The Mansion of Happiness Jill Lepore, 2013-03-26 Renowned Harvard scholar and New Yorker staff writer Jill Lepore has written a strikingly original, ingeniously conceived, and beautifully crafted history of American ideas about life and death from before the cradle to beyond the grave. How does life begin? What does it mean? What happens when we die? “All anyone can do is ask,” Lepore writes. “That’s why any history of ideas about life and death has to be, like this book, a history of curiosity.” Lepore starts that history with the story of a seventeenth-century Englishman who had the idea that all life begins with an egg, and ends it with an American who, in the 1970s, began freezing the dead. In between, life got longer, the stages of life multiplied, and matters of life and death moved from the library to the laboratory, from the humanities to the sciences. Lately, debates about life and death have determined the course of American politics. Each of these debates has a history. Investigating the surprising origins of the stuff of everyday life—from board games to breast pumps—Lepore argues that the age of discovery, Darwin, and the Space Age turned ideas about life on earth topsy-turvy. “New worlds were

found,” she writes, and “old paradises were lost.” As much a meditation on the present as an excavation of the past, The Mansion of Happiness is delightful, learned, and altogether beguiling.

The Logic Model Guidebook Lisa Wyatt Knowlton, Cynthia C.

Phillips, 2012-08-24 The Logic Model Guidebook offers clear, step-by-step support for creating logic models and the modeling process in a range of contexts. Lisa Wyatt Knowlton and Cynthia C. Phillips describe the structures, processes, and language of logic models as a robust tool to improve the design, development, and implementation of program and organization change efforts. The text is enhanced by numerous visual learning guides (sample models, checklists, exercises, worksheets) and many new case examples. The authors provide students, practitioners, and beginning researchers with practical support to develop and improve models that reflect knowledge, practice, and beliefs. The

Guidebook offers a range of new applied examples. The text includes logic models for evaluation, discusses archetypes, and explores display and meaning. In an important contribution to programs and organizations, it emphasizes quality by raising issues like plausibility, feasibility, and strategic choices in model creation.

Lights, Camera, Telemedicine , Lights, Camera, Telemedicine is an article written by Marilynn Larkin that originally appeared in the May-June 1997 issue of FDA Consumer, a magazine published by the U.S. Food and Drug Administration (FDA). Larkin discusses the practice of telemedicine, which involves the use of computers and telecommunication equipment to provide health care over long distances. She discusses the benefits and obstacles of telemedicine. The FDA presents the article online.

Attentional Capture Bradley S. Gibson, Charles Folk, 2019-02-04 The notion that certain mental or physical events can capture attention has been one of the most enduring topics in the study of attention owing to the importance of understanding how goal-directed and stimulus-driven processes interact in perception and cognition. Despite the clear theoretical and applied importance of attentional capture, a broad survey of this field suggests that the term capture means different things to different

people. In some cases, it refers to covert shifts of spatial attention, in others involuntary saccades, and in still others general disruption of processing by irrelevant stimuli. The properties that elicit capture can also range from abruptly onset or moving lights, to discontinuities in textures, to unexpected tones, to emotionally valenced words or pictures, to directional signs and symbols. Attentional capture has been explored in both the spatial and temporal domains as well as the visual and auditory modalities. There are also a number of different theoretical perspectives on the mechanisms underlying capture (both functional and neurophysiological) and the level of cognitive control over capture. This special issue provides a sampling of the diversity of approaches, domains, and theoretical perspectives that currently exist in the study of attentional capture. Together, these contributions should help evaluate the degree to which attentional capture represents a unitary construct that reflects fundamental theoretical principles and mechanisms of the mind.

GUI Design Shan ben tu shu,2015 As technology has rapidly advanced, so too has the way we use and interact with it. Gone are the days of flat black backgrounds dotted with blocky green text; now, users expect a massive range of colors, layouts, and

fonts to be used to entertain and assist them in their daily lives.

GUI Design assembles the best of recent graphic user interface for a collection that provides practical encouragement for those new to the world as well as inspiration for experienced designers. The book gathers Twitters Vine video creation app for Windows phones, the vulgar-yetamusing Authentic Weather app, an application designed to help tourists follow the physical and ideological path of the Iron Curtain, and more to showcase programs that balance information flow with user experiences and highlight the creativity, inspiration, and expressive techniques used in their design. The projects within demonstrate the increasingly significant role of user interfaces in both design and our everyday lives in the modern world.

Cognitive Pluralism Steven Horst,2016-06-24 An argument that we understand the world through many special-purpose mental models of different content domains, and an exploration of the philosophical implications. Philosophers have traditionally assumed that the basic units of knowledge and understanding are concepts,

beliefs, and argumentative inferences. In Cognitive Pluralism, Steven Horst proposes that another sort of unit—a mental model of a content domain—is the fundamental unit of understanding. He argues that understanding comes not in word-sized concepts, sentence-sized beliefs, or argument-sized reasoning but in the form of idealized models and in domain-sized chunks. He argues further that this idea of “cognitive pluralism”—the claim that we understand the world through many such models of a variety of content domains—sheds light on a number of problems in philosophy. Horst first presents the “standard view” of cognitive architecture assumed in mainstream epistemology, semantics, truth theory, and theory of reasoning. He then explains the notion of a mental model as an internal surrogate that mirrors features of its target domain, and puts it in the context of ideas in psychology, philosophy of science, artificial intelligence, and theoretical cognitive science. Finally, he argues that the cognitive pluralist view not only helps to explain puzzling disunities of knowledge but also raises doubts about the feasibility of attempts to “unify” the sciences; presents a model-based account of intuitive judgments; and contends that cognitive pluralism favors a reliabilist epistemology and a “molecularist” semantics. Horst suggests that cognitive pluralism

allows us to view rival epistemological and semantic theories not as direct competitors but as complementary accounts, each an idealized model of different dimensions of evaluation.

Collaborative Remembering Michelle L. Meade, Celia B.

Harris, Penny Van Bergen, John Sutton, Amanda J. Barnier, 2018 We remember in social contexts. We reminisce about the past together, collaborate to remember shared experiences, and remember in the context of our communities and cultures. This book explores the topic of 'collaborative remembering' across a wide range of fields, including developmental, cognitive, and social psychology.

Joint Models of Neural and Behavioral Data Brandon M.

Turner, Birte U. Forstmann, Mark Steyvers, 2019-01-04 This book presents a flexible Bayesian framework for combining neural and cognitive models. Traditionally, studies in cognition and cognitive sciences have been done by either observing behavior (e.g., response times, percentage correct, etc.) or by observing neural activity (e.g., the BOLD response). These two types of observations have traditionally supported two separate lines of study, which are led by two different cognitive modelers. Joining neuroimaging and computational modeling in a single hierarchical

framework allows the neural data to influence the parameters of the cognitive model and allows behavioral data to constrain the neural model. This Bayesian approach can be used to reveal interactions between behavioral and neural parameters, and ultimately, between neural activity and cognitive mechanisms. Chapters demonstrate the utility of this Bayesian model with a variety of applications, and feature a tutorial chapter where the methods can be applied to an example problem. The book also discusses other joint modeling approaches and future directions. Joint Models of Neural and Behavioral Data will be of interest to advanced graduate students and postdoctoral candidates in an academic setting as well as researchers in the fields of cognitive psychology and neuroscience.

Memory and Movies John Seamon, 2015-08-07 How popular films from Memento to Slumdog Millionaire can help us understand how memory works. In the movie Slumdog Millionaire, the childhood memories of a young game show contestant trigger his correct answers. In Memento, the amnesiac hero uses tattoos as memory aids. In Away from Her, an older woman suffering from dementia no longer remembers who her husband is. These are compelling films that tell affecting stories about the human

condition. But what can these movies teach us about memory? In this book, John Seamon shows how examining the treatment of memory in popular movies can shed new light on how human memory works. After explaining that memory is actually a diverse collection of independent systems, Seamon uses examples from movies to offer an accessible, nontechnical description of what science knows about memory function and dysfunction. In a series of lively encounters with numerous popular films, he draws on *Life of Pi* and *Avatar*, for example, to explain working memory, used for short-term retention. He describes the process of long-term memory with examples from such films as *Cast Away* and *Groundhog Day*; *The Return of Martin Guerre*, among other movies, informs his account of how we recognize people; the effect of emotion on autobiographical memory is illustrated by *The Kite Runner*, *Titanic*, and other films; movies including *Born on the Fourth of July* and *Rachel Getting Married* illustrate the complex pain of traumatic memories. Seamon shows us that movies rarely get amnesia right, often using strategically timed blows to the protagonist's head as a way to turn memory off and then on again (as in *Desperately Seeking Susan*). Finally, he uses movies including *On Golden Pond* and *Amour* to describe the memory loss

that often accompanies aging, while highlighting effective ways to maintain memory function.

Glass Boys Nicole Lundrigan, 2011-07-11 With vivid and unflinching prose, Nicole Lundrigan has created a riveting and deeply human saga of the persistence of evil and the depths and limits of love. When Roy Trench is killed in a drunken prank gone wrong, his brother Lewis sees blood on the hands of the man responsible: the abusive alcoholic, Eli Fagan. Though the courts rule the death an accident, the event opens a seam of hate between the two families of Knife's Point, Newfoundland. Desperate to smother the painful past with love, Lewis marries Wilda, and the pleasure he takes in their two children -- Melvin and Toby -- recalls the happier days of his childhood with Roy. But as he watches his small family fracture, the darkness of the past begins to cloud the present, leading Lewis back to Eli Fagan -- and his watchful stepson, Garrett Glass. In the style of Newfoundland literature, established by Michael Crummey and Lisa Moore, *Glass Boys* is the haunting story of an unforgivable crime that brings two families to the brink.

Becoming Fluent Richard Roberts, Roger Kreuz, 2017-02-03 Forget everything you've heard about adult language learning:

evidence from cognitive science and psychology prove we can learn foreign languages just as easily as children. An eye-opening study on how adult learners can master a foreign language by drawing on skills and knowledge honed over a lifetime. Adults who want to learn a foreign language are often discouraged because they believe they cannot acquire a language as easily as children. Once they begin to learn a language, adults may be further discouraged when they find the methods used to teach children don't seem to work for them. What is an adult language learner to do? In this book, Richard Roberts and Roger Kreuz draw on insights from psychology and cognitive science to show that adults can master a foreign language if they bring to bear the skills and knowledge they have honed over a lifetime. Adults shouldn't try to learn as children do; they should learn like adults. Roberts and Kreuz report evidence that adults can learn new languages even more easily than children. Children appear to have only two advantages over adults in learning a language: they acquire a native accent more easily, and they do not suffer from self-defeating anxiety about learning a language. Adults, on the other hand, have the greater advantages—gained from experience—of an understanding of their own mental processes and knowing how to

use language to do things. Adults have an especially advantageous grasp of pragmatics, the social use of language, and Roberts and Kreuz show how to leverage this metalinguistic ability in learning a new language. Learning a language takes effort. But if adult learners apply the tools acquired over a lifetime, it can be enjoyable and rewarding.

The Pragmatic Turn Andreas K. Engel, Karl J. Friston, Danica Kragic, 2022-06-07 Experts from a range of disciplines assess the foundations and implications of a novel action-oriented view of cognition. Cognitive science is experiencing a pragmatic turn away from the traditional representation-centered framework toward a view that focuses on understanding cognition as “enactive.” This enactive view holds that cognition does not produce models of the world but rather subserves action as it is grounded in sensorimotor skills. In this volume, experts from cognitive science, neuroscience, psychology, robotics, and philosophy of mind assess the foundations and implications of a novel action-oriented view of cognition. Their contributions and supporting experimental evidence show that an enactive approach to cognitive science enables strong conceptual advances, and the chapters explore key concepts for this new model of cognition. The contributors discuss

the implications of an enactive approach for cognitive development; action-oriented models of cognitive processing; action-oriented understandings of consciousness and experience; and the accompanying paradigm shifts in the fields of philosophy, brain science, robotics, and psychology. Language by mouth and by hand Iris Berent, Susan Goldin-

Meadow, 2015-05-11 While most natural languages rely on speech, humans can spontaneously generate comparable linguistic systems

that utilize manual gestures. This collection of papers examines the interaction between natural language and its phonetic vessels—human speech or manual gestures. We seek to identify what linguistic aspects are invariant across signed and spoken languages, and determine how the choice of the phonetic vessel shapes language structure, its processing and its neural implementation. We welcome rigorous empirical studies from a wide variety of perspectives, ranging from behavioral studies to brain analyses, diverse ages (from infants to adults), and multiple languages—both conventional and emerging home signs and sign languages.

Spatial Cognition III Christian Freksa, Wilfried

Brauer, Christopher Habel, Karl F. Wender, 2003-06-23 This third volume documents the results achieved within a priority program on spatial cognition funded by the German Science Foundation (DFG). The 23 revised full papers presented went through two rounds of reviewing and improvement and reflect the increased interdisciplinary cooperation in the area. The papers are organized in topical sections on routes and navigation, human memory and learning, spatial representation, and spatial reasoning.

Systems of Survival Jane Jacobs, 2016-08-17 With intelligence

and clarity of observation, the author of *The Death and Life of Great American Cities* addresses the moral values that underpin working life. In *Systems of Survival*, Jane Jacobs identifies two distinct moral syndromes—one governing commerce, the other, politics—and explores what happens when these two syndromes collide. She looks at business fraud and criminal enterprise, government's overextended subsidies to agriculture, and transit police who abuse the system they are supposed to enforce, and asks us to consider instances in which snobbery is a virtue and industry a vice. In this work of profound insight and elegance, Jacobs gives us a new way of seeing all our public transactions and encourages us towards the best use of our natural inclinations.
