Evaluating Participatory Mapping Software Charla M. Burnett, 2023-04-21 This volume provides a framework for evaluating geospatial software for participatory mapping. The evaluation is based on ten key indicators: ethics, cost, technical level, inclusiveness, data accuracy, data privacy, analytical capacity, visualization capacity, openness, and accessibility (i.e., mobile friendly or offline capabilities). Each application is evaluated by a user and cross analyzed with specific case studies of the software's real-world application. This framework does not discriminate against assessing volunteered geographic information (VGI) applications, as a form of participatory mapping, in circumstances that its application is spearheaded by underrepresented groups with the intent to empower and spark political or behavioral change within formal and informal institutions. Each chapter follows a strict template to ensure that the information within the volume can be updated periodically to match the ever-changing technological environment. The book covers ten different mapping applications with the goal of creating a comparative evaluation framework that can be easily interpreted by convening institutions and novice users. This will also help identify gaps in software for participatory mapping which will help to inform application development in the future and updates to current geospatial software.

What's New in iPhone 13? Ben Davies, 2022-02-16 DO YOU UPGRADE FROM YOUR CURRENT DEVICE OR STAY PUT? Read on.. Alas, the iPhone 13 doesn't boast the adaptive 120Hz refresh rate of the iPhone 13 Pro, but it's still a stellar OLED panel. This Super Retina XDR display is now 28% brighter than the iPhone 12; it's also rated at 800 nits, compared to 600 nits for last year's phone. The iPhone 13 averaged 795 nits of brightness, compared to 569 nits for the iPhone 12 and 702 nits for the Galaxy S21. The iPhone 13 also registered 78.1% of the DCI-P3 color gamut and 110.2% of the sRGB color gamut, where higher numbers are better. The iPhone 12 hit 81.1 and 114.5 and the Galaxy S21 77.4 and 109.2. The

iPhone 13 panel's color accuracy is stellar, too, as it achieved a Delta-E score of 0.26 (lower is better.) That compares to 0.29 for both the Galaxy S21 and iPhone 12. There's much more to the iPhone 13 cameras than just a new diagonal arrangement of the lenses. The wide camera now gathers 47% more light than the iPhone 12, thanks to a larger camera with 1.7 μ m pixels. The iPhone 13 is the rare smartphone that can make you feel like a director as you shoot videos. And that's thanks to a new feature called Cinematic mode. This effect brings depth of field to your footage and automatically changes the focus to various subjects depending on what's happening in the frame, such as someone turning their head to talk to another person. You don't have to lift a finger and it works (almost) like magic. Cinematic mode isn't perfect, as the iPhone 13 sometimes took a second to recognize faster moving subjects (our younger golden retriever). A bigger drawback is that this mode is capped at 1080p, as you can't record Cinematic mode in 4K. But overall, it's a cool feature I think a lot of people will want to try, especially for social videos on TikTok. Want to discover more? Read this guide now to learn more.
