Frontiers of Polymer Research Jai K. Nigam, Paras N. Prasad, 2012-12-06 This book represents the proceedings of the First International Conference on Frontiers of Polymer Research held in New Delhi, India during January 20-25, 1991. Polymers have usually been perceived as substances to be used in insulations, coatings, fabrics, and structural materials. Defying this classical view, polymers are emerging as a new class of materials with potential applications in many new technologies. They also offer challenging opportunities for fundamental research. Recognizing a tremendous growth in world wide interest in polymer research and technology, a truly global 1st International Conference on Frontiers of Polymer Research was organized by P. N. Prasad (SUNY at Buffalo), F. E. Karasz (University of Massachusetts) and J. K. Nigam (Shriram Institute for Industrial Research, India). The 225 participants represented 25 countries and a wide variety of academic, industrial and government groups. The conference was inaugurated by the Prime Minister of India, Mr. Chandra Shekhar and had a high level media coverage. The focus of the conference was on three frontier areas of polymer research: (i) Polymers for photonics, where nonlinear optical properties of polymers show great promise, (ii) Polymers for electronics, where new conduction mechanisms and photophysics have generated considerable enthusiasm and (iii) High performance polymers as new advanced polymers have exhibited exceptionally high mechanical strength coupled with light weight.

*The Sailor* David F. Schmitz, 2021-02-23 In *The Sailor*, David F. Schmitz presents a comprehensive reassessment of Franklin Delano Roosevelt's foreign policymaking. Most historians have cast FDR as a leader who resisted an established international strategy and who was forced to react quickly after the attack on Pearl Harbor, launching the nation into World War II. Drawing on a wealth of primary documents as well as the latest secondary sources, Schmitz challenges this view, demonstrating that Roosevelt was both consistent and calculating in guiding the direction of American foreign policy throughout his presidency. Schmitz illuminates how the policies FDR pursued in response to the crises of the 1930s transformed Americans' thinking about their place in the world. He shows how the president developed an interlocking set of ideas that prompted a debate between isolationism and preparedness, guided the United States into World War II, and mobilized support for the war while establishing a sense of responsibility for the postwar world. The critical moment came in the period between Roosevelt's reelection in 1940 and the Pearl Harbor attack, when he set out his view of the US as the arsenal of democracy, proclaimed his war goals centered on protection of the four freedoms, secured passage of the Lend-Lease Act, and announced the principles of the Atlantic Charter. This long-overdue book presents a definitive new perspective on Roosevelt's diplomacy and the emergence of the United States as a world power. Schmitz's work offers an important correction to existing studies and establishes FDR as arguably the most significant and successful foreign policymaker in the nation's history.

**Plastics Engineering** Russell J. Crawford, Peter Martin, 2020-01-22 *Plastics Engineering*, Fourth Edition, presents basic essentials on the properties and processing behaviour of plastics and composites. The book gives engineers and technologists a sound understanding of basic principles without the introduction of unduly complex levels of mathematics or chemistry. Early chapters discuss the types of plastics currently available and describe how designers select a plastic for a particular application. Later chapters guide the reader through the mechanical behaviour of materials, along with a detailed analysis of their major processing techniques and principles. All techniques are illustrated with numerous worked examples within each chapter, with further problems provided at the end. This updated edition has been thoroughly revised to reflect major changes in plastic materials and their processing techniques that have occurred since the previous edition. The plastics and processing techniques addressed within the book have been comprehensively updated to reflect current materials and technologies, with new worked examples and problems also included. Gives new engineers and technologists a thorough understanding of the essential properties and processing behavior of plastics and composites Presents a great source of foundational information for students, early-career engineers and researchers Demonstrates how basic engineering principles in design, mechanics of materials, fluid mechanics and thermodynamics may be applied to the properties, processing and performance of modern plastic materials

Solarnomics David Wright,2022-04-05 Solar power has come of age. Not only has it become one of the key alternatives to fossil fuels, it can now be deployed in a way that makes a viable business with a financial profit. This book shows industry professionals and students how to do just that. Solarnomics describes the economics of building and operating a solar power plant today and provides a window into a future in which several technologies collaborate, and in which all participants in the electricity grid become smarter at scheduling both the supply and demand for electric power to give humanity a future that is sustainable, both environmentally and economically. The book shows how to estimate costs and revenues, how to tweak the design of a project to improve profitability, how to calculate return on investment, how to assess and deal with risk, how to raise capital, how to combine solar with batteries to make a hybrid microgrid, and how to be prepared for future developments in the evolving smart electricity grid. Solarnomics will enable professionals in the solar industry to assess the potential profitability of a proposed solar project, and it will enable students to add an extra dimension to their understanding of sustainability.

**The Effect of Creep and Other Time Related Factors on Plastics and Elastomers** Laurence W. McKeen,2009-06-25 The second edition of the classic data book, The Effect of Creep and Other Time Related Factors on Plastics and Elastomers (originally published in 1991), has been extensively revised with the addition of an abundance of new data, the removal of all out-dated information, and the complete rebuilding of the product and company listings. This new edition also has been reorganized from a polymer chemistry point of view. Plastics of similar polymer types are grouped into chapters, each with an introduction that briefly explains the chemistry of the polymers used in the plastics. An extensive introductory chapter has also been added, which summarizes the chemistry of making polymers, the formulation of plastics, creep-testing, test methods, measurements, and charts, as well as theory and plastic selection. Each chapter is generally organized by product and concludes with comparisons of brand or generic products. The appendices include a list of trade names, plastics sold under those names, and manufacturer. A list of conversion factors for stress measures is also included. ABOUT THE AUTHOR Laurence W. McKeen earned a B.S. in Chemistry from Rensselaer Polytechnic Institute in 1973 and a Ph.D. in 1978 from the University of Wisconsin. He began his career with DuPont in 1978 as a mass spectroscopist, but moved into product development in the Teflon® Finishes group in 1980. Dr. McKeen has accumulated over 28 years of experience in product development and applications, working with customers in a wide range of industries, which has led to the creation of dozens of commercial products. More than 8 core chapters, which serve as a databank for evaluating the creep of plastics Over 600 uniform graphs for more than 45 generic families of plastics are explained Types of graphs include: (1) Isochronous Stress–Strain Curves at Various Times and Temperatures (2) Creep Strain or Creep Deformation versus Time at Various Stress Levels and Temperatures (3) Various Modulus Measures (Tensile, Compressive, Flexural) versus Time at Various Temperatures (4) Hoop Stress versus Time at Various Temperatures (5) Stress Cracking and Other Plastics Failure versus Time (6) Creep Rupture
