since 1997, the event included several robotic competitions and aninternationalsymposium.Thepapersandposterspresentedatthesymposium constitutethemainpartofthisbook.Leaguereportsinthe?nalsectiondescribe signi?cant advances in each league and the results. The symposium organizers received 76 submissions, among which 17 papers (22%) were accepted for oral presentation at the symposium (?rst section of the book), and 21 papers (29%) were accepted as posters (second section of the book). Most papers were evaluated by three reviewers each, chosen from the members of the International Program Committee (IPC). The IPC consisted of a balanced combination of regular RoboCup participants and researchers from outside this community. The reviewers worked hard to guarantee a fair review process – the result of their work was a high-quality symposium with very - teresting presentations.

*The West in Early Cinema* Nanna Verhoeff,2006-01-01 Verhoeff investigates the emergence of the western genre, made in the first two decades of cinema (1895-1915). By analyzing many unknown and forgotten films from international archives she traces the relationships between films about the American West, their surrounding films, and other popular media such as photography, painting, (pulp) literature, Wild West Shows and popular ethnography. Through this exploration of archival material she raises new questions of historiography and provides a model for historical analysis. These first traces of the Western film reveal a preoccupation with presence and actuality that informs us about the way in which film, as new medium, took shape within the context of its contemporary visual culture. In The West in Early Cinema gaat Nanna Verhoeff op zoek naar de nog onbekende beginjaren van het westerngenre tijdens de eerste twee decennia van het medium film 1895-1915). Aan de hand van onbekende en vergeten films uit internationale filmarchieven traceert zij de relaties tussen films over het Westen, omringende filmgenres uit deze periode, en andere populaire media als fotografie, schilderkunst, (pulp)literatuur, Wild West Shows en populaire etnografie. Deze sporen van het genre tonen een grote actualiteit en variatie, die laat zien op welke manier de film als nieuw medium een vorm vond binnen de toenmalige visuele cultuur.

**Ubiquitous Computing** Stefan Poslad,2011-08-10 This book provides an introduction to the complex field of ubiquitous computing Ubiquitous Computing (also commonly referred to as Pervasive Computing) describes the ways in which current technological models, based upon three base designs: smart (mobile, wireless, service) devices, smart environments (of embedded system devices) and smart interaction (between devices), relate to and support a computing vision for a greater range of computer devices, used in a greater range of (human, ICT and physical) environments and activities. The author details the rich potential of ubiquitous computing, the challenges involved in making it a reality, and the prerequisite technological infrastructure. Additionally, the book discusses the application and convergence of several current major and future computing trends. Key Features: Provides an introduction to the complex field of ubiquitous computing Describes how current technology models based upon six different technology form factors which have varying degrees of mobility wireless connectivity and service volatility: tabs, pads, boards, dust, skins and clay, enable the vision of ubiquitous computing Describes and explores how the three core designs (smart devices, environments and interaction) based upon current technology models can be applied to, and can evolve to, support a vision of ubiquitous computing and computing for the future Covers the principles of the following current technology models, including mobile wireless networks, service-oriented computing, human computer interaction, artificial intelligence, context-awareness, autonomous systems, micro-electromechanical systems, sensors, embedded controllers and robots Covers a range of interactions, between two or more UbiCom devices, between devices and people (HCI), between devices and the physical world. Includes an accompanying website with PowerPoint slides, problems and solutions, exercises, bibliography and further reading Graduate students in computer science, electrical engineering and telecommunications courses will find this a fascinating and useful introduction to the subject. It will also be of interest to ICT professionals, software and network developers and others interested in future trends and models of computing and interaction over the next decades.
