Mobile Health Applications for Quality Healthcare Delivery

Moumtzoglou, Anastasius,2019-01-11 One of the central engines of the current shift towards decentralization and reorientation of healthcare services is mobile healthcare (mHealth). mHealth offers unique opportunities to reduce cost, increase efficiencies, and improve quality and access to healthcare. However, the full impact of mHealth is just beginning to be felt by the medical community and requires further examination to understand the full range of benefits it contributes to medical staff and patients. *Mobile Health Applications for Quality Healthcare Delivery* explores the emergence of mHealth in the healthcare setting and examines its impact on patient-centered care, including how it has reshaped access, quality, and treatment. Highlighting topics such as patient management, emergency medicine, and health monitoring, this publication supports e-health systems designers in understanding how mobile technologies can best be used for the benefit of both doctors and their patients. It is designed for healthcare professionals, administrators, students, health services managers, and academicians.

Digital Mammography Gary J. Whitman, Tamara Milner Haygood, 2012-11-15 Digital mammography has many advantages over film-screen mammography, including faster acquisition, easier storage and easier retrieval of images. Written by expert radiologists and physicists, *Digital Mammography: A Practical Approach* compares digital mammography to conventional film-screen mammography, reviews clinical cases and explores newer modalities. Key topics include: • Digital detectors • Monitors • Image acquisition • Image storage, retrieval and transfer • Image interpretation and efficacy • Artifacts • A comparison of commercially available systems • Mobile digital mammography. An image atlas and sections on digital tomosynthesis and computed tomography of the breast enhance the text. *Digital Mammography: A Practical Approach* melds the worlds of clinical radiology and physics in an easy-to-understand, practical resource. A valuable addition to the shelf of radiologists, radiologic technicians, practising medical physicists and mammography technologists; and any practitioners developing and expanding digital mammography programs.

Integrating a Usable Security Protocol into User Authentication Services Design Process Christina Braz, Ahmed Seffah, Bilal Naqvi, 2018-11-08 There is an intrinsic conflict

between creating secure systems and usable systems. But usability and security can be made synergistic by providing requirements and design tools with specific usable security principles earlier in the requirements and design phase. In certain situations, it is possible to increase usability and security by revisiting design decisions made in the past; in others, to align security and usability by changing the regulatory environment in which the computers operate. This book addresses creation of a usable security protocol for user authentication as a natural outcome of the requirements and design phase of the authentication method development life cycle.

Internet and Mobile Phone Addiction Olatz Lopez-

Fernandez,2019-03-07 Internet use-related addiction problems (e.g., Internet addiction, problem mobile phone use, problem gaming, and social networking) have been defined according to the same core element: the addictive symptomatology presented by individuals who excessively and problematically behave using the technology. Online activity is the most important factor in their lives, causing them the loss of control by stress and difficulties in managing at least one aspect of their daily life, affecting users' wellbeing and health. In 2018, Gaming Disorder was included as a mental disease in the 11th Revision of the International Classification of Diseases by the World Health Organization. In 2013, the American Psychiatric Association requested additional research on Internet Gaming Disorder. The papers contained in this e-Book provide unique and original perspectives on the concept, development, and early detection of the prevention of these health problems. They are diverse in the

nature of the problems they deal with, methodologies, populations, cultures, and contain insights and a clear indication of the impact of individual, social, and environmental factors on Internet use-related addiction problems. The e-Book illustrates recent progress in the evolution of research, with great emphasis on gaming and smartphone problems, signaling areas in which research would be useful, even cross-culturally.

Ad-hoc, Mobile, and Wireless Networks Nicolas Montavont, Georgios Z. Papadopoulos, 2018-08-29 This book constitutes the refereed proceedings of the 16th International Conference on Ad-hoc, Mobile, and Wireless Networks, ADHOC-NOW 2018, held in St. Malo, France, in September 2018. The 21 full and 6 short papers plus 2 invited talks presented in this volume were carefully reviewed and selected from 52 submissions. The contributions were organized in topical sections named: on ad-hoc, mobile and wireless sensor, networks and computing.

Technologies Enabling Future Mobile Connectivity & Sensing François Brunier, Björn Debaillie, Dominique Morche, Erkan Nevzat Isa, Jan Craninckx, 2024-01-09 In today's connected world, the demand for mobile communications and instant access to information, anytime and anywhere, has drastically changed the electronics landscape, both consumer and industrial. Novel 5G and 6G systems will enable connectivity in all forms between humans, devices, machines, and any objects. They will provide virtually ubiquitous, ultra-high bandwidth and low latency network access to individual users, as well as to all objects benefiting from being connected. They will be the eyes and ears of Artificial Intelligence systems as it will provide real-time data collection and analysis. Such diversity calls for a new paradigm in terms of flexibility, not only related to performance, but also in terms of scalability and cost. 5G and 6G communication systems imply a major stake of sovereignty and autonomy for the communication sector and digital infrastructures of the future. All

products related to IoT, traffic, and health care, supported by connectivity will benefit the citizens in their daily lives to improve everything from business to private affairs. Together, this will influence society as much as smart phones did in the recent past. It is all about communication and connectivity. This book provides an overview of the latest research results in this field. It is based on the close collaboration in the BEYOND5 project, extended with vision and roadmap insights by European experts leading the 6G development. The BEYOND5 project has built a completely European supply chain for Radio-Frequency Electronics, enabling new RF domains for sensing, communication, 5G radio infrastructure and beyond. Moving forward into higher frequency bands above 100 GHz for 6G, also more disruptive technologies, using heterogeneous integration of CMOS, SOI, and III/V components such as GaN or InP, and advanced packaging techniques will be necessary to realize the objectives of ubiquitous, ultra-high bandwidth and low latency networks. The book bundles the scientific content of the International Workshop on Technologies enabling future mobile connectivity & sensing in Lisbon, Portugal 10 September 2023, as part of the ESSCIRC/ESSDERC 2023 European Solid-state Circuits and Devices Conference. Through articles and abstracts, a combined view of experts and practitioners representing academia, research, and industry in the field of wireless communication systems is given. They cover the topics of RF and digital SOI technology development for 5 and 6G, device and substrate characterization, packaging technology, and the realization of full systems including power amplifiers, linearization techniques, beamforming transceivers, access points, and radar detection.

Unauthorised tapping into or hacking of mobile communications Great Britain: Parliament: House of Commons: Home Affairs Committee, 2011-10-28 The Commons Home Affairs Committee deplores News International's attempt to deliberately

thwart the original investigation into phone hacking in 2005-06 but also states that the police set aside a huge amount of material that could have identified other perpetrators and victims. The committee agrees with John Yates's own assessment that his 2009 review of this investigation was very poor, that he did not ask the right questions and that he was guilty of a serious misjudgement. The committee criticises Andy Hayman's cavalier attitude towards his contacts with those in News International who were under investigation which, even if entirely above board, risked seriously undermining confidence in the impartiality of the police, and accuses him of deliberate prevarication in order to mislead the committee. It urges the swift and thorough investigation of allegations that payments were made to police officers by the media, which will help to establish whether or not such payments may have influenced police inquiries into phone hacking. The committee welcomes DAC Sue Akers's decision to contact all potential victims of phone hacking by the News of the World as part of the current investigation, but is alarmed that only 170 have as yet been informed. At this rate it would take years to inform all of the several thousands of people potentially affected. The committee therefore recommends that extra resources are allocated to her investigation, by the Government directly if necessary. The committee also expresses concern about both the scope and understanding of current laws on phone hacking, with prosecutors and police still arguing over the meaning of relevant sections of the Regulation of Investigatory Powers Act 2000. However, this was no reason for the Metropolitan Police to limit their investigation of these matters. Finally, potential victims of phone hacking should be given a means of seeking formal advice from the Information Commissioner and easier access to redress. The Information Commissioner should be given additional powers to deal with breaches of data protection, including phone hacking and blagging. Mobile phone companies should give greater prominence to security advice in the information provided to their

customers. The report sets out 24 conclusions and recommendations.

Quality In Professional Translation Joanna

Drugan, 2013-02-28 How do translation companies, multilingual international organizations and individual translators measure and improve the quality of their translations? This book reports on the range of approaches to quality assurance across the translation industry, from Norway to China, from the individual freelance working in a home office to the largest translation supplier in the world. Best practice is outlined for a range of

translation scenarios, enabling readers to learn from others' experience - and mistakes. The author also draws on over a decade's experience to outline the potential to improve quality by exploiting modern technological support tools such as translation memory software. New and experienced translators will gain understanding of what employers expect (and reward); translation companies can learn how their peers and rivals manage this sensitive area of their work; clients will find out what levels of quality they can expect; and academics are provided with an illuminating insight into how quality is assessed and guaranteed in the profession today.

EU Competition Law Ariel Ezrachi, 2014-11-24 This book is the fourth edition of a highly practical guide to the leading cases in European Competition Law. It explores the application of Article 101 TFEU, Article 102 TFEU and the European Merger Regulation, as well as the public and private enforcement of Competition Law. In addition, it reviews the intersection between Competition Law and Intellectual Property Rights and the application of Competition Law to State action. Each chapter outlines the relevant laws, regulations and guidelines for each topic. Within this framework, cases are reviewed in summary form, accompanied by analysis and commentary. This book should be in the library of every competition law practitioner and academic. The summary of cases is first class. But what makes it really stand out is the quality of the commentary and the selection of the material which includes not only the most important European judgements and decision but also some of the leading cases from the US and European Member States. Ali Nikpay, Gibson, Dunn & Crutcher The study of EU Competition law requires the analysis and understanding of a number of increasingly complex and lengthy European Commission and European Court decisions. Through the provision of case summaries, excerpts from the important passages and concise commentary linking these decisions to other key case law and

Commission documents, this unique and impressive book provides the student and practitioner of EU competition law with an extremely clear and useful introduction to these leading decisions. Dr Kathryn McMahon, Associate Professor, School of Law, University of Warwick The Guide is an invaluable tool for both students and practitioners. It provides a compact overview on the fundamental cases and highlights the essential problems in a clear and sharp analysis. Dr Christoph Voelk, Antitrust Practice Group, McDermott, Will & Emery LLP, Brussels This edition will be especially valuable to competition law specialists abroad who are interested in the jurisprudence and policy of the European Union and its member states. Familiarity with the European regime is essential for proficiency in competition law today, and this volume provides an excellent foundation. William E Kovacic, Global Competition Professor of Law and Policy, George Washington University Law School, Former Chairman, US Federal Trade Commission A perfect reference for students of competition law, giving them a kick start when searching for EU case law on a specific subject. Magnus Strand, University of Uppsala, Sweden
