FInkelstein, 2017-01-10 Si containing polymers have been instrumental in the development of membrane gas separation practices since the early 1970s. Their function is to provide a selective barrier for different molecular species, where selection takes place either on the basis of size or on the basis of physical interactions or both. Cells, Proteins and Materials Heather Sheardown, Stuart L. Cooper, 2003-05-31 Proteins, Cells and Materials contains a collection of articles, which constitute together the complete Festschrift in honor of the 65th birthday of Dr. John L. Brash. For the first time these articles - published previously in several special issues of the Journal of Biomaterials Science Polymer Edition - have been compiled into one comprehensive volume. Over the past 40 years John Brash, a member of the Editorial Board of the Journal of Biomaterials Science Polymer Edition, has distinguished himself in the field of biomaterials. Much of his efforts have focused on detailed studies of bloodâ€“surface interactions, particularly those of plasma proteins. His multi-faceted approach recognises the importance of hemodynamics, transport and surface phenomena in the gross effects that result from bloodâ€“surface contact. In this book articles on the most recent development in these areas are collected and will thus provide a wealth of information of current research to specialists in the above-mentioned fields.

Construction Methods and Planning J.R. Illingworth, 2002-09-26 This new edition of John Illingworth's popular book provides a thorough introduction to the selection of construction methods, their planning and organization on site. Thoroughly revised and updated, Construction Methods and Planning takes a practical, down-to-earth approach and features numerous examples and illustrations taken from real situations and sites. In Part One, the main factors which determine the planning of construction methods - site inspections, the site itself, temporary works, design, cost concepts and selection of plant and methods - are discussed. In Part Two, the application of these tools is presented, covering foundations and basements, in situ and precast concrete structures, steel frames, cladding, internal and external works, waste, methods statements, contract planning control and claims. The author provides an extension of the concept of 'buildability' and new chapters on facade retention and the refurbishment of domestic accommodation.
