Animal production and natural resources utilisation in the Mediterranean mountain areas A. Georgoudis,A. Rosati,C. Mosconi,2023-08-28 Mediterranean inhabitants depend on natural resources for their livelihoods. Livestock production and forestry are key sources of income yet are carried out under harsh conditions such as limited land resources, marginal agricultural conditions, isolation, and scant equipment and infrastructure. Livestock is of particular importance in mountain production systems as they convert plant biomass into useful products for humans such as milk, meat and draught power. These products are key to the regions' sustainability. The main topics discussed in this book are: Human geography of Mediterranean mountain territories. Livestock production and natural resources. Improving the efficiency of livestock systems in Mediterranean mountain areas. Applications of new technologies for environmentally sound management of livestock and natural resources. The role livestock plays in rural development and in safeguarding natural resources.

Mushroom Biology Philip G Miles,Shu-Ting Chang,1997-06-01 The discipline of Mushroom Biology, created by the authors of this book, has now been legitimized by references in the scientific literature and by two International Conferences devoted to the subject. This book sets the parameters of Mushroom Biology in a concise manner and also emphasizes trends and points out future directions which will lead to a greater utilization of mushrooms and mushroom products. The discipline was established to bring together persons who have in common scientific or commercial interests involving mushrooms. The authors' definition of mushroom is more broad than the usual mycological definition so that macrofungi other than Basidiomycetes can be included. Mushrooms may be edible, non-edible, poisonous or medicinal species, with hypogeous or epigeous fruiting bodies, and their texture may be fleshy or non-fleshy. Many aspects of Mushroom Biology are presented, including nutritional and medicinal uses, the role of mushrooms in bioremediation, biotechnology, and in the bioconversion of waste organic materials into forms that can enter the major nutrient cycles. Basic scientific studies involving mushroom species are also considered with an emphasis on genetics and breeding. Lifestyle Migration Michaela Benson,2016-05-06 Relatively affluent individuals from various corners of the globe are increasingly choosing to migrate, spurred on by the promise of a better and more fulfilling way of life within their destination. Despite its increasing scale, migration academics have yet to consolidate and establish lifestyle migration as a subfield of theoretical enquiry, until now. This volume offers a dynamic and holistic analysis of contemporary lifestyle migrations, exploring the expectations and aspirations which inform and drive migration alongside the realities of life within the destination. It also recognizes the structural conditions (and constraints) which frame lifestyle migration, laying the groundwork for further intellectual enquiry. Through rich empirical case studies this volume addresses this important and increasingly common form of migration in a manner that will interest scholars of mobility, migration, lifestyle and culture across the social sciences.

The Frontiers of the Roman Empire David Breeze,2011-12-13 “Practically all new information on the greatest empire of all and how it controlled and policed its frontiers. Absolutely fascinating!”—Books Monthly At its height, the Roman Empire was the greatest empire yet seen with borders stretching from the rain-swept highlands of Scotland in the north to the sun-scorched Nubian desert in the south. But how were the vast and varied stretches of frontier defined and defended? Many of Rome’s frontier defenses have been the subject of detailed and ongoing study and scholarship. Three frontier zones are now UNESCO World Heritage sites (the Antonine Wall having recently been granted this status—the author led the bid), and there is growing interest in their study. This wide-ranging survey will describe the varying frontier systems, describing the

extant remains, methods and materials of construction and highlighting the differences between various frontiers. Professor Breeze considers how the frontiers worked, discussing this in relation to the organization and structure of the Roman army, and also their impact on civilian life along the empire’s borders. He then reconsiders the question of whether the frontiers were the product of an overarching Empire-wide grand strategy, questioning Luttwak’s seminal hypothesis. This is a detailed and wide-ranging study of the frontier systems of the Roman Empire by a leading expert. Intended for the general reader, it is sure also to be of great value for academics and students in this field. The appendixes will include a brief guide to visiting the sites today. “The result of this book-crafting care and Breeze’s erudition is a near-perfect example of specialized military history done for a popular audience.” —Open Letters Monthly

Evaluation of Legislation Council of Europe, 2001-01-01 The evaluation of the effects of laws is a relatively recent development in Europe. Its growing importance is related to changes in the form of legislation, which is often targeted to achieve certain goals. In these circumstances, the proper application of legal norms alone is no longer sufficient, it is also necessary to verify whether the goals pursued are actually attained. Evaluation of legislation therefore means the assessment of the foreseeable or actual impact of laws to clarify the extent to which the actual impact is consistent with the stated objectives, to identify undesirable effects and to assess the coherency of the means used to attain the objectives. This publication reflects the contribution of the Council of Europe to two bilateral seminars organised with the authorities of Georgia (October 2000) and Ukraine (March 2001). It is organised into two sections: the issues at stake , and European experience.
