**The Semantics of Grammar** Anna Wierzbicka, 1988-01-01 The semantics of grammar presents a radically semantic approach to syntax and morphology. It offers a methodology which makes it possible to demonstrate, on an empirical basis, that syntax is neither autonomous nor arbitrary, but that it follows from semantics. It is shown that every grammatical construction encodes a certain semantic structure, which can be revealed and rigorously stated, so that the meanings encoded in grammar can be compared in a precise and illuminating way, within one language and across language boundaries. The author develops a semantic metalanguage based on lexical universals or near-universals (and, ultimately, on a system of universal semantic primitives), and shows that the same semantic metalanguage can be used for explicating lexical, grammatical and pragmatic aspects of language and thus offers a method for an integrated linguistic description based on semantic foundations. Analyzing data from a number of different languages (including English, Russian and Japanese) the author explores the notion of ethnosyntax and, via semantics, links syntax and morphology with culture. She attempts to demonstrate that the use of a semantic metalanguage based on lexical universals makes it possible to rephrase the Humboldt-Sapir-Whorf hypothesis in such a way that it can be tested and treated as a program for empirical research.

The Recycling Universe Star Theory James Keith Leedy, 2022-08-01 After golden sunsets, early cavemen sat around amber campfires in the twilight, serenely pondering diamond stars reaching above moonlit nights. Clouds bring rain and thunder as seasons change. Can mankind's fate be on the brink of extinction? Or will we survive? Elsewhere in the cosmos, is there life? Is there God? Questions cultures strive to explicate thru millennia. Did the answers vanish? Searching for reasons, does the truth reappear? Written in the stars, illumining the heavens for all time! Distinguishing destiny, illustrating explanations meant to uncover the reality on a spiritually guided tour with soaring wings of wisdom in a wonderfully realistic star theory. Pieces of the puzzle plummet into place! The Recycling Universe star theory consistently adheres to crucial astrophysics, unveiling cosmic universal laws of eternal creation. This is the theory that the world is waiting on unlocking the secrets of the universe! Hereafter understanding Recycling Universe theory, it is virtually impossible to see the cosmos in the same old-fashioned way. Compellingly painting the picture that mainly makes sense, a modern and most magnificent masterpiece. RU-1 of the many marvelous manifestos of miracles meant for the majesty of all mankind and for mysteries of all man's time?

The 21st Century from the Positions of Modern Science: Intellectual, Digital and Innovative Aspects Elena G. Popkova, Bruno S. Sergi, 2019-11-02 These proceedings gather the best papers presented at the "10th International Scientific and Practical Conference – the 21st Century from the Positions of Modern Science: Intellectual, Digital and Innovative Aspects," which was organized by the non-profit organization "Institute of Scientific Communications." The conference took place on May 23–24 in Nizhny Novgorod, Russia, with support from Minin Nizhny Novgorod State Pedagogical University. The chief advantage of these proceedings are their multidisciplinary character – they include articles and empirical studies addressing various fields, including economics, the social sciences, and law. Accordingly, the target audience is broad, covering scholars, researchers, independent experts, entrepreneurs, and government workers, who are interested in issues concerning: measuring and accelerating socio-economic development; the formation and evolution of the digital society and digital economy; the role of economic systems and economic subjects in the 21st-century technological revolution (the fourth industrial revolution); development and implementation of AI; development and application of intellectual resources in economic activities; and innovations in the economy.

**Ethics in Islam** Nuha Al-Shaar, 2014-12-05 Offering a new reading of Islamic ethical and political thought in the Būyid period (334-440/946-1048), this book focuses particularly on the philosopher Abū Hayyān al-Tawhīdī who lived in Baghdad and what is now western Iran. Ethics in Islam provides the first major treatment of al-Tawhīdī's ethics, political thought, and social idealism, investigating the complex influences that shaped this thought and especially his concept of friendship, which is analysed in the unique context of Būyid society. Al-Tawhīdī revives the value of friendship in politics. He introduces it as the best way to reform social and political order and as a means to the good life, to restrain passion and self-interest, to bring about cooperation and promote reason, and for action in opposition to religious zeal. Instead of seeing him as alienated from society, supposedly rejecting traditional Muslim beliefs, this book places him in his historical and intellectual contexts, and shows that while he was original in many ways, his outlook was firmly rooted in the Islamic culture in which he was educated. Contributing to modern discussions of Islam and political ethics, this book is of interest to scholars and researchers of political philosophy, comparative ethical thought and Islamic studies.
