Sport, Media and Regional Identity Simon Roberts,2015-11-25 The increasing potency of identity politics across Europe often sees sport acting as a vehicle for the promotion and celebration of regional and sub-national identities. However, while the relationship between sport, the media and national identity has featured in numerous academic and political debates in recent years, the links between sports media and regional identity have received little attention. This seems a curious oversight, because the links between sport and region frequently become a celebration of the local and the distinctive, emblematic of community and continuity. This volume will explore that sense of the counter-hegemonic, where sport is celebrated by a media often keen to promote notions of difference, which might verge on rebellion in some contexts, conceived as resisting global homogeneity or national hegemony. At other times, they may merely reflect a commercial nose for the local audience's tastes, but there is always the sense of preserving something important, a celebration of the diversity that makes us human. This book considers the centrality and cultural significance of particular sports, or clubs, to regional and sub-national identities across Europe and beyond, adopting a comparative approach to the mediatized nature of such portrayals.

Photography and Place Donna West Brett,2015-12-07 As a recording device, photography plays a unique role in how we remember places and events that happened there. This includes recording events as they happen, or recording places where something occurred before the photograph was taken, commonly referred to as aftermath photography. This book presents a theoretical and historical analysis of German photography of place after 1945. It analyses how major historical ruptures in twentieth-century Germany and associated places of trauma, memory and history affected the visual field and the circumstances of looking. These ruptures are used to generate a new reading of postwar German photography of place. The analysis includes original research on world-renowned German photographers such as Thomas Struth, Thomas Demand, Michael Schmidt, Boris Becker and Thomas Ruff as well as photographers largely unknown in the Anglophone world.

Biological Electron Microscopy Michael J. Dykstra,Laura E. Reuss,2003-12-31 Electron microscopy is frequently portrayed as a discipline that stands alone, separated from molecular biology, light microscopy, physiology, and biochemistry, among other disciplines. It is also presented as a technically demanding discipline operating largely in the sphere of black boxes and governed by many absolute laws of procedure. At the introductory level, this portrayal does the discipline and the student a disservice. The instrumentation we use is complex, but ultimately understandable and, more importantly, repairable. The procedures we employ for preparing tissues and cells are not totally understood, but enough information is available to allow investigators to make reasonable choices concerning the best techniques to apply to their particular problems. There are countless specialized techniques in the field of electron and light microscopy that require the acquisition of specialized knowledge, particularly for interpretation of results (electron tomography and energy dispersive spectroscopy immediately come to mind), but most laboratories possessing the equipment to effect these approaches have specialists to help the casual user. The advent of computer operated electron microscopes has also broadened access to these instruments, allowing users with little technical knowledge about electron microscope design to quickly become operators. This has been a welcome advance, because earlier instruments required a level of knowledge about electron optics and vacuum systems to produce optimal photographs and to avoid crashing the instruments that typically made it difficult for beginners.

CLANDESTINE PHOTOGRAPHY Raymond P. Siljander,Lance W. Juusola,2012-04-01 This book explains how to take surreptitious photographs and record video of people and property in a safe and effective manner while producing excellent results. It is the most comprehensive text on clandestine photography available. It takes the reader through conventional as well as the most sophisticated clandestine photography methods in practice today, and it covers the use of all types of equipment ranging from off-the-shelf to the most high-tech equipment available. The ultra-long-range night vision photography methods discussed in this book were devised by the authors and only exist here. Readers will discover esoteric techniques for photographically recording recognizable human and vehicle plate images from distances of over a mile in both daylight and night conditions. Myriad methods for secretly photographing people and property under diverse and difficult conditions are presented. Readers will discover innovative applications of combinations of old and new photographic-related technologies—some combined in unexpected ways that produce surprising results. It is written and extremely well illustrated in an easy to understand style for all photographers regardless of skill level. The book is appropriate for anyone in law enforcement, military operations, and private investigation. It will also benefit government surveillance specialists and those responsible for detecting and thwarting manual clandestine photography.
