Downright Filthy Pitching Book 2 Perry Husband, 2007-02-07

Downright Filthy Pitching Book 2 - Hitters' Attention is the second book of the Downright Filthy Pitching Series, describing the incredible discovery of the science of Effective Velocity. Every hitter that ever stepped into a batters box is limited by the human condition. A fastball at the Major League level at 95 MPH travels to home plate in under .395 seconds. The average MLB hitter takes about 1/3 of that time or about .13 to .15 seconds to swing the bat, leaving only .267 seconds to see, identify the direction, identify the spin, which leads to identifying the pitch type, which leads to identifying the true reactionary speed of the pitch and finally to the decision to swing or not. When you factor in the time it takes for the brain to process the 2-5 possible pitch choices it could be, needless to say hitters are at a massive disadvantage. Couple all of this with the fact that Ev efficient pitchers hide the identity of pitches even further by what they learned in Book 1 about Ev Tunnels. This refers to the fastball and the off speed pitches being in the same vertical and horizontal planes for 1/3 to 1/2 of the way to the plate. It is all but impossible for hitters to accomplish all of this and maintain their optimum swing mechanics. Of course hitters

can 'make contact' with elite offerings but their production goes down dramatically. After testing hitter's reactionary abilities for many years, Inside Edge, the first data collection service for MLB teams, opened their database to see if the same things were happening at the highest levels. The statistics backed the findings in the reactionary tests at every point. Hitters' Attention is very real and very misunderstood. Let's shed some light on that subject and 'Get Downright Filthy.' Perry Husband

Stars Above, Earth Below Tyler Nordgren, 2011-01-28 Stars Above, Earth Below uses photographs and sky charts to form a connection between what is seen on the ground and in the sky, and looks at the deeper scientific meaning behind these sights. Nordgren describes other objects in the Solar System with features similar to those on Earth and links the geological features seen in the national parks to the very latest NASA spacecraft discoveries on other planets and their moons. Additionally, historical context is discussed to show why we humans (who have lived in and around our national parks for tens of thousands of years) have always been astronomers. The first book to make direct connections between astronomy and the landscapes, processes and cultures one experiences in the US National Parks Each chapter ties a

specific astronomical phenomenon to a particular National Park or type of park and concludes with a “See for yourself” section that shows you how to see the planets, stars, nebulae, moons, etc. that are described within that chapter A personal guide showing the reader the astronomical phenomena that you can see for yourself when visiting the U.S. National Parks

Flight Evaluation of Various Phugoid Dynamics and 1/Th Values for the Landing-approach Task Charles R. Chalk,1966

Longitudinal handling qualities in the landing approach are studied. The T-33 variable stability and variable drag airplane was used in a flight program to evaluate various short period dynamics, phugoid dynamics, drag characteristics and elevator control authority levels. The first phase of the flight program was directed mainly at longitudinal short period dynamics, drag variation with angle of attack and elevator control authority. The second phase of the flight program was directed at phugoid dynamics, short period frequency, elevator control authority and drag characteristics. Drag variations with angle of attack, airspeed and elevator deflection were considered. Pilot ratings and comments are related to the airplane characteristics tests.
