**The Project Manager's MBA** Dennis J. Cohen, Robert J. Graham, 2001-07-09 Project managers are no longer judged by the technical success of their projects alone. They're also held accountable for their contributions to the company's financial goals. Yet most project managers don't have the business knowledge necessary to make project-based decisions that lead to bottom-line success. In this book, Dennis Cohen and Robert Graham, both former university professors and experienced project management consultants, provide the skills that, until now, could only be gained through a graduate degree and years of hands-on experience. Cohen and Graham walk project managers through basic business concepts such as value creation, accounting and finance, strategy, and marketing. They connect these concepts to the decisions project managers face every day. And they make it easy to apply the resulting solutions on the job through a unique business systems calculator. Readers can use the online calculator in conjunction with the book to understand how different project variables affect business outcomes, to determine the overall impact of proposed project changes, and to evaluate the economic results of many decisions they make. Cohen and Graham's principles apply equally to projects in business, non-profit, and government organizations. And each one is illustrated through case studies drawn from a range of

industries, including pharmaceuticals, the technology sector, even the winemaking business. Whether the mandate is to get new products to market, improve the infrastructure, or better serve customers and clients, this book teaches project managers how to make day-to-day decisions from an upper-management perspective. And it provides a blueprint for planning and pitching potential projects that demonstrates a higher level of business savvy.

### **What Executives Need to Know About Project Management**

International Institute for Learning, Harold Kerzner, Frank P.

Saladis, 2011-11-29 As project management has evolved and matured, so has the executive's role in project management. To ensure the success of individual projects and the organization as a whole, today's executives are increasingly involved in activities such as capacity planning, portfolio management, prioritization, and strategic planning specifically for project management. In fact, more and more executives are becoming certified Project Management Professionals (PMPs). What Executives Need to Know About Project Management offers executives a guide

to project management, focusing on what they need to know and what they need to do. It provides step-by-step guidance to help executives get effective, well-resourced project management teams in place and ensure the success of any individual project. The book begins with basic principles, including a detailed discussion of the three best practices that enable executives to ensure effective project management: Developing an environment where project management is viewed as a profession Securing key personnel for project management positions Creating opportunities for rewards and advancement through successful project management Next, the book explores how executives serve as executive sponsors in project management teams, setting forth solutions to the many problems and challenges they face in this role, including managing disagreements, delegating authority, and accelerating projects. The authors explain how the role of the executive sponsor changes depending upon the life-cycle phase of the project. For example, during the project initiation and planning phases, the sponsor may take on a very active role, ensuring that proper objectives are established and that the project plan satisfies the needs of the business as well as the needs of the client. During the execution phase, the sponsor may take on a less active role; however, the book shows how executive sponsors need to become involved when roadblocks appear, crises occur, and conflicts arise over priorities among projects. Throughout the book, helpful illustrations clarify complex concepts and processes.
