Progress Johan Norberg,2017-04-06 A Book of the Year for The Economist and the Observer Our world seems to be collapsing. The daily news cycle reports the deterioration: divisive politics across the Western world, racism, poverty, war, inequality, hunger. While politicians, journalists and activists from all sides talk about the damage done, Johan Norberg offers an illuminating and heartening analysis of just how far we have come in tackling the greatest problems facing humanity. In the face of fear-mongering, darkness and division, the facts are unequivocal: the golden age is now.

Progress in Self Psychology, V. 10 Arnold I. Goldberg,2013-09-05 The tenth volume in the Progress in Self Psychology series begins with four timely assessments of the selfobject concept, followed by a section of clinical papers that span the topics of homosexuality, alter ego countertransference, hypnosis, trauma, dream theory, and intersubjective approaches to conjoint therapy. Section III, A Dialogue of Self Psychology, offers Merton Gill's astute appreciation of Heinz Kohut's Self Psychology, followed by commentaries by Leider and Stolorow and Gill's reply. The concluding section offers Stolorow and Atwood's The Myth of the Isolated Mind, followed by discussions by Gehrie and the Shanes. A forum for the kind of spirited, productive exchanges that have long found a home within the self-psychological community, A Decade of Progress builds on the past in responding to the theoretical and clinical challenges of the present.

Progress in Electron Properties of Solids E. Doni,R. Girlanda,G. Pastori Parravicini,A. Quattropani,2012-12-06 This volume on the novelties in

the electronic properties of solids appears in occasion of Franco Bassani sixtieth birthday, and is dedicated to honour a scientific activity which has contributed so much of the development of this very active area of research. It is remarkable that this book can cover so large a part of the current research on electronic properties of solids by contributions from Bassani's former students, collaborators at different stages of his scientific life, and physicists from all over the world who have been in close scientific relationship with him. A personal flavour therefore accompanies a number of the papers of this volume, which are both up-to-date reports on present research and original recollections of the early events of modern solid state physics. The volume begins with a few contributions dealing with theoretical procedures for electronic energy levels, a primary step toward the interpretation of structural and optical properties of extended and confined systems. Other papers concern the interacting state of electrons with light (polaritons) and the effect of the coupling of electrons with lattice vibrations, with emphasis on the thermal behaviour of the electron levels and on such experimental procedures as piezospectroscopy. Electron-lattice interaction in external magnetic field and transport-related properties due to high light excitation are also considered. The impact of synchrotron radiation on condensed matter spectroscopy is discussed in a topical contribution, and optical measurements are presented for extended and impurity levels.
