Advances in Dependability Engineering of Complex Systems Wojciech Zamojski, Jacek

Mazurkiewicz, Jarosław Sugier, Tomasz

Walkowiak, Janusz Kacprzyk, 2017-05-29 This book gathers the proceedings of the 2017 DepCoS-RELCOMEX, an annual conference series that has been organized by the Department of Computer Engineering at the Faculty of Electronics, Wrocław University of Science and Technology, since 2006. Its mission is to continue the heritage of the other two cycles of events – the RELCOMEX conferences (1977-89) and Microcomputer Schools (1985-95) – so this year we can celebrate the 40th anniversary of its origins. In contrast to those preceding series, which were focused on conventional reliability analysis, the goal of DepCoS is to promote a more comprehensive approach to system performability, which is now commonly called dependability. This innovative research area provides answers to the latest challenges in reliability evaluation for contemporary complex systems. Its novelty is based on a multi-disciplinary approach to system theory, technology and maintenance of systems operating in real environments. Dependability analyses concentrate on the efficient completion of tasks, services and jobs by a system considered as a combination of technical, information and human assets, in contrast to “classical” reliability, which is

generally limited to the analysis of technical resources and associated components and structures. The selection of papers for this volume illustrates the diversity of topics that need to be considered, from mathematical models and design methodologies through software engineering and data security issues, to practical engineering problems in technical systems. In addition, this edition of the conference hosted the 7th CrISS-DESSERT Workshop, which was devoted to the analysis and assurance of safety and cyber security in critical infrastructure and computer systems.

Dependability Engineering and Complex Systems
Wojciech Zamojski, Jacek Mazurkiewicz, Jarosław Sugier, Tomasz Walkowiak, Janusz Kacprzyk, 2016-06-17
These proceedings present the results of the Eleventh International Conference on Dependability and Complex Systems DepCoS-RELCOMEX which took place in a picturesque Brunów Palace in Poland from 27th June to 1st July, 2016. DepCoS-RELCOMEX is a series of international conferences organized annually by Department of Computer Engineering of Wrocław University of Science and Technology since 2006. The roots of the series go as far back as to the seventies of the previous century – the first RELCOMEX conference took place in 1977 – and now its main aim is to promote a multi-disciplinary approach to dependability problems in theory and engineering practice of complex systems. Complex systems, nowadays most often computer-based and distributed, are built upon a variety of technical, information, software and human resources. The challenges in their design, analysis and maintenance not only originate from the involved technical and organizational structures but also from the complexity of the information processes that must be efficiently executed in a diverse, often hostile operational environment. Traditional methods of reliability

evaluation focused only on technical resources are usually insufficient in this context and more innovative, multidisciplinary methods of dependability analysis must be applied. The diversity of the topics which need to be considered is well illustrated by the selection of the submissions in these proceedings with their subjects ranging from mathematical models and design methodologies through software engineering and data security issues up to practical problems in technical, e.g. transportation, systems.

Cosmic Citizens and Moonshot Thinking Rohan

Roberts,2018-08-16 From award-winning educator,

innovation expert, and Global Teacher Prize finalist, Rohan Roberts, comes a provocative look at why our current education system is not fit for purpose and why we need to overhaul it. *Cosmic Citizens and Moonshot Thinking: Education in an Age of Exponential Technologies* takes a fresh approach to what we need to do differently to prepare our children for a world of exponential technologies, disruptive innovations, and ubiquitous A.I. In this groundbreaking book, Roberts outlines the purpose of education in a world of increased outsourcing and automation and explains how we can future-proof our youth to survive and thrive in a world of accelerating change. Through interactions with corporate leaders, interviews with principals, meetings with parents, and surveys of students, this book considers how the best and brightest students would overhaul their education system. The book highlights the role of neuroscience in education and explores several fascinating concepts such as radical openness, abundance mindsets, the gig economy, the technological singularity, intelligent optimism, the age of imagination, humanics, transhumanism, and the importance of Enlightenment values as we advance into the 21st Century. Underpinning this book is a constant focus on the importance of bringing a sense of awe into education and fostering a sense of cosmic wonder when contemplating human purpose and human existence. Written in a style that is discursive, contemplative, and with a sense of urgency, this book will appeal to students, parents, teachers, school principals, and to anyone who recognises that the only real and long-lasting way to create a better society is to first fix our education system.

Quantum Field Theory: A Tourist Guide for

Mathematicians Gerald B. Folland, 2021-02-03

Quantum field theory has been a great success for physics, but it is difficult for mathematicians to learn because it is mathematically incomplete. Folland, who is a mathematician, has spent considerable time digesting the physical theory and sorting out the mathematical issues in it. Fortunately for mathematicians, Folland is a gifted expositor. The purpose of this book is to present the elements of quantum field theory, with the goal of understanding the behavior of elementary particles rather than building formal mathematical structures, in a form that will be comprehensible to mathematicians. Rigorous definitions and arguments are presented as far as they are available, but the text proceeds on a more informal level when necessary, with due care in identifying the difficulties. The book begins with a review of classical physics and quantum mechanics, then proceeds through the construction of free quantum fields to the perturbation-theoretic development of interacting field theory and renormalization theory, with emphasis on quantum electrodynamics. The final two chapters present the functional integral approach and the elements of gauge field theory, including the Salam-Weinberg model of electromagnetic and weak interactions.
