Control of Multiple Robots Using Vision Sensors

Miguel Aranda, Gonzalo López-Nicolás, Carlos

Sagüés, 2017-05-11 This monograph introduces novel methods for the control and navigation of mobile robots using multiple-1-d-view models obtained from omni-directional cameras. This approach overcomes field-of-view and robustness limitations, simultaneously enhancing accuracy and simplifying application on real platforms. The authors also address coordinated motion tasks for multiple robots, exploring different system architectures, particularly the use of multiple aerial cameras in driving robot formations on the ground. Again, this has benefits of simplicity, scalability and flexibility. Coverage includes details of: a method for visual robot homing based on a memory of omni-directional images; a novel vision-based pose stabilization methodology for non-holonomic ground robots based on sinusoidal-varying control inputs; an algorithm to recover a generic motion between two 1-d views and which does not require a third view; a novel multi-robot setup where multiple camera-carrying unmanned aerial vehicles are used to observe and control a formation of ground mobile robots; and three coordinate-free methods for decentralized mobile robot formation stabilization. The performance of the different methods is evaluated both in simulation and experimentally with real robotic platforms and vision sensors. Control of Multiple Robots Using Vision Sensors will serve both academic researchers studying visual control of single and multiple robots and robotics engineers seeking to design control systems based on visual sensors.

Magnetic Resonance Spectroscopy of

Degenerative Brain Diseases Gülin Öz,2016-07-27 The proposed book will act as a guide for scientists and clinicians to the unique information that MRS can provide. It will be a comprehensive overview of clinical and pre-clinical MRS applications and potential clinical utility of MRS biomarkers in degenerative brain diseases from leading experts in the field. MRS has proven to be a powerful complementary tool to MRI for the diagnosis and monitoring of disease progression and response to treatment because it can detect changes in cell density, cell type, and biochemical composition, not just structural changes. As the population in the developed world continues to age, neuroimaging for diagnosis, prognosis, and therapy monitoring of neurodegenerative diseases becomes increasingly important and there has been a recent surge of clinical and pre-clinical applications of MRS indicating that this technique can provide robust and non-invasive biomarkers of degeneration.

Raspberry Pi and Visual Basic Carl

Shackelford,2018-02-28 Foreword by the Author I had not worked with the Raspberry Pi very long when I realized how much fun it could be. Like most, I started with Python, used Scratch, and some of the music software on Raspbian (default operating system for the Raspberry Pi). After a few successful projects, I grew tired of Python and the limitations of the GUI in Tkinter. I do not mean knock Python, and I just wanted to try something different. It was just too long of a learning curve for the GUI language part. I felt Visual Basic (VB) might prove to be more efficient and faster for my projects. Being an old Visual Basic guy, and having interest in the electronics and other aspects of the Pi, I wanted quicker results. I started out trying to learn C Sharp better, and I probably spend more time there in the future, but again it was taking too long to learn. I wanted to utilize some of the existing knowledge I had in Visual Basic, if possible. I found some information was on the internet, but it is all over the place for the Pi and Windows 10 IoT (Internet of Things). After doing a few weeks of research, I decided to use Visual Basic in Visual Studio Community

2017. I wanted to see how feasible VB still is for the Raspberry Pi and Windows 10 IoT. I picked a project to develop in Visual Basic and utilized the Pi Foundations 7 Raspberry touchscreen. This screen allowed me to keep my PC screens for work. After more research and coding, I found out my project was viable and perfect for Visual Basic. I created a speech timer application for my local Toastmasters club and presented it at one of the meetings. It worked well. I wanted to provide information to interest a novice to learn more, and possibly provide something a veteran could use to get past any hurdles they might have with the Pi and Visual Basic. This book is meant to help both. I carefully chose the projects that presented in the book. I have basic examples of Visual Basic's buttons, textboxes, progress bars, textblocks, file access, and even some SQL Server examples. I could have gone a lot deeper in electronics, but did not. The Pi has a GPIO-General Purpose Input Output or electronics capability. Instead, I choose to just scratch the surface in electronics and cover what might make people interested in the Pi. Visual Basic does work with the Pi, and it works well for Windows 10 IoT programming. It is too bad Xamarin and Visual Studio Community did not provide the ability to use Visual Basic for Android and IOS. I programmed Android with Android Studio instead of Visual Studio since it only works in C sharp using Xamarin. You must learn Java, and that was the bulk of the code required. I hope you enjoy using this book and the samples in Visual Basic and the Raspberry Pi.

Clinical Application of Neuropsychological Test Batteries

Charles J. Golden, Gerald Goldstein, Theresa M.

Incagnoli, 2013-11-11 Clinical neuropsychology has become a field of major prominence during the past several years, as well as a field of great complexity. As a result of the extensive amount of activity that neuropsychology has experienced recently, two major developments have emerged. First, several approaches have evolved regarding comprehensive neuropsychological assessment. There are presently several standard test batteries in common use, as well as an approach to assessment that does not make use of standard batteries, but rather fits the evaluation accomplished to the particular diagnostic problems presented by the individual patient. Second, a great deal of specialization has emerged, with assessment procedures developed for evaluation of specific types of neuropsychological deficit. The purpose of this volume is to review these developments, particularly with reference to their implications for application in clinical settings. The history of this book's development is of particular interest. Some years ago, the Veterans Administration became concerned with developing an optimal method of neuropsychological assessment for its many health-care

related facilities. Initially, the problem was conceptualized in terms of whether the VA should encourage wider use of the long-established Halstead-Reitan Neuropsychological Test Battery (HRB) or promote more extensive use of the recently developed Luria Nebraska Neuropsychological Test Battery (LNNB). A conference was funded to bring together authorities in clinical neuropsychology to discuss this matter and present a series of papers to invited psychologists from various VA facilities.
