**Lead with Heart** Tom Gartland,Patrick Sweeney,2018-05-01 If you want your company to thrive, you need to break one of the oldest unwritten rules of leadership. Leaders in nearly every industry have learned to keep a professional distance between themselves and the people who report to them—to avoid getting too close or too personal. This unwritten rule of leadership is pervasive and quietly destructive, and, little by little, keeping ourselves at arm's length destroys trust, collaboration, and the very fabric of organizations. When Tom Gartland became president of Avis Budget Group, North America, he wanted the corporate culture to become more open and connected—so he started with himself. His message was business is personal—very personal. As he grew closer and connected more with those he was leading, he became a more effective leader, and those around him were inspired to create unprecedented results. Tom found that when we truly open up and care about the people we work with, we can transform organizations into sanctuaries where people feel a deep connection to one another, a profound sense of being part of an important mission, and extraordinary engagement in their work. The result? Employees who feel valued generate exceptional profits. After applying this business philosophy at Avis, not only did Tom see an increase in employee morale, he also saw a significant increase in the company's bottom line. In *Lead with Heart*, Tom provides an unconventional approach to

business leadership, including advice and strategies on how to open yourself up as a leader, recognize potential in your employees, and increase employees' trust in you and the company. Lead with Heart is the revolutionary leadership book that will help managers and employees at all levels grow their businesses by connecting, honestly and meaningfully, with the people they lead.

The Economics of E-Commerce Nir Vulkan, 2020-06-30 Despite the recent misfortunes of many dotcoms, e-commerce will have major and lasting effects on economic activity. But the rise and fall in the valuations of the first wave of e-commerce companies show that vague promises of distant profits are insufficient. Only business models based on sound economic propositions will survive. This book provides professionals, investors, and MBA students the tools they need to evaluate the wide range of actual and potential e-commerce businesses at the microeconomic level. It demonstrates how these tools can be used to assess a variety of existing applications. Advances in web-based technology--particularly automation and delegation technologies such as smart agents, shopping bots, and bidding elves--support the further growth of e-commerce. In addition to enabling consumers to conduct automated comparisons and sellers to access visitors' background information in real time, such software programs can make decisions for individuals, negotiate with other programs, and participate in online markets. Much of e-commerce's economic value arises from this kind of automation, which not only reduces operating costs but adds value by generating new market interactions. This text teaches how to analyze the added value of such applications, considering consumer behavior, pricing strategies, incentives, and other critical factors. It discusses added value in several e-commerce arenas: online shopping, business-to-business e-commerce, application design, online negotiation (one-to-one trading), online auctions (one-to-many trading), and many-to-many electronic exchanges. Combining insights from several years of microeconomic research as well as from game theory and computer science, it stresses the

importance of economic engineering in application design as well as the need for business models to take into account the total game. As the only serious treatment of the microeconomics of e-commerce, this book should be read by anyone seeking e-commerce solutions or planning to work in the field.
