Instruments for Clinical Health-care Research Marilyn Frank-Stromborg, Sharon J. Olsen, 2004 Instruments for Clinical Health-Care Research, Third Edition will facilitate researching clinical concepts and variables of interest, and will enhance the focus on linking clinical variable assessment with routine measurement of everyday clinical interventions.

User's Manual for the Medical Outcomes Study (MOS) Core Measures of Health-related Quality of Life Ron D. Hays, Cathy Donald Sherbourne, Rebecca M. Mazel, 1995 This manual describes self-administered patient questionnaires that were developed for patients participating in the Medical Outcomes Study.

Measuring Functioning and Well-being Anita L. Stewart, John E. Ware, 1992 Measuring Functioning and Well-Being is a comprehensive account of a broad range of self-reported functioning and well-being measures developed for the Medical Outcomes Study, a large-scale study of how patients fare with health care in the United States. This book provides a set of ready-to-use generic measures that are applicable to all adults, including those well and chronically ill, as well as a methodological guide to collecting health data and constructing health measures. As demand increases for more practical methods to monitor the outcomes of health care, this volume offers a timely and valuable contribution to the field. The contributors address conceptual and methodological issues involved in measuring such important health status concepts as: physical, social, and role functioning; psychological distress and well-being; general health perceptions; energy and fatigue; sleep; and pain. The authors present psychometric results and explain how to administer, score, and interpret the measures. Comprising the work of a number of highly respected scholars in the field of health assessment, Measuring Functioning and Well-Being will be of great interest and value to the growing number of researchers, policymakers, and clinicians concerned with the management and evaluation of health care.

Sustainability in Energy and Buildings 2018 Prasad Kaparaju, Robert J. Howlett, John Littlewood, Chandima Ekanyake, Ljubo Vlacic, 2018-11-30 This book contains selected papers from SEB-18, the Tenth International Conference on Sustainability in Energy and Buildings, which was organised by KES International and Griffith University and held in Gold Coast, Australia in June 2018. SEB-18 invited contributions on a range of topics related to sustainable buildings and renewable energy, and explored innovative topics regarding intelligent buildings and cities. Applicable areas included the sustainable design and of buildings, neighbourhoods and cities (built and natural environment); optimisation and modelling techniques; smart energy systems for smart cities; green information communications technology; and a broad range of solar, wind, wave and other renewable energy topics. The aim of the conference was to bring together researchers and government and industry professionals to discuss the future of energy in buildings, neighbourhoods and cities from a theoretical, practical, implementation and simulation perspective. In addition, SEB-18 offered an exciting opportunity to present, interact, and learn about the latest research in Sustainability in Energy and Buildings.

Beyond Myalgic Encephalomyelitis/Chronic Fatigue Syndrome Institute of Medicine, Board on the Health of Select Populations, Committee on the Diagnostic Criteria for Myalgic Encephalomyelitis/Chronic Fatigue Syndrome, 2015-03-16 Myalgic encephalomyelitis (ME) and chronic fatigue syndrome (CFS) are serious, debilitating conditions that affect millions of people in the United States and around the world. ME/CFS can cause significant impairment and disability. Despite substantial efforts by researchers to better understand ME/CFS, there is no known cause or effective treatment. Diagnosing the disease remains a challenge, and patients often struggle with their illness for years before an identification is made. Some health care

providers have been skeptical about the serious physiological - rather than psychological - nature of the illness. Once diagnosed, patients often complain of receiving hostility from their health care provider as well as being subjected to treatment strategies that exacerbate their symptoms. Beyond Myalgic Encephalomyelitis/Chronic Fatigue Syndrome proposes new diagnostic clinical criteria for ME/CFS and a new term for the illness - systemic exertion intolerance disease(SEID). According to this report, the term myalgic encephalomyelitis does not accurately describe this illness, and the term chronic fatigue syndrome can result in trivialization and stigmatization for patients afflicted with this illness. Beyond Myalgic Encephalomyelitis/Chronic Fatigue Syndrome stresses that SEID is a medical - not a psychiatric or psychological - illness. This report lists the major symptoms of SEID and recommends a diagnostic process. One of the report's most important conclusions is that a thorough history, physical examination, and targeted work-up are necessary and often sufficient for diagnosis. The new criteria will allow a large percentage of undiagnosed patients to receive an accurate diagnosis and appropriate care. Beyond Myalgic Encephalomyelitis/Chronic Fatigue Syndrome will be a valuable resource to promote the prompt diagnosis of patients with this complex, multisystem, and often devastating disorder; enhance public understanding; and provide a firm foundation for future improvements in diagnosis and treatment.

Measuring Health: a Review of Subjective Health, Well-Being and Quality of Life Measurement Scales Ann Bowling,2017-01-16 An invaluable resource for health professionals and students engaged in research, this thoroughly updated edition provides a guide to the major measures of health and functioning. Measures of subjective health, well-being and quality of life are introduced along with analysis of their validity and reliability and the evidence for using each one. Throughout the book each measure is explained with a summary of how each one is scored and used, making this a one-stop guide to understanding health measurements, and the basic concepts behind measuring health, quality of life and well-being. • A new look and feel makes measures and scales easier to locate • Further research and evidence provides a greater critique of the measures • Useful source information to help you access each measure with permission • The addition of new scales include the Warwick-Edinburgh Wellbeing Scale, the Older People's Quality of Life Scale and the Short-Form McGill Pain Questionnaire • Expanded material on functional independence and functional assessment measures Written by a renowned expert in health research, *Measuring Health*, 4th edition is essential reading for researchers and upper level undergraduates and postgraduates in health services research, health studies, health sciences, public health and social sciences. The world of measurement scales, which ones to use and for what purpose, is a complex one even for experienced qualitative researchers. It is easy for less experienced researchers to lose their way. Ann Bowling's book provides an up to date and coherent guide and assessment of measurement tools which

is comprehensible and well organised. Virginia Berridge, Professor of History and Director, Centre for History in Public Health, London School of Hygiene and Tropical Medicine, UK In her latest edition of *Measuring Health: A Review of Subjective Health, Well-Being and Quality of Life Measurement Scales*, Professor Ann Bowling has, once again, provided us with an essential for our bookshelves. It is a vital resource for anyone investigating health and well-being – whether novice student researcher or experienced academic. Written in an accessible, easy to use style, we are initially taken through the importance of measuring and understanding lay people's experiences of their physical and social health. The mechanics and challenges of measurement of subjective health are then described. Later chapters include handy definitions of relevant concepts and detailed descriptions of specific scales – both familiar and relatively new ones – including psychometric testing and use. This text is packed with useful information and can be used both as a resource for an overall understanding of measuring health and well-being or for selecting specific patient-based health scales for research projects. Dr. Nan Greenwood, Reader in Health and Social Care Service Research, St George's University of London and Kingston University, UK

The Measurement of Health and Health Status Paul Krabbe, 2016-10-07 The *Measurement of Health and Health Status: Concepts, Methods and Applications from a Multidisciplinary Perspective* presents a unifying perspective on how to select the best measurement framework for any situation. Serving as a one-stop shop that unifies material currently available in various locations, this book illuminates the intuition behind each method, explaining how each method has special purposes, what developments are occurring, and how new combinations among methods might be relevant to specific situations. It especially emphasizes the measurement of health and health states (quality-of-life), giving significant attention to newly developed methods. The book introduces technically complex, new methods for both introductory and technically-proficient readers. Assumes that the best measure depends entirely on the situation Covers preference-based methods, classical test theory, and item response theory Features illustrations and animations drawn from diverse fields and disciplines

Translation of the RAND 36-item Health Survey 1.0 (aka SF-36) Into Arabic Saud Abdulaziz Al Abdulmohsin, 1997 The objectives of this research were to: (1) translate the RAND 36-Item Health Survey 1.0 (aka SF-36) into Arabic; (2) evaluate the reliability and equivalence of the Arabic and English versions in a sample of Saudi Arabian citizens; and (3) assess the health status of a sample of Saudi Arabian citizens using both the Arabic and English versions. Forward and backward translation of the SF-36 with committee review was performed. Both the Arabic and English versions of the survey were administered to a convenience sample of bilingual (English and Arabic) Saudi citizens (N=415) at Saudi ARAMCO Company, Dhahran, Saudi Arabia. Internal consistency, equivalent-forms, and test-retest reliability were estimated for the Arabic and English versions of the survey. The results of the study provide support for the reliability and equivalence of both versions. Additional studies are needed with a representative sample of the general Saudi population to further assess the psychometric properties of the Arabic version.

Encyclopedia of Quality of Life and Well-Being Research Alex C. Michalos, 2014-02-12 The aim of this encyclopedia is to provide a comprehensive reference work on scientific and other scholarly research on the quality of life, including health-related quality of life research or also called patient-reported outcomes research. Since the 1960s two overlapping but fairly distinct research communities and traditions have developed concerning ideas about the quality of life, individually and collectively, one with a fairly narrow focus on health-related issues and one with a quite broad focus. In many ways, the central issues of these fields have roots extending to the observations and speculations of ancient philosophers, creating a continuous exploration by diverse explorers in diverse historic and cultural circumstances over several centuries of the qualities of human existence. What we have not had so far is a single, multidimensional reference work connecting the most salient and important contributions to the

relevant fields. Entries are organized alphabetically and cover basic concepts, relatively well established facts, lawlike and causal relations, theories, methods, standardized tests, biographic entries on significant figures, organizational profiles, indicators and indexes of qualities of individuals and of communities of diverse sizes, including rural areas, towns, cities, counties, provinces, states, regions, countries and groups of countries.

Journal of the National Cancer Institute, 2012

Measuring Health Ian McDowell, 2006-03-09 Worldwide economic constraints on health care systems have highlighted the importance of evidence-based medicine and evidence-based health policy. The resulting clinical trials and health services research studies require instruments to monitor the outcomes of care and the output of the health system. However, the over-abundance of competing measurement scales can make choosing a measure difficult at best. *Measuring Health* provides in-depth reviews of over 100 of the leading health measurement tools and serves as a guide for choosing among them. Now in its third edition, this book provides a critical overview of the field of health measurement, with a technical introduction and discussion of the history and future directions for the field. This latest edition updates the information on each of the measures previously reviewed, and includes a complete new chapter on anxiety measurement to accompany the one on depression. It has also added new instruments to those previously reviewed in each of the chapters in the book. Chapters cover measurements of physical disability, social health, psychological well-being, anxiety, depression, mental status testing, pain, general health status and quality of life. Each chapter presents a tabular comparison of the quality of the instruments reviewed, followed by a detailed description of each method, covering its purpose and conceptual basis, its reliability and validity and, where possible, shows a copy of the actual scale. To ensure accuracy of the information, each review has been approved by the original author of each instrument or by an acknowledged expert.
