Power Up Yasmin Ali,2024-03-28 'A powerful and often lyrical book ... Fascinating and

insightful in equal measure' MARK MIODOWNIK, author of *Stuff Matters* and *Liquid* 'Ali's enthusiasm for energy infrastructure electrifies this engaging tour of the people and structures that power our modern world' GAIA VINCE, author of *Nomad Century* and *Adventures in the Anthropocene* 'Highly recommend ... a warm and educational read' ROMA AGRAWAL, author of *Built* and *Nuts and Bolts* _____ We rarely think about the energy systems that prop up our existence. With hot water, lighting and digital entertainment all available at the flick of a switch, it's easy to underestimate the vast global network that makes these things possible. Growing up in Iraq, Yasmin Ali regularly experienced power cuts - ironic for a country rich in oil and sunshine. Now as an engineer working in energy, Yasmin has a deep appreciation for what these resources mean for our lives. In *Power Up* she takes us on a journey across the globe to reveal the bigger picture, from solar farms shimmering in the desert to power stations hidden deep in the mountains. We discover where we get energy from, how it is moved and used around the world - and why we need to understand the whole system if we want to transition towards a clean, green future. *Power Up* is a definitive picture of the intricate world that humanity has built, and a rallying cry to face the challenges of climate change using the power at our fingertips.

The New Climate War Michael E. Mann, 2021-01-12 Shortlisted for the FT/McKinsey

Business Book of the Year award A renowned climate scientist shows how fossil fuel companies have waged a thirty-year campaign to deflect blame and responsibility and delay action on climate change, and offers a battle plan for how we can save the planet. Recycle. Fly less. Eat less meat. These are some of the ways that we've been told can slow climate change. But the inordinate emphasis on individual behavior is the result of a marketing campaign that has succeeded in placing the responsibility for fixing climate change squarely on the shoulders of individuals. Fossil fuel companies have followed the example of other industries deflecting blame (think guns don't kill people, people kill people) or greenwashing (think of the beverage industry's Crying Indian commercials of the 1970s). Meanwhile, they've blocked efforts to regulate or price carbon emissions, run PR campaigns aimed at discrediting viable alternatives, and have abdicated their responsibility in fixing the problem they've created. The result has been disastrous for our planet. In *The New Climate War*, Mann argues that all is not lost. He draws the battle lines between the people and the polluters-fossil fuel companies, right-wing plutocrats, and petrostates. And he outlines a plan for forcing our governments and corporations to wake up and make real change, including: A common-sense, attainable approach to carbon pricing- and a revision of the well-intentioned but flawed currently proposed version of the Green New Deal; Allowing renewable energy to compete fairly against fossil fuels Debunking the false narratives and arguments that have worked their way into the climate debate and driven a wedge between even those who support climate change solutions Combatting climate doomism and despair-mongering With immensely powerful vested interests aligned in defense of the fossil fuel status quo, the societal tipping point won't happen without the

active participation of citizens everywhere aiding in the collective push forward. This book will reach, inform, and enable citizens everywhere to join this battle for our planet.

Sino-U.S. Energy Triangles David Zweig,Yufan Hao,2015-07-24 The remarkable performance of the Chinese economy in the last three decades has placed China at the centre of the world stage. In 1993, China became a net importer of energy, although it was not until the early 2000s that the world began to pay more attention to China's energy needs and its potential impact on the world. With China's energy search occurring within a hegemonic global structure dominated by the United States, the US watches with interest as China enhances its ties with energy-rich states. The book examines this triangular relationship and questions whether the US and China are in competition regarding access to the energy of a third state, within the context of a potential power transition. It includes case studies on China's energy relationship with countries such as Canada, Australia, Saudi Arabia, Nigeria, Brazil, Kazakhstan, Iran, Sudan and Venezuela and aims to understand the way a rising power interacts with the existing leading power and the possible outcome of this competition. The analytical framework employed helps the reader to understand not only the nature and pattern of triangles among US, China and the Resource Rich States under 'resource diplomacy', but also the salient features of US-China competition around the world. Making an impressive contribution to the literature in fields such as US-China relations, international relations, Chinese foreign policy and global energy geopolitics, this book will appeal to students and scholars of these subjects.

The Thread of Energy Martin J. Pasqualetti,2021-10-19 Energy weaves the tapestry of our lives, and it does so in more ways than we usually recognize. While it is clear that it powers our homes, airplanes, and factories, its overwhelming influence often goes without notice in other areas, from the heartbreak of poverty to the motivation for war. While maintaining its availability has the potential to create jobs and contribute to competitive economies, nonrenewable energy sources are scarring our landscapes, polluting our air, and fouling our water. Understanding how we use energy and what we are willing to do to maintain our access to it can help us prepare for the complex and daunting challenges that linger as we look for alternatives. In *The Thread of Energy*, Martin J. Pasqualetti homes in on this vital driver of human actions and decisions. He exposes the impact of energy according to multiple scales of measurement and assessment, from everyday applications to global entanglements. The book traces our increasing dependence on Earth's nonrenewable energy resources by comparing lifestyle changes throughout history. Pasqualetti showcases the many ways energy infiltrates communication methods in all its forms (e.g., print, visuals, digital, etc.). The final chapters detail various approaches used by democratic societies looking to lessen their energy usage, including the critical importance of environmentally conscious policymakers. *The Thread of Energy* treats energy as a social issue with a technical component, rather than the other way around.

Future Electricity System Based on Energy Internet: Energy storage system design, Optimal Scheduling, Security, Attack Model and Countermeasures Dou An, Huan Xi, Hanlin Zhang, Jianhua Yang, Lei Chai, 2023-11-09 Energy Internet, a futuristic evolution of electricity system, is conceptualized as an energy sharing network. The energy internet integrates advanced sensors, efficient measurement technologies, advanced control methods, and efficient energy utilization/conversion/storage system to achieve economical, efficient, and environmentally friendly operation of the power grid system. The energy internet also

contains a large amount of heterogeneous information, which requires the support of information technology more than traditional power system design. Moreover, due to the open network environment of the energy internet, any anomaly or malicious attack in the system can bring unpredictable and significant losses to the overall grid operation.
