*Molecular Physiology and Pharmacology of Cardiac Ion Channels and Transporters* M. Morad,S. Ebashi,W. Trautwein,Yoshihisa Kurachi,2012-12-06 Knowledge of cardiac ion channels and transporters has advanced remarkably in the last two decades with the development of patch-clamp and molecular biological techniques. This textbook offers a comprehensive overview of structures and functions of ion channels and transporters in the heart. Readers are first introduced to the molecular biology and electrophysiology of all the important ion channels. After discussing their developmental changes, the pharmacology and pathophysiology of clinically-relevant ion channels are reviewed. Molecular aspects of the cardiac excitation-contraction coupling and intracellular  $Ca^{2+}$  regulation by ion transporters are also described. The book will be useful to electrophysiologists, cardiac physiologists and pharmacologists, and molecular biologists interested in ion channels at all levels. For research specialists, the book will provide a perspective of the field. The book can be used as a reference source for working scientists in the fields of ion channels, biophysics, cardiac electrophysiology, and pharmacology. It is aimed at graduate and medical students, designed for use as a textbook for graduate and medical courses.

*Parasitic Substrate Coupling in High Voltage Integrated Circuits* Pietro Buccella,Camillo Stefanucci,Maher Kayal,Jean-Michel Sallese,2018-03-14 This book introduces a new approach to model and predict substrate parasitic failures in integrated circuits with standard circuit design tools. The injection of majority and minority carriers in the substrate is a recurring problem in smart power ICs containing high voltage, high current switching devices besides sensitive control, protection and signal processing circuits. The injection of parasitic charges leads to the activation of substrate bipolar transistors. This book explores how these events can be evaluated for a wide range of circuit topologies. To this purpose, new generalized devices implemented in Verilog-A are used to model the substrate with standard circuit simulators. This approach was able to predict for the first time the activation of a latch-up in real circuits through post-layout SPICE simulation analysis. Discusses substrate modeling and circuit-level simulation of parasitic bipolar device coupling effects in integrated circuits; Includes circuit back-annotation of the parasitic lateral n-p-n and vertical p-n-p bipolar transistors in the substrate; Uses Spice for simulation and characterization of parasitic bipolar transistors, latch-up of the parasitic p-n-p structure, and electrostatic discharge (ESD) protection devices; Offers design guidelines to reduce couplings by adding specific protections.

*Race, Class, and Political Symbols* Anita M. Waters,1985-01-01 Dr. Waters is one of a new breed of analysts for whom the interpenetration of politics, culture, and national development is key to a larger integration of social research. *Race, Class, and Political Symbols* is a remarkably cogent examination of the uses of Rastafarian symbols and reggae music in Jamaican electoral campaigns. The author describes and analyzes the way Jamaican politicians effectively employ improbable strategies for electoral success. She includes interviews with reggae musicians, Rastafarian leaders, government and party officials, and campaign managers. Jamaican democracy and politics are fused to its culture; hence campaign advertisements, reggae songs, party pamphlets, and other documents are part of the larger picture of Caribbean life and letters. This volume centers and comes to rest on the adoption of Rastafarian symbols in the context of Jamaica's democratic institutions, which are characterized by vigorous campaigning, electoral fraud, and gang violence. In recent national elections, such violence claimed the lives of hundreds of people. Significant issues are dealt with in this cultural setting: race differentials among Whites, Browns, and Blacks; the rise of anti-Cubanism; the Rastafarians' response to the use of their symbols; and the current status of Rastafarian ideological legitimacy.

**Women in Cytokines and Soluble Mediators in Immunity** Diana Boraschi,Giselle Penton-Rol,Marita Troye Blomberg,Olukemi Amodu,2024-02-13 We are delighted to present the inaugural *Frontiers in Immunology "Women in Cytokines and Soluble Mediators in Immunity"* series of article collections. At present, less than 30% of researchers worldwide are women. Long-standing biases and gender stereotypes are discouraging girls and women away from science-related fields, and Science, Technology, Engineering and Mathematics (STEM) research in particular. Science and gender equality are, however, essential to ensure sustainable development as highlighted by UNESCO. In order to change traditional mindsets, gender equality must be promoted, stereotypes defeated, and girls and women should be encouraged to pursue STEM careers.

*Analysis and Design of Analog Integrated Circuits* Paul R. Gray,Paul J. Hurst,Stephen H. Lewis,Robert G. Meyer,2024-01-04 ANALYSIS AND DESIGN OF ANALOG INTEGRATED CIRCUITS Authoritative and comprehensive textbook on the fundamentals of analog integrated circuits, with learning aids included throughout Written in an accessible style to ensure complex content can be appreciated by both students and professionals, this Sixth Edition of *Analysis and Design of Analog Integrated Circuits* is a highly comprehensive textbook on analog design, offering in-depth coverage of the fundamentals of circuits in a single volume. To aid in reader comprehension and retention, supplementary material includes end of chapter problems, plus a Solution Manual for instructors. In addition to the well-established concepts, this Sixth Edition introduces a new super-source follower circuit and its large-signal behavior, frequency response, stability, and noise properties. New material also introduces replica biasing, describes and analyzes two op amps with replica biasing, and provides coverage of weighted zero-value time constants as a method to estimate the

location of dominant zeros, pole-zero doublets (including their effect on settling time and three examples of circuits that create doublets), the effect of feedback on pole-zero doublets, and MOS transistor noise performance (including a thorough treatment on thermally induced gate noise). Providing complete coverage of the subject, Analysis and Design of Analog Integrated Circuits serves as a valuable reference for readers from many different types of backgrounds, including senior undergraduates and first-year graduate students in electrical and computer engineering, along with analog integrated-circuit designers.

*Principles of Radiation Interaction in Matter and Detection* Claude Leroy,Pier-Giorgio Rancoita,2011-09-23 This book, like the first and second editions, addresses the fundamental principles of interaction between radiation and matter and the principles of particle detection and detectors in a wide scope of fields, from low to high energy, including space physics and medical environment. It provides abundant information about the processes of electromagnetic and hadronic energy deposition in matter, detecting systems, performance of detectors and their optimization.The third edition includes additional material covering, for instance: mechanisms of energy loss like the inverse Compton scattering, corrections due to the Landau-Pomeranchuk-Migdal effect, an extended relativistic treatment of nucleus-nucleus screened Coulomb scattering, and transport of charged particles inside the heliosphere. Furthermore, the displacement damage (NIEL) in semiconductors has been revisited to account for recent experimental data and more comprehensive comparisons with results previously obtained.This book will be of great use to graduate students and final-year undergraduates as a reference and supplement for courses in particle, astroparticle, space physics and instrumentation. A part of the book is directed toward courses in medical physics. The book can also be used by researchers in experimental particle physics at low, medium, and high energy who are dealing with instrumentation.
