Find cell phones' area online by cell tower triangulation utilizing LAC (Location Area Code) and Celled from PC, iphone or Androide phone. Cell tower triangulation utilizes the LAC and Cellid to focus the position of a cellular smartphone. With information from no less than three cell towers, this strategy can ascertain a handset's area exactly. Each one base station covers a certain region, the more cell towers in your general vicinity, the more precise result it delivers. So the thickness of cell towers decides the precision. For the most part, the thickness is higher in the urban zones particularly at downtown. While in country territories, where there are less cell towers, the result is less precise. **Priests of Our Democracy** Marjorie Heins,2013-02-04 In the early 1950s, New York City's teachers and professors became the targets of massive investigations into their political beliefs and associations. Those who refused to cooperate in the questioning were fired. Some had undoubtedly been communists, and the Communist Party-USA certainly made its share of mistakes, but there was never evidence that the accused teachers had abused their trust. Some were among the most brilliant, popular, and dedicated educators in the city. Priests of Our Democracy tells of the teachers and professors who resisted the witch hunt, those who collaborated, and those whose battles led to landmark Supreme Court decisions. It traces the political fortunes of academic freedom beginning in the late 19th century, both on campus and in the courts. Combining political and legal history with wrenching personal stories, the book details how the anti-communist excesses of the 1950s inspired the Supreme Court to recognize the vital role of teachers and professors in American democracy. The crushing of dissent in the 1950s impoverished political discourse in ways that are still being felt, and First Amendment academic freedom, a product of that period, is in peril today. In compelling terms, this book shows why the issue should matter to every American.

**Habeas Data** Cyrus Farivar,2018-05-08 A book about what the Cambridge Analytica scandal shows: That surveillance and data privacy is every citizens' concern An important look at how 50 years of American privacy law is inadequate for the today's surveillance technology, from acclaimed Ars Technica senior business editor Cyrus Farivar. Until the 21st century, most of our activities were private by default, public only through effort; today anything that touches digital space has the potential (and likelihood) to remain somewhere online forever. That means all of the technologies that have made our lives easier, faster, better, and/or more efficient have also simultaneously made it easier to keep an eye on our activities. Or, as we recently learned from reports about Cambridge Analytica, our data might be turned into a propaganda machine against us. In 10 crucial legal cases, Habeas Data explores the tools of surveillance that exist today, how they work, and what the implications are for the future of privacy.

**How to Break Up with Your Phone** Catherine Price,2018-02-13 Packed with tested strategies and practical tips, this book is the essential, life-changing guide for everyone who owns a smartphone. Is your phone the first thing you reach for in the morning and the last thing you touch before bed? Do you frequently pick it up "just to check," only to look up forty-five minutes later wondering where the time has gone? Do you say you want to spend less time on your phone—but have no idea how to do so without giving it up completely? If so, this book is your solution. Award-winning journalist Catherine Price presents a practical, hands-on plan to break up—and then make up—with your phone. The goal? A long-term relationship that actually feels good. You'll discover how phones and apps are designed to be addictive, and learn how the time we spend on them damages our abilities to focus, think deeply, and form new memories. You'll then make customized changes to your settings, apps, environment, and mindset that will ultimately enable you to take back control of your life.

**Urbanism on Track** J. van Schaick,S.C. van der Spek,2008-10-27 Tracking technologies such as GPS, mobile phone tracing, video and RFID monitoring are rapidly becoming part of daily life. Technological progress offers huge possibilities for studying human activity patterns in time and space in new ways. Delft University of Technology (TU Delft) held an international expert meeting in early 2007 to investigate the current and future possibilities and limitations of the application of tracking technologies in urban design and spatial planning. This book is the result of that expert meeting. Urbanism on Track introduces the reader to the basics of tracking research and provides insight into its advantages above other research techniques. But it also shows the bottlenecks in gathering and processing data and applying research results to real-life problems. Urbanism on Track showcases tracking experiments in urban studies, planning and design - from pedestrian navigation in Austria to Danish field tests, from TU Delft's Spatial Metro project to MIT's Real Time Rome and last but not least the Sense of the City project realised in Eindhoven. Urbanism on Track discusses the relevance of tracking for policy making, the possibilities of a new cartography and the implementation of tracking technologies in urban design and planning. This makes Urbanism on Track a unique book, setting the agenda for the structural embedment of research using tracking technologies in urbanism.

**Will Fair Use Survive? Free Expression in the Age of Copyright Control** Marjorie Heins,2005 In late 2004, the Brennan Center for Justice began a research project to learn how well fair use and free expression are faring among artists, scholars, and others who make critical contributions to culture and democratic discourse. Our discussions with members of PEN American Center, Women Make Movies, the College Art Association, and the Location One Gallery yielded two common themes. The first was that artists and scholars have great interest in, and confusion about, fair use. The second was a need for community support and pro bono legal assistance in their dealings with publishers, distributors, and other cultural gatekeepers.

**Assessing Urban Forest Effects and Values** ,2007 An analysis of trees in New York City reveals that this city has about 5.2 million trees with canopies that cover 20.9 percent of the area. The most common tree species are tree of heaven, black cherry, and sweetgum. The urban forest currently stores about 1.35 million tons of carbon valued at \$24.9 million. In addition, these trees remove about 42,300 tons of carbon per year (\$779,000 per year) and about 2,202 tons of air pollution per year (\$10.6 million per year). The structural, or compensatory, value is estimated at \$5.2 billion. Information on the structure and functions of the urban forest can be used to improve and augment support for urban forest management programs and to integrate urban forests within plans to improve environmental quality in the New York City area.
