

Pulse 2014

Punam Chuhan-Pole

Africa's Pulse, Fall 2014 Punam Chuhan-

Pole, 2014-11-24 Africa's Pulse is a biannual publication containing an analysis of the near-term macro-economic outlook for the region. It also includes a section focusing on a topic that represents a particular development challenges for the continent. It is produced by the Office of the Chief Economist for the Africa Region. This issue is an analysis of issues shaping Africa's economic future. Growth remains stable in Sub-Saharan Africa. Some countries are seeing a slowdown, but the region's economic prospects remain broadly favorable. External risks of higher global financial market volatility and lower growth in emerging market economies weigh on the downside. In several Sub-Saharan African countries, large budgetary imbalances are a source of vulnerability to exogenous shocks and underscore the need for rebuilding fiscal buffers in these countries. The Ebola outbreak is exacting a heavy human and economic toll on affected countries and, if not rapidly contained, the risk of wider contagion grows. Without a scale-up of effective interventions, growth would slow markedly not only in the core countries (Guinea, Liberia, and Sierra Leone), but also in the sub region as transportation, cross-border trade, and supply chains are severely disrupted. In Sub-Saharan Africa, growth in agriculture and services is more effective at reducing poverty than growth in industry. Structural transformation has a role to play in accelerating poverty reduction in Sub-Saharan Africa. Increasing agricultural

productivity will be critical to fostering structural transformation. Boosting rural income diversification can facilitate this transformation, as well. Investments in rural public goods and services (for example, education, health, rural roads, electricity and ICT), including in small towns, will be conducive to lifting productivity in the rural economy. Although Sub-Saharan Africa's pattern of growth has largely bypassed manufacturing, growing the region's manufacturing base, especially by improving its fundamentals, lower transport cost, cheaper and more reliable power, and a more educated labor force, will benefit all sectors.

Global and regional pulse economies Joshi, Pramod Kumar, Rao, P. Parthasarathy, 2016-07-22 The pulse sector is undergoing dynamic changes globally and in several regions and countries to meet the challenge of growing demand in the face of sluggish production growth. Realizing the importance of pulses in the human diet, 2016 has been declared the International Year of Pulses (IYP). This report captures the dynamics of the pulse sector during the last three decades. The examination of pulse supply, demand, uses, trade, prices, and outlook would help researchers and policy makers make more informed decisions related to the sector. Pulse-based food is an important source of dietary protein and essential minerals, particularly for the vegetarian population. At the global level, the average share of pulses is only 5 percent of the total protein consumption but their contribution in several developing countries range between 10 and 40 percent. To meet the

growing demand and raise their per capita availability, countries made efforts to increase production and explore trade opportunities to augment domestic supply. Overall between 1980 and 2013, pulses production at the global level grew at an annual rate of 1.3 percent but there were, however, two phases of pulses production at the global level. While there was almost a period of stagnation in production of pulses during the 1990s, production has sharply increased since 2005. The bulk of the increase in production came from developing countries where both area and yield growth (from a low base) contributed to the production. For developed countries—where production also grew—the center of production shifted from Europe to North America and Oceania. For developing countries, two new centers of production emerged in Eastern Africa and Southeastern Asia (Myanmar).

Pulse Frank Coker, 2014-07-31 Understanding business performance and financial data in terms of trends and forecasts changes everything. Even though the science of predictive analytics is complex, the Corelytics Financial Dashboard makes the power of this information easy to use by all business owners and managers. When the dashboard is combined with a management process, and even better when assisted by a professional advisor, business leaders can achieve a much greater precision in setting and achieving goals. Corelytics uses business intelligence (BI) concepts, combining external market metrics and benchmarks in combination with internal ratios, trends and metrics to show business leaders exactly how their company or organization is performing in comparison to market averages and to internal goals. Corelytics uses data directly from

the company's accounting system so that no data entry is required. Corelytics is used by small and medium-sized businesses in North America, Europe, Australia, and in approximately 30 other countries around the world. Corelytics is used by service companies, retailers, not for profit organizations, manufactures, in a large and growing list of industries. The goal of this book is to help business owners and managers take advantage of new financial management tools and disciplines in order to improve their survival rate and to build economic value that will benefit business owners and the general public.

Africa's Pulse, Fall 2015 Punam Chuhan-Pole, 2015 External headwinds and domestic difficulties are impacting economic activity in Sub-Saharan Africa. Sub-Saharan Africa's growth will decelerate in 2015 amid weak global economic conditions. Some countries, however, will continue posting solid growth. Sub-Saharan Africa is entering a period of tightening borrowing conditions amid growing domestic and external vulnerabilities. Reflecting the widening fiscal deficits, government debt has continued to rise in many countries. Weak fundamentals, combined with the strong appreciation of the U.S. dollar, have kept currencies across the region under pressure throughout the year. Policy buffers are low in several countries, constraining the response to the current environment and underscoring the need for African countries to improve domestic resource mobilization and enhance public expenditure efficiency. Progress in reducing income poverty in Sub-Saharan Africa may have been faster than the

authors thought, but poverty remains high. The region's growth deceleration challenges efforts to reduce poverty.

Lexicon of Pulse Crops Aleksandar

Mikić, 2018-06-27 Lexicon of Pulse Crops integrates botanical and linguistic data to analyze and interpret the grain legume significance from the earliest archaeological and written records until the present day. Aimed at both agronomic and linguistic research communities, this book presents a database containing 9,500 common names in more than 900 languages and dialects of all ethnolinguistic families, denoting more than 1,100 botanical taxa of 14 selected pulse crop genera and species. The book begins with overviews of the world's economically most important grain legume crops and their uncultivated relatives, as well as the world's language families with their inner structure, including both extinct and living members. The main section of the text presents 14 specialized book chapters covering *Arachis*, *Cajanus*, *Cicer*, *Ervum*, *Faba*, *Glycine*, *Lablab*, *Lathyrus*, *Lens*, *Lupinus*, *Phaseolus*, *Pisum*, *Vicia*, and *Vigna*. They provide the reader with extensive lists of the botanically accepted species and subtaxa and surveys lexicological abundance in all world's ethnolinguistic families, comprising extinct and living as well as natural and constructed languages, while the vernacular names for the most significant taxa are presented in comprehensive tables. Each of these chapters also presents the existing etymologies and novel approaches to deciphering the origins of common names, accompanied by one original color plate

depicting possible root evolutions in the form of corresponding pulse crop plants.

High Energy and Short Pulse Lasers Richard Viskup, 2016-09-07 This book gives the readers an introduction to experimental and theoretical

knowledge acquired by large-scale laser laboratories that are dealing with extra-high peak power and ultrashort laser pulses for research of terawatt (TW), petawatt (PW), or near-future exawatt (EW) laser interactions, for soft X-ray sources, for acceleration of particles, or for generation of hot dense thermal plasma for the laser fusion. The other part of this book is dealing with the small-scale laser laboratories that are using for its research on commercial sources of laser radiation, nanosecond (ns), picosecond (ps), or femtosecond (fs) laser pulses, either for basic research or for more advanced applications. This book is divided into six main sections dealing with short and ultrashort laser pulses, laser-produced soft X-ray sources, large-scale high-power laser systems, free-electron lasers, fiber-based sources of short optical pulse, and applications of short pulse lasers. In each chapter readers can find fascinating topics related to the high energy and/or short pulse laser technique. Individual chapters should serve the broad spectrum of readers of different expertise, layman, undergraduate and postgraduate students, scientists, and engineers, who may in this book find easily explained fundamentals as well as advanced principles of particular subjects related to these phenomena.

Genomic Designing of Climate-Smart Pulse Crops

Chittaranjan Kole, 2019-05-28 This book describes the concepts, strategies and techniques for pulse-crop improvement in the era of climate change, highlighting the latest advances in plant molecular mapping and genome sequencing. Genetic

mapping of genes and QTLs has broadened the scope of marker-assisted breeding and map-based cloning in almost all major pulse crops. Genetic transformation, particularly using alien genes conferring resistance to herbicide, insects and diseases has facilitated the development of a huge number of genetically modified varieties of the major pulse crops. Since the genome sequencing of rice in 2002, genomes of over 7 pulse crops have been sequenced. This has resulted in the possibility of deciphering the exact nucleotide sequence and chromosomal positions of agroeconomic genes. Most importantly, comparative genomics and genotyping-by-sequencing has opened up a new vista for exploring wild crop relatives for identification of useful donor genes.
