Wings of Ice Jeff Maynard,2017-05-12 A story that's waited 90 years to be told. Wings of Ice reveals the fierce rivalry between two flawed polar heroes: Sir Hubert Wilkins and Admiral Richard Byrd. It tells the story of their pioneering flights in the 1920s, while laying out clues and challenging the reader to solve an eighty-year-old mystery. On 8 May 1926 three expeditions were locked in a race to fly to the North Pole. Hubert Wilkins was at Barrow, Alaska anxiously waiting for clear weather. Richard Byrd was at Kings Bay, Spitsbergen hurriedly building a runway for his plane. Roald Amundsen was also at Kings Bay repairing his airship. Shortly after midnight Byrd flew north. He returned 15 hours later and claimed he had reached the North Pole. A year later Byrd announced his intention to be the first to fly to the South Pole. Wilkins, who had just completed a record-breaking flight in the Arctic, was hired to beat him. Six months later they unloaded their planes on opposite sides of Antarctica and prepared for the last great race in polar history. Byrd won and became an American icon. During his life no one dared question his claims. It was only after his death in 1957 that he was accused of being 'the greatest fraud in polar history'. Wilkins died in 1958 and disappeared from the history books after his jealous, secretive wife locked away his records and diaries. Factually based and methodically researched, Wings of Ice reveals what really happened on Byrd's polar flights and traces the lost records of Sir Hubert Wilkins. It brings to light an untold story of courage, daring and adventure, while exposing secrets and lies that will rewrite polar history.

Analysis of Transonic Flow about Lifting Wing-body Configurations Richard W. Barnwell,1975 An analytical solution is obtained for the perturbation velocity potential for transonic flow about lifting wing-body configurations with order-one span-length ratios and small reduced-span-length ratios and equivalent-thickness-length ratios. The analysis is performed with the method of matched asymptotic expansions. The angles of attack which are considered are small but are large enough to insure that the effects of lift in the region far from the configuration are either dominant or comparable with the effects of thickness. The modification to the equivalence rule which accounts for these lift effects is determined. An analysis of transonic flow about lifting wings with large aspect ratios is also presented.

Wings Over the Arctic Mikhail Vodopyanov,1957 Wings Over the Arctic is not only a story of arctic flights, but is actually a brief history of air conquest of the Arctic. The book tells about the tremendous work done in the Arctic by Soviet polar explorers and their contribution to the development of the countrys aviation and to cultural and economic construction in the northern regions of the Soviet Union.

Wings Around the World Polly Vacher,2008 Polly Vacher wanted to become the first pilot to complete a solo flight around the world via both Poles in a single-engine aircraft. Her 60,000 mile voyage would take her to every continent. She prepared meticulously for two years and had garnered multifarious sponsors. However, as she took off, flanked by a Hurricane and a Spitfire, and waved off by her family and the Prince of Wales, she suddenly felt so alone. She had begun a remarkable expedition that would gain her three world records, but would also see her encounter extremes of weather and emotion, kindness, obstruction and also a little political intrigue.

Investigation of the Variation of Maximum Lift for a Pitching Airplane Model and Comparison with Flight Results Paul W. Harper,Roy E. Flanigan,1948 Apparatus was developed which utilized a pitching airplane model to determine maximum wing loads as a function of the rate of change of angle of attack. In order to evaluate the pitching-model technique, the maximum lift coefficient was determined as a function of the rate of change of angle of attack over a Mach number range from approximately 0.2 to 0.6 in wind-tunnel tests of a 1/20-scale model of a conventional single-engine fighter airplane and was compared with existing flight data of this airplane. The wind-tunnel and flight results were found to be in good agreement.

Life in Moving Fluids Steven Vogel,2020-05-05 Both a landmark text and reference book, Steven Vogel's Life in Moving Fluids has also played a catalytic role in research involving the applications of fluid mechanics to biology. In this revised edition, Vogel continues to combine humor and clear explanations as he addresses biologists and general readers interested in biological fluid mechanics, offering updates on the field over the last dozen years and expanding the coverage of the biological literature. His discussion of the relationship between fluid flow and biological design now includes sections on jet propulsion, biological pumps, swimming, blood flow, and surface waves, and on acceleration reaction and Murray's law. This edition contains an extensive bibliography for readers interested in designing their own experiments.

Polar First Jennifer Murray,2009-04 In May 2007, Jennifer Murray (68) and her co-pilot Colin Bodill (57) set a new world record by becoming the first pilots to fly a round-trip from Pole to Pole - in a helicopter. From the searing heat of the Atacama desert in Peru, over the heights of the Andes and across the hostile southern oceans, to the unforgiving cold of the Antarctic and Arctic, Polar First tells the remarkable story of Murray and Bodill's journey into the record books - a journey which lasted 171 days, took in 26 different countries, and covered more than 33,000 nautical miles.

Locomotion and Energetics in Arthropods Clyde F. Herreid,2012-12-06 At the 1980 Christmas meetings of the American Society of zoologists in Seattle, Washington, the Division of Comparative Physiology and Biochemistry sponsored a symposium on the locomotion and exercise of arthropods. This book is an outgrowth of that symposium. To our knowledge, the symposium and this volume are the first attempts to deal with all of the major modes of locomotion (flight, swimming, and pedestrian travel) among the arthropods in a comprehensive fashion. The time seems propitious to focus on arthropod locomotion. In the last decade enormous strides have been made in understanding locomotion - both arthropod and vertebrate alike. There has been an explosion of new ideas, new techniques, and new data. These deserve greater attention and discussion than is possible in specialized journals. Hopefully this book will fill this gap; moreover, it should serve as a benchmark for newcomers to see what has happened to date and perhaps act as a launching pad for research to come. Whatever the case, a symposium volume such as this serves to highlight our current strengths and weaknesses. In the present case it reveals the relative abundance of information on flying and walking and the dearth of

data available on swimming; it exposes the fact that insects and crustaceans are fairly well studied and arachnids are not.

Lacrimal Gland, Tear Film, and Dry Eye Syndromes 2 David A. Sullivan,Darlene A. Dartt,Michele A. Meneray,2012-12-06 During the past two decades, a significant international research effort has been directed toward understanding the composition and regulation of the precorneal tear film. This effort has been motivated by the recognition that the tear film plays an essential role in maintaining corneal and conjunctival integrity, protecting against microbial challenge, and preserving visual acuity. In addition, research has been stimulated by the knowledge that alteration or deficiency of the tear film, which occurs in countless individuals throughout the world, may lead to desiccation of the ocular surface, ulceration and perforation of the cornea, an increased incidence of infectious disease, and, potentially, pronounced visual disability and blindness. To promote further progress in this field of vision research, the Second International Conference on the Lacrimal Gland, Tear Film and Dry Eye Syndromes: Basic Science and Clinical Relevance was held at the Southampton Princess Resort in Bermuda November 16-19, 1996. This conference was organized and directed by David A. Sullivan, Ph. D. , codirected by Darlene A. Dartt, Ph. D. , and Michele A. Meneray, Ph. D. , and sponsored by the Schepens Eye Research Institute (Boston, MA), an affiliate of Harvard Medical School. The meeting was designed to assess critically the current knowledge and state of the art research on the structure and function of lacrimal tissue, tears, and the ocular surface in both health and disease.
