Card Sorting Donna Spencer, 2009-04-01 Card sorting helps us understand how people think about content and categories. Armed with this knowledge, we can group information so that people can better find and understand it. In this book, Donna describes how to plan and run a card sort, then analyse the results and apply the outcomes to your project.

**Transforming the Workforce for Children Birth Through Age 8** National Research Council, Institute of Medicine, Board on Children, Youth, and Families, Committee on the Science of Children Birth to Age 8: Deepening and Broadening the Foundation for Success, 2015-07-23 Children are already learning at birth, and they develop and learn at a rapid pace in their early years. This provides a critical foundation for lifelong progress, and the adults who provide for the care and the education of young children bear a great responsibility for their health, development, and learning. Despite the fact that they share the same objective - to nurture young children and secure their future success - the various practitioners who contribute to the care and the education of children from birth through age 8 are not acknowledged as a workforce unified by the common knowledge and competencies needed to do their jobs well. *Transforming the Workforce for Children Birth Through Age 8* explores the science of child development, particularly looking at implications for the professionals who work with children. This report examines the current capacities and practices of the workforce, the settings

in which they work, the policies and infrastructure that set qualifications and provide professional learning, and the government agencies and other funders who support and oversee these systems. This book then makes recommendations to improve the quality of professional practice and the practice environment for care and education professionals. These detailed recommendations create a blueprint for action that builds on a unifying foundation of child development and early learning, shared knowledge and competencies for care and education professionals, and principles for effective professional learning. Young children thrive and learn best when they have secure, positive relationships with adults who are knowledgeable about how to support their development and learning and are responsive to their individual progress. *Transforming the Workforce for Children Birth Through Age 8* offers guidance on system changes to improve the quality of professional practice, specific actions to improve professional learning systems and workforce development, and research to continue to build the knowledge base in ways that will directly advance and inform future actions. The recommendations of this book provide an opportunity to improve the quality of the care and the education that children receive, and ultimately improve outcomes for children.

**Video Games as Tools to Achieve Insight into Cognitive Processes** Walter R. Boot,2015-06-04 Though traditionally designed for entertainment, video games are being used more and more by psychologists to understand topics such as skill acquisition, cognitive capacity and plasticity, aging, individual differences, and development. The appeal of using video games over simpler laboratory paradigms partly comes from their ability to present rich and complex cognitive challenges more representative of the demands of the

complex everyday tasks we perform outside of the laboratory. However, this complexity also presents a host of methodological and analytic challenges. This Research Topic brings together research using games to explore cognitive processes, with a special focus on the challenges of this approach. Challenges are in terms of design, implementation, or data analysis.

**Approximate Number System and Mathematics** Jingguang Li,Xinlin Zhou,Marcus Lindskog,2019-11-25 Humans process quantity information without the aid of language or symbols to guide a variety of everyday life decisions. The cognitive system that supports this intuitive skill is often referred to as the approximate number system (ANS). It has been argued that the ANS serves as the foundation of the formal symbolic number system—mathematics. Abundant empirical evidence is supportive of this view: acuity of the ANS is positively correlated with symbolic math performance, training of the ANS may cause improvements in symbolic math performance, and the ANS and symbolic number processing may share a common neural underpinning. However, recently several theories and empirical data cast doubt on the role of the ANS in symbolic math processing. This e-book aims to advance our understanding of

the underlying mechanisms of the overlap between the ANS and mathematics.

**Defending athletes, players, clubs and fans** Daniel Rietiker, 2022-10-20 A key manual for human rights education and litigation in sport, in particular before the European Court of Human Rights. This essential book describes the scope and limits of the European Court of Human Rights' role in resolving human rights disputes in sport, drawing on its own case law and other jurisdictions, notably the United States. It covers all aspects of the actual and potential application of human rights in sport as they relate to athletes, players, clubs and supporters. All those interested in the link between human rights education, strategic litigation and sport will find in this indispensable handbook the first comprehensive and explained summaries of the Court's case law in this area.
