*Those We Forget* David Noonan,2014-05-01 The official Australian casualty statistics suffered by the men of the Australian Imperial Force in the First World War are seriously wrong, with significant inaccuracies and omissions. Groundbreaking research exhaustively examining over 12,000 individual soldiers' records has revealed that hospitalisations for wounding, illness and injury suffered by men of the AIF are five times greater than officially acknowledged today. Why has it taken nearly one hundred years for this to come to light? Was it a conspiracy to suppress the toll, incompetence of Australia's official war historians Bean and Butler, or was it simply the unquestioning acceptance of the official record? You are invited on the journey in this book to find the truth. The findings are startling and will rewrite Australia's casualty statistics of the First World War. Lest we forget.

Hansell,2008-04 In an effort to better understand the effect of methamphetamine (meth) abuse in America, the National Association of Counties conducted two national surveys in late 2005 to gauge the impact on health services. The results of these two surveys show that the meth epidemic has a broad impact on county provided services & continues to devastate America's communities. Two key results support these conclusions. The first survey showed that there are more meth-related emergency room visits than for any other drug. The second survey showed that the need for treatment programs for meth addiction is growing dramatically. Illustrations.
