Application Acceleration and WAN Optimization

Fundamentals Ted Grevers Jr., Joel Christner CCIE No.

15311, 2012-01-10 IT organizations face pressure to increase productivity, improve application performance, support global collaboration, improve data protection, and minimize costs. In today's WAN-centered environments, traditional LAN-oriented infrastructure approaches are insufficient to meet these goals. Application Acceleration and WAN Optimization Fundamentals introduces a better solution: integrating today's new generation of accelerator solutions to efficiently and effectively scale networks beyond traditional capabilities while improving performance and minimizing costs through consolidation. Ted Grevers and Joel Christner begin by reviewing the challenges network professionals face in delivering applications to globally distributed workforces. You learn how accelerators are transforming application business models, enabling IT departments to centralize and consolidate resources while also delivering consistently superior performance. Grevers and Christner show how to identify network consumers, prioritize traffic, and guarantee appropriate throughput and response times to business-critical applications. You learn how to use quality of service techniques such as packet classification and marking and traffic policing, queuing, scheduling, and shaping. Next, you compare options for

integrating accelerators and optimization services into your network and for optimizing content delivery. The authors show how to address application protocol-related performance problems that cannot be resolved through compression or flow optimization alone. In the final chapter, the authors walk you through several real-world scenarios for utilizing accelerator technology. Ted Grevers, Jr., is the solution manager for the Cisco® Video IPTV Systems Test and Architecture (C-VISTA) team. He has extensive experience in the content delivery network (CDN) market, focusing on enterprise and service provider content delivery and application optimization needs. Joel Christner, CCIE® No. 15311, is the manager of technical marketing for the Cisco Application Delivery Business Unit (ADBU). He has extensive experience with application protocols, acceleration technologies, LAN/WAN infrastructure, and storage networking. Grevers and Christner are key contributors to the design and architecture of Cisco application delivery and application acceleration solutions.

Provide high-performance access to remote data, content, video, rich media, and applications Understand how accelerators can improve network performance and minimize bandwidth consumption Use NetFlow to baseline application requirements and network utilization Ensure network resources are allocated based on business priorities Identify performance barriers arising from networks, protocols, operating systems, hardware, file systems, and applications Employ application-specific acceleration components to mitigate the negative impact of latency and bandwidth consumption Integrate content delivery networks (CDN) to centrally manage the acquisition, security, and distribution of content to remote locations Leverage WAN optimization technologies to improve application throughput, mitigate the impact of

latency and loss, and minimize bandwidth consumption

Content Delivery Networks Dom

Robinson,2017-06-20 The definitive guide to developing
robust content delivery networks This book examines the
real-world engineering challenges of developing robust
content delivery networks (CDNs) and provides the tools
required to overcome those challenges and to ensure high-
quality content delivery that fully satisfies operators' and
consumers' commercial objectives. It is informed by the
author's two decades of experience building and delivering
large, mission-critical live video, webcasts, and radio
streaming, online and over private IP networks. Following an
overview of the field, the book cuts to the chase with in-
depth discussions—laced with good-natured humor—of a
wide range of design considerations for different network
topologies. It begins with a description of the author's own
requirement filtration processes. From there it moves on to
initial sketches, through considerations of stakeholder roles
and responsibilities, to the complex challenges of managing
change in established teams. Agile versus waterfall
considerations within large blue chip companies, security,
commercial models, and value chain alignment are
explored in detail. Featured throughout the book are
numerous what if scenarios that help provide a clear picture
of the wide spectrum of practical contexts for which readers
may be tasked with building and implementing a CDN. In
addition, the book: Discusses delivery of live, catch-up,

scheduled on-demand, TVOD and SVOD Offers insights into the decisions that can to be made when architecting a content distribution system over IP-based networks Covers CDN topologies, including Edge-Caching, Streaming-Splitting, Pure-Play, Operator, Satellite, and Hybrid Examines computer hosting and orchestration for dedicated appliances and virtualization Includes real-world cases covering everything from IETF, regulatory considerations, and policy formation, to coding, hardware vendors, and network operators Considers the future of CDN technologies and the market forces driving its evolution Written by a back-room engineer for back-room engineers, Content Delivery Networks gets readers up to speed on the real-world challenges they can face as well as tried-and-true strategies for addressing those challenges in order to ensure the delivery of the high-quality content delivery networks that clients demand and users expect.
