»Digital Culture & Society« is a refereed, international journal, fostering discussion about the ways in which digital technologies, platforms and applications reconfigure daily lives and practices. It offers a forum for critical analysis and inquiries into digital media theory and provides a publication environment for interdisciplinary research approaches, contemporary theory developments and methodological innovation. The third issue »Politics of Big Data« edited by Mark Coté, Paolo Gerbaudo, and Jennifer Pybus, critically examines the political and economic dimensions of Big Data and thus details its contestation. The contributions focus on the materialities and processes which manifest Big Data and explore forms of value beyond the state and capital. These range from open data initiatives, social media metrics, machine learning algorithms, data visualisation to data dashboards, critical data analysis, and new modes of data action research and practice.

**Color Correction Look Book** Alexis Van Hurkman, 2013-12-12 The digital colorist's job is no longer to simply balance, fix, and optimize. Today's filmmakers often want to recreate the idiosyncrasies of older recording methods, or are looking for something completely new, to differentiate the look of a given project. Furthermore,

end-to-end digital shooting, postproduction, and distribution means that stylizations and effects once created by the film lab are no longer photochemically available. The color grading suite has become the lab, and these sorts of stylizations are now part of the colorist's job description. In this follow-up volume to the bestseller Color Correction Handbook, Alexis Van Hurkman walks you through twenty-one categories of creative grading techniques, designed to give you an arsenal of stylizations you can pull out of your hat when the client asks for something special, unexpected, and unique. Each chapter presents an in-depth examination and step-by-step, cross-platform breakdown of stylistic techniques used in music videos, commercial spots, and cinema. These customizable techniques can be mixed and matched for your own unique effects and include: • bleach bypass looks • cross-processing simulation • day-for-night treatments • emulating film stocks • flat looks • glows, blooms, and gauze looks • grain, noise, and texture • greenscreen compositing workflows • lens flaring and veiling glare • light leaks and color bleeds • monitor and screen glow • monochrome looks • sharpening • tints and color washes • undertones • vibrance and targeted saturation • and many more!
