It's not the how that's important, but the who and the what. Who you are as a person has a direct impact on what you capture as a photographer. Whether you are an amateur or professional, architect or acupuncturist, physician or photographer, this guide provides inspiration, simple techniques, and assignments to boost your creative process and improve your digital images using natural light without additional gear. When She Woke Hillary Jordan, 2011-10-04 In the mid-21st century, a young woman in Texas awakens to a nightmare: her skin has been genetically altered, turned bright red as punishment for the crime of having an abortion. A powerful reimagining of *The Scarlet Letter*, *When She Woke* is a timely fable about a stigmatized woman struggling to navigate an America of the not-too-distant future, where the line between church and state has been eradicated, and convicted felons are no longer imprisoned

and rehabilitated but “chromed” and released back into the population to survive as best they can. In seeking a path northward to safety, through an alien and hostile world, Hannah unknowingly embarks on a journey of self-discovery that forces her to question the values she once held true and the righteousness of a country that politicizes faith and love.

**Solid Freeform Fabrication: A New Direction in Manufacturing** J.J. Beaman, John W. Barlow, D.L. Bourell, R.H. Crawford, H.L. Marcus, K.P. McAlea, 2013-11-27 Solid Freeform Fabrication is a set of manufacturing processes that are capable of producing complex freeform solid objects directly from a computer model of an object without part-specific tooling or knowledge. In essence, these methods are miniature manufacturing plants which come complete with material handling, information processing and materials processing. As such, these methods require technical knowledge from many disciplines;

therefore, researchers, engineers, and students in Mechanical, Chemical, Electrical, and Manufacturing Engineering and Materials and Computer Science will all find some interest in this subject. Particular subareas of concern include manufacturing methods, polymer chemistry, computational geometry, control, heat transfer, metallurgy, ceramics, optics, and fluid mechanics. History of technology specialists may also find Chapter 1 of interest. Although this book covers the spectrum of different processes, the emphasis is clearly on the area in which the authors have the most experience, thermal laser processing. In particular, the authors have all been developers and inventors of techniques for the Selective Laser Sintering process and laser gas phase techniques (Selective Area Laser Deposition). This is a research book on the subject of Solid Freeform Fabrication.
