*Statistical Mechanics of Membranes and Surfaces* Tsvi Piran, 2004 This invaluable book explores the delicate interplay between geometry and statistical mechanics in materials such as microemulsions, wetting and growth interfaces, bulk lyotropic liquid crystals, chalcogenide glasses and sheet polymers, using tools from the fields of polymer physics, differential geometry, field theory and critical phenomena. Several chapters have been updated relative to the classic 1989 edition. Moreover, there are now three entirely new chapters -- on effects of anisotropy and heterogeneity, on fixed connectivity membranes and on triangulated surface models of fluctuating membranes.

Statistical Mechanics Of Membranes And Surfaces - Proceedings Of The 5th Jerusalem Winter School For Theoretical Physics David Nelson, Tsvi Piran, Steven Weinberg, 1989-04-01 The School explored the delicate interplay between geometry and statistical mechanics in these materials such as microemulsions, wetting and growth interfaces, bulk lyotropic liquid crystals, chalcogenide glasses and sheet polymers, using tools from the fields of polymer physics, of differential geometry and of critical phenomena.

Nanostructures Mircea V. Diudea, 2005 Novel carbon allotropes, such as spherical fullerenes and nanotubes, have been added, in the last three decades, to the traditionally recognised diamond and graphite. Although fullerene C<sub>60</sub> has been speculated about for a long time. A fullerene is, according to a classical definition, an all-carbon molecule consisting entirely of pentagons (exactly 12) and hexagons ( $n/2 - 10$ ). Non-classical fullerene extensions to include rings of other sizes have been considered. Fullerenes are commonly synthesised by arc-discharge or laser ablation methods. Spherical fullerenes became nowadays parts of real chemistry: they can be functionalised or inserted in supramolecular assemblies.

**Statistical Mechanics of Membranes and Surfaces** D Nelson, T Piran, S Weinberg, 2004-06-14 ' This invaluable book explores the delicate interplay between geometry and statistical mechanics in materials such as microemulsions, wetting and growth interfaces, bulk lyotropic liquid crystals, chalcogenide glasses and sheet polymers, using tools from the fields of polymer physics, differential geometry, field theory and critical phenomena. Several chapters have been updated relative to the classic 1989 edition. Moreover, there are now three entirely new chapters – on effects of anisotropy and heterogeneity, on fixed connectivity membranes and on triangulated surface models of fluctuating membranes. Contents: The Statistical Mechanics of Membranes and Interfaces (D R Nelson) Interfaces: Fluctuations, Interactions and Related Transitions (M E Fisher) Equilibrium Statistical Mechanics of Fluctuating Films and Membranes (S Leibler) The Physics of Microemulsions and Amphiphilic Monolayers (D Andelman) Properties of Tethered Surfaces (Y Kantor) Theory of the Crumpling Transition (D R Nelson) Geometry and Field Theory of Random Surfaces and Membranes (F David) Statistical Mechanics of Self-Avoiding Crumpled Manifolds (B Duplantier) Anisotropic and Heterogeneous Polymerized Membranes (L Radzihovsky) Fixed-Connectivity Membranes (M J Bowick) Triangulated-Surface Models of Fluctuating Membranes (G Gompper & D M Kroll) Readership: Condensed matter physicists, biophysicists, polymer scientists and statistical mechanicians. Keywords: Reviews: "The additional chapters added for the second edition highlight some of the new results (consequences of anisotropy), and place the older contributions in better perspective (renormalizability, connections to triangulated surfaces). The revised edition will serve as an even better introduction to this interesting topic at the intersection of geometry, field theory, and polymer physics." Mehran Kardar Professor of Physics MIT "This is the book I used to get introduced into the field of the statistical mechanics of membranes and surfaces. I still use it and recommend it to my students and to anyone who is interested in this very exciting field. The different chapters describe detailed and clear mathematical developments, experimental presentations and high quality numerical work presented with superb clarity. This book, with its newest updated second edition, will remain as a reference textbook for many years to come." Alex Travesset Iowa State University and Ames Laboratory "The first edition set the field of geometry and statistical mechanics in motion. This update, with added material, will be as important to researchers in this now burgeoning field as the original edition. The collection strikes an excellent balance between pedagogical review and current results and developments. This book should be on every theorist's shelf." Professor Randall D Kamien University of Pennsylvania '

**Nanochemistry** Geoffrey A. Ozin, André C. Arsenault, Ludovico Cademartiri, 2009 The global success of the 1st edition of Nanochemistry, along with exceptionally rapid change in the field, has necessitated the publication of a 2nd edition after only three years. This truly major update highlights the latest breakthroughs using more than eighty new case histories, more problem sets, and more teaching principles. Nanotechnology is touted to begin a new era by bringing us materials that were not available before. This book describes the fascinating chemistry behind nanotechnology in a clear and easy to read style. Aimed at teachers, graduate students and advanced undergraduates it provides an authoritative, rigorous and hype-free guide to this burgeoning field. For those who already have some knowledge of the subject, the book remains invaluable as a reference and source of inspiration for future research or teaching. With a combined total of over forty years teaching and research experience, the authors are leaders in the fields of materials chemistry and nanochemistry. They have chosen to focus on concepts rather than formulas whilst describing all the techniques commonly used to synthesize nanomaterials. Problem sets are used to get students to thinking creatively and laterally about what they have learnt. The questions are designed to draw connections between subjects, fields and topics - of fundamental importance for anyone intending to work in such an interdisciplinary field. Nanochemistry is long but later chapters do not require knowledge of earlier sections so it can be read a little at a time. Reviews of the first edition stated that it is one of the most entertaining books in science, given the many figures, the variety of subjects and the well thought out structure. Suitable for those coming from a physics, biology, medicine, materials science, engineering or chemistry background, the book is ideal for whoever needs a birds-eye view of the field. The extensive bibliography allows the reader to find any level of detail behind each of the subjects. Nowhere else in the literature is it possible to find such a comprehensive and up-to-date look at the chemistry of nanotechnology.

**Advances in Computational Methods in Sciences and Engineering 2005 (2 vols)** Theodore Simos, George Maroulis, 2022-05-05 This volume brings together selected contributed papers presented at the International Conference of Computational Methods in Science and Engineering (ICCMSE 2005), held in Greece, 21 aEURO 26 October 2005. The conference aims to bring together computational scientists from several disciplines in order to share methods and ideas. The ICCMSE is unique in its kind. It regroups original contributions from all fields of the traditional Sciences, Mathematics, Physics, Chemistry, Biology, Medicine and all branches of Engineering. It would be perhaps more appropriate to define the ICCMSE as a conference on computational science and its applications to science and engineering. Topics of general interest are: Computational Mathematics, Theoretical Physics and

Theoretical Chemistry. Computational Engineering and Mechanics, Computational Biology and Medicine, Computational Geosciences and Meteorology, Computational Economics and Finance, Scientific Computation. High Performance Computing, Parallel and Distributed Computing, Visualization, Problem Solving Environments, Numerical Algorithms, Modelling and Simulation of Complex System, Web-based Simulation and Computing, Grid-based Simulation and Computing, Fuzzy Logic, Hybrid Computational Methods, Data Mining, Information Retrieval and Virtual Reality, Reliable Computing, Image Processing, Computational Science and Education etc. More than 800 extended abstracts have been submitted for consideration for presentation in ICCMSE 2005. From these 500 have been selected after international peer review by at least two independent reviewers.

**The Absolution Tap** Paul Bristol,2020-11-11 The Absolution Tap represents the journey of one man's search for clarity in mastering his lifelong, ongoing dance with depression. Via the power of resurrected faith, forgiveness, and his unique metaphorical perspective on the management and interaction of his "life tanks," author Paul Bristol has discovered the path to his "middle lane of inner peace." By breaking the destructive cycle of being comfortable with discomfort and in changing how life events are interpreted and processed, one can begin the construction of a new life narrative that lies in wait to help master, medication-free, that "dance with the ghost." "It's not about your past and the players who are riding on your "team bus," but about who you choose to put behind the wheel each and every day that determines your life course. Through faith and absolute, entrenched forgiveness, there is no obstacle that you cannot conquer" (Paul Bristol, The Absolution Tap).

**The Big Book of Gun Trivia** Gordon L. Rottman,2013-10-20 A complete guide to weapons history, facts, myths and trivia, covering everything you wanted to know, didn't want to know and you don't know you need to know... Gordon Rottman offers a step by step guide through interesting weapon facts and statistics, including a section on ammunition, while breaking apart popular myths and misconceptions. Covering subjects from weapons designations to the longest serving military rifles, where rifles get their names from and everything in between, Osprey is proud to present The Big Book of Gun Trivia.

**CUCKOO'S EGG** Clifford Stoll,2012-05-23 Before the Internet became widely known as a global tool for terrorists, one perceptive U.S. citizen recognized its ominous potential. Armed with clear evidence of computer espionage, he began a highly personal quest to expose a hidden network of spies that threatened national security. But would the authorities back him up? Cliff Stoll's dramatic firsthand account is a computer-age detective story, instantly fascinating [and] astonishingly gripping (Smithsonian). Cliff Stoll was an astronomer turned systems manager at Lawrence Berkeley Lab when a 75-cent accounting error alerted him to the presence of an unauthorized user on his system. The hacker's code name was Hunter—a mysterious invader who managed to break into U.S. computer systems and steal sensitive military and security information. Stoll began a one-man hunt of his own: spying on the spy. It was a dangerous game of deception, broken codes, satellites, and missile bases—a one-man sting operation that finally gained the attention of the CIA . . . and ultimately trapped an international spy ring fueled by cash, cocaine, and the KGB.

**Without a Prop** David S. Yetman,2010-05 Hinckley, Hunt, Little Harbor and Lyman-Morse are names that conjure up visions of sleek luxury yachts, comfortably slicing through even the roughest ocean waters. In the quest to offer the latest technology, many of their designs now feature water-jets instead of traditional propellers. But the latest thing in propulsion isn't new at all. Today's water-jets are the result of more than two centuries of trial and error, exhilarating successes and frustrating defeats experienced by a cast of inventors, entrepreneurs and adventurers who weren't afraid to lay it all on the line. They include a self-taught craftsman backed by the Founding Fathers, the engineers of the Royal Navy, a small-town Ohio genius, a New Zealand sportsman and an American industrialist. Their efforts, which ranged from back-yard tinkering to daring international expeditions contributed to the spectacular technology that now powers everything from fishing boats to frigates. The water-jet is here to stay. David S. Yetman has been a prolific, award-winning boating writer for more than 15 years. He has written four books and more than 200 articles for a broad range of boating magazines including Boating World, Motor Boating, Offshore, Power & Motoryacht, Sail, Soundings, Trailer Boats and Yachting. As a young man, he was involved in several start-up ventures in design, manufacturing and retail sales before embarking on a career in mechanical design and engineering, rising to the level of Engineering Manager for a high-technology company before retiring in 2001. He has been awarded patents for designs of a wide range of products, including motorcycle frames, laboratory apparatus and automated instruments used in DNA research, and enjoys applying his broad technical experience to boating and writing. He and his wife, Pat, live on Hodgdon Island, Maine and cruise the New England coast on CURMUDGEON, their Albin Tournament Express convertible.

**Soft Matter: a Very Short Introduction** Tom McLeish,2020-10-14 Tom McLeish delves into the growing field of soft matter - the study of materials such as polymers, colloids, liquid crystals, and foams. Looking beneath their appearance to their inner structure, he discusses their shared physical properties, the principle of Brownian Motion that underlies all soft matter, and the applications of these materials.

**Harnessing the Power of Failure** John Steven Newman,Stephen M. Wander,2018-09-13 In this book the authors employ the SFCS approach to explore a vast array of failure events in multiple sectors of transportation, industry, aerospace, construction, and critical infrastructure.

**The Spike** Damien Broderick,2002-02-09 Human life and the human condition are changing rapidly, and are about to change even faster and more radically. Dazzling scientific breakthroughs are changing how long we live, where we live, how we dress, how we communicate, how we work and what work we do, and even how we think and imagine. Scientist Vernor Vinge proposed that humanity is approaching what he called the Singularity, what Broderick has renamed the Spike: that moment in human history when heretofore unimaginable changes -- artificial intelligence, immortality, and nanotechnology, just to name a few -- occur with such rapidity and number that the human race will be transformed -- or destroyed. This book of wonders and dangers brings together all the fascinating possibilities. Don't miss Broderick's new Tor novel, Transcension, also published in February, in which one of the futures described in The Spike is the setting for a diverting entertainment. **Colin Seeley** Colin Seeley,2006 This is the first volume of the two-volume autobiography of Colin Seeley, a famed British motorcycle racer and builder. The book is full of anecdotes, escapades, personalities and memorable descriptions on and off the track which give a fantastic insight into the racing and technical achievements over three great decades in motorcycling history.

Cooperative Dynamics in Complex Physical Systems Hajime Takayama,2012-12-06 Many novel cooperative phenomena found in a variety of systems studied by scientists can be treated using the uniting principles of synergetics. Examples are frustrated and random systems, polymers, spin glasses, neural networks, chemical and biological systems, and fluids. In this book attention is focused on two main problems. First, how local, topological constraints (frustrations) can cause macroscopic cooperative behavior: related ideas initially developed for spin glasses are shown to play key roles also for optimization and the modeling of neural networks. Second, the dynamical constraints that arise from the nonlinear dynamics of the systems: the discussion covers turbulence in fluids, pattern formation, and conventional 1/f noise. The volume will be of interest to anyone wishing to understand the current development of work on complex systems, which is presently one of the most challenging subjects in statistical and condensed matter physics.
