This book provides practical information on how to use various psychotropic drugs in clinical practice, focusing on their mechanisms of action on receptors and enzymes in the brain. Divided into 11 chapters, it covers all main drug classes, with a dedicated chapter each on special populations and upcoming drugs. All the drugs discussed are presented in the same design format in order to facilitate rapid access to information. Specifically, each drug is individually divided into sections - its history and introduction, classification, pharmacological action, doses, drug interactions, indications, side effects and special populations. Only the essential facts about each drug have been included, so as to make the content concise and to avoid dilution of important information. To aid with review, key points are summarized at the end of each chapter.

**Essentials of Clinical Psychopharmacology** Alan F. Schatzberg, Charles B. Nemeroff, 2006 This new edition of Essentials of Clinical Psychopharmacology is a synopsis and update of the most clinically relevant material from The American Psychiatric Publishing Textbook of Psychopharmacology, Third Edition. The Essentials focuses on the aspects of psychopharmacology directly related to clinical care and will appeal to psychiatry residents, primary care physicians, and others interested in a concise tutorial on clinical psychopharmacology. The book is organized around two major sections of the Textbook. The first section, Classes of Psychiatric Treatments, presents information by classes of drugs and greatly expands on the first edition of the textbook by focusing whole chapters on single drugs in the antidepressant, antipsychotic, and bipolar categories. For each drug within a class, data are reviewed on preclinical and clinical pharmacology, pharmacokinetics, indications, dosages, side effects and toxicology, and drug-drug interactions. Included are data on currently available drugs in the United States and medications that will almost certainly become available in the near future. The second section, Psychopharmacological Treatment, provides specific

information about drug selection and prescription and reviews state-of-the-art therapeutic approaches to the treatment of patients with major psychiatric disorders. Also reviewed are pharmacotherapeutic approaches for special populations, such as children and adolescents, medically ill patients, and the elderly. Chapters are devoted to pharmacotherapy in special situations, such as during pregnancy and lactation and in psychiatric emergencies. This section provides the reader with specific information about drug selection and prescribing practices. In addition to the clinical focus of the Essentials, the authors have provided new information based on more recent literature available since publication of the Textbook. Included are updates on the effectiveness and availability of specific drugs and therapeutic approaches.
