Rubbish! Richard Girling,2011-06-30 We can no longer cope with our waste. Every hour in the UK we throw away enough rubbish to fill the Albert hall - a statistic quoted so often that perhaps we've stopped imagining what it means. And every year the flow accelerates. This is the story of our rubbish - from the first human bowel movement to the littering of outer space. With a hankerchief to his nose, Girling picks through our fridge mountain, our crumbling sewers, trading waste, packaging waste, hazardous industrial

waste... it is a mucky saga of carelessness, greed and opportunism, wasted opportunity and official bungling. But Rubbish! is also a plea for us to consider other kinds of waste: the trashing of our landscape, the unstoppable floods of junk that clog our mailboxes, litter the skies and foul the airwaves... Rubbish! may not be a conventional battle cry but this is unmistakably a call to arms - not just for the three 'R's - reduce, re-use, recycle - but for us to fight for new ideas, brave initiative rather than reliance on old systems that are crumbling before our eyes.

Applied Spatial Data Analysis with R Roger S. Bivand, Edzer Pebesma, Virgilio Gómez-Rubio, 2013-06-21 Applied Spatial Data Analysis with R, second edition, is divided into two basic parts, the first presenting R packages, functions, classes and methods for handling

spatial data. This part is of interest to users who need to access and visualise spatial data. Data import and export for many file formats for spatial data are covered in detail, as is the interface between R and the open source GRASS GIS and the handling of spatio-temporal data. The second part showcases more specialised kinds of spatial data analysis, including spatial point pattern analysis, interpolation and geostatistics, areal data analysis and disease mapping. The coverage of methods of spatial data analysis ranges from standard techniques to new developments, and the examples used are largely taken from the spatial statistics literature. All the examples can be run using R contributed packages available from the CRAN website, with code and additional data sets from the book's own website. Compared to the first edition, the second edition covers the more systematic approach towards handling spatial data in R, as well as a number of important and widely used CRAN packages that have appeared since the first edition. This book will be of interest to researchers who intend to use R to handle, visualise, and analyse spatial data. It will also be of interest to spatial data analysts who do not use R, but who are interested in practical aspects of implementing software for spatial data analysis. It is a suitable companion book for introductory spatial statistics courses and for applied methods courses in a wide range of subjects using spatial data, including human and physical geography, geographical information science and geoinformatics, the environmental sciences, ecology, public health and disease control, economics, public administration and political science. The book has a website where complete code examples, data sets, and other support material may be found: <http://www.asdar-book.org>. The authors have taken part in writing and maintaining software for spatial data handling and analysis with R in concert since 2003.
