Digital Data Collection and Information Privacy Law Mark Burdon,2020-04-23 In Digital Data Collection and Information Privacy Law, Mark Burdon argues for the reformulation of information privacy law to regulate new power consequences of ubiquitous data collection. Examining developing business models, based on collections of sensor data - with a focus on the 'smart home' - Burdon demonstrates the challenges that are arising for information privacy's control-model and its application of principled protections of personal information exchange. By reformulating information privacy's primary role of individual control as an interrupter of modulated power, Burdon provides a foundation for future law reform and calls for stronger information privacy law protections. This book should be read by anyone interested in the role of privacy in a world of ubiquitous and pervasive data collection.

Virtual Searches Christopher Slobogin,2022-10-11 A close look at innovations in policing and the law that should govern them A host of technologies—among them digital cameras, drones, facial recognition devices, night-vision binoculars, automated license plate readers, GPS,

geofencing, DNA matching, datamining, and artificial intelligence—have enabled police to carry out much of their work without leaving the office or squad car, in ways that do not easily fit the traditional physical search and seizure model envisioned by the framers of the Constitution. Virtual Searches develops a useful typology for sorting through this bewildering array of old, new, and soon-to-arrive policing techniques. It then lays out a framework for regulating their use that expands the Fourth Amendment's privacy protections without blindly imposing its warrant requirement, and that prioritizes democratic over judicial policymaking. The coherent regulatory regime developed in Virtual Searches ensures that police are held accountable for their use of technology without denying them the increased efficiency it provides in their efforts to protect the public. Whether policing agencies are pursuing an identified suspect, constructing profiles of likely perpetrators, trying to find matches with crime scene evidence, collecting data to help with these tasks, or using private companies to do so, Virtual Searches provides a template for ensuring their actions are constitutionally legitimate and responsive to the polity.

Towards a Sustainable Information Society Ewa Ziemba,2016-01-14 This book represents an important voice in the scientific discourse on what constitutes a sustainable information society, and provides a new comprehensive and forward-looking approach to such a development. This approach is based on the adoption of information and communication technologies (ICTs) by the main stakeholders of society, including individuals, enterprises, and public administration, who should use ICTs in order to build the welfare of present and future generations, ensure economic growth and socio-cultural development, increase participation in public life, permit personal development, and build the wisdom of society. As such, the book mainly focuses on the role ICTs play in transforming business, public administration and everyday life in the context of the sustainable information society. This volume will appeal to both researchers and practitioners, as it provides significant areas and directions for research on the sustainable information society, and suggests important issues for programming, building and adopting such a society. The book will allow the reader to answer such critical contemporary questions as 'What is the sustainable information society and what role is played by ICTs in this society?'; 'What are the challenges and tasks of people, enterprises, and public administration that lead towards the sustainable information society?'; 'How can ICTs support people, enterprises, and public administration in programming, building and adopting such a society?'; 'What are the factors affecting ICT adoption by people, enterprises, and public administration in this context?'; 'What are the areas that should require a primary focus in order to achieve the most satisfying results of ICT adoption by people, enterprises, and public administration?'; and 'How can ICT adoption by people, enterprises, and public administration be measured here?'

Smartland Korea Dal Yong Jin,2017-02-20 The dramatic advancement of cellphone technology has fundamentally changed our daily lives. Smartphones and their applications have created new capital for information and communication technology corporations and changed the way people communicate. Because of an interesting awareness of the significance for digital economy and people's daily culture, many countries, from the U.S. to China, have massively invested in the smartphone industries since the early 21st century. Among them, South Korea has become one of the centers for technology development and digital culture, although the country was once lagging behind in the penetration of the phones and their apps. Yet within the last few years, the country has taken a big step toward their goal of becoming a 'mobile game wonderland' by appropriating smartphones and it now exists as a curious test-bed for the future of smartphone technology. Smartland Korea, as the first attempt to comprehensively analyze mobile communication in the context of Korean smartphones, looks into a largely neglected focus of inquiry, a localized mobile landscape, with particular reference to young Koreans' engagement with their devices and applications. Dal Yong Jin focuses not only on the celebratory achievement of technological advancement, but also the significance of social milieu in the development of the smartphones. He situates the emergence of smartphones within the growth of mobile technologies and overall telecommunications industries embedded in Korea's information

and communication technologies. The book examines the technology's innovation and the evolution, the digital economy through the lens of political economy, and the youth culture embedded in the Korean smartphone context.

Fundamentals of Wearable Computers and Augmented Reality Woodrow Barfield,2015-07-29 Data will not help you if you can't see it where you need it. Or can't collect it where you need it. Upon these principles, wearable technology was born. And although smart watches and fitness trackers have become almost ubiquitous, with in-body sensors on the horizon, the future applications of wearable computers hold so much more. A trusted reference for almost 15 years, Fundamentals of Wearable Computers and Augmented Reality goes beyond smart clothing to explore user interface design issues specific to wearable tech and areas in which it can be applied. Upon its initial publication, the first edition almost instantly became a trusted reference, setting the stage for the coming decade, in which the explosion in research and applications of wearable computers and augmented reality occurred. Written by expert researchers and teachers, each chapter in the second edition has been revised and updated to reflect advances in the field and provide fundamental knowledge on each topic, solidifying the book's reputation as a valuable technical resource as well as a textbook for augmented reality and ubiquitous computing courses. New Chapters in the Second Edition Explore: Haptics Visual displays Use of augmented reality for surgery and manufacturing Technical issues of image registration and tracking Augmenting the environment with wearable audio interfaces Use of augmented reality in preserving cultural heritage Human-computer interaction and augmented reality technology Spatialized sound and augmented reality Augmented reality and robotics Computational clothing From a technology perspective, much of what is happening now with wearables and augmented reality would not have been possible even five years ago. In the fourteen years since the first edition burst on the scene, the capabilities and applications of both technologies are orders of magnitude faster, smaller, and cheaper. Yet the book's overarching mission remains the same: to supply the fundamental information and basic knowledge about the design and use of wearable computers and augmented reality with the goal of enhancing people's lives.
