as well as the families of the men. Three separate rescue missions were launched, but hit one setback after another. 10 weeks after the collapse, and with the world watching, all 33 men would be brought safely to the surface. The 33 is the remarkable story of their 10-week incarceration, half a mile below the surface - and the epic rescue mission which finally brought them back to life.

All Nine Alive! Pittsburgh Post-Gazette Staff,Pittsburgh Post-Gazzette,2002 For five days in July 2002, the world's attention was focused on the fate of nine coal miners trapped 245 feet underground in western Pennsylvania, not 13 miles from the horrific end of September 11's Flight 93. Seven hours into their afternoon shift, a machine they were operating suddenly broke through a wall, unleashing a torrent of water from an adjacent abandoned mine. With the miners out of sight and the aboveground heroics largely shielded from view, the drama that captured the public imagination was far from complete. Their desperate

struggle to survive as the water continued its inexorable rise was played out in cramped darkness. The final, heart-stopping moments provided the storybook ending, but the real story was yet to be told--until now. The miners are home, the rescuers are back at their day jobs, investigations have begun, and, as the story inside All Nine Alive reveals, what really happened in those desperate hours was more breathtaking than we knew.

Third Mine-rescue Maneuvers at Globe, Arizona F. C. Gregory, 1924

Central Mine Rescue Station, Globe-Miami District, Mine Rescue and First-aid Association, Globe Ariz L. A. Van Fleet, Allen D. Look, 1950 The ever-present danger of mine fires and the possibility of hazardous atmospheric conditions in underground mines make a

well-equipped mine rescue station a valuable asset to any mining district. Rescue equipment without proper maintenance provides only false security, because neglect may make apparatus unfit for use in an emergency. Promptness in fighting mine fires is important; frequently the first 30 minutes of action are worth many hours later. Likewise, the equipment will be of little value if enough men trained in its use are not readily available. This circular points out how such protection has been provided in an Arizona mining district by establishing a well-organized, adequately equipped, central mine rescue station.
