Nitrogen Use Efficiency in Plants Vanitha Jain,2011-01-01 Nitrogen fertilizers are necessary to enhance agricultural production and to sustain food security. However, their inefficient use accrues from inherent limitations of the crop plants as well as the manner in which N fertilizers are formulated, applied and managed. The main aim of the book is to assess the various aspects of the fate of fertilizer N in context of the overall N inputs to agricultural systems, with a view to enhance the efficiency of nitrogen use and reduce the negative impacts on environment. The cross cutting issues relate to improvement in nitrogen use by emerging technologies (genetic enhancement, QTL mapping), meeting N needs by understanding its interactions with other nutrients, and mitigation of nitrogen losses caused by environmental factors and management practices. Nitrogen Use Efficiency in Plants develops links between basic and applied research and practical crop production by addressing a wide range of topics relating to nitrogen use efficiency, and to plant and crop responses to applications of nitrogen via fertilizers, including nitrogen acquisition and reduction, molecular approaches, nitrate induction and signaling; and nitrogen use under abiotic stresses. Nitrogen Use Efficiency in Plants is an invaluable classroom aid for academics working in plant physiology, biochemistry, biotechnology, molecular breeding and agronomy, and an essential professional resource for researchers working in plant and crop systems as it provides a comprehensive, interdisciplinary description of problems related to the efficient use of nitrogen in agriculture.

Liveable Cities Chris Gossop,Shi Nan,2011 This book is about the unprecedented challenges facing the world's cities as they expand and develop in response to demographic change, human aspirations and the forces of globalization. Most of that growth is taking place in the developing countries and it is here that the megacities (places with over ten million people) seem destined to emerge during the next few decades. While there are considerable variations in the rates of city expansion between and within the different world regions, much of that growth has taken place as formless urban sprawl, as well as the slums and squatter settlements to be found in many of the world's cities. These urbanizing areas face acute economic, social and environmental problems. They stem from, amongst other things, fundamental changes in the nature of work, the economic crisis that began in 2008, the continuing, and often growing, inequalities within the urban population and from the severe pollution and hazardous living conditions that a that afflict many urban communities. Without suitable action to address them, those problems are likely to worsen as the effects of human induced climate change become ever more apparent. So how can our cities become truly liveable places? Published in tandem with ISOCARP's 47th World Congress held in Wuhan, China, the many case studies in this publication describe new planning and other approaches that seek to create more sustainable, more liveable, cities.
