High-speed Circuits for Lightwave Communications
Keh-Chung Wang, 1999 High speed circuits are
crucial for increasing the bandwidth of
transmission and switching of voice/video/data
over optical fiber networks. The ever-increasing
demand for bit rates higher than those available
due to the explosion of Internet traffic has
driven engineers to develop integrated circuits of
performance approaching 100 Gb/s. Commercial

lightwave products using high speed circuits of 10 Gb/s and beyond are readily available. High Speed Circuits for Lightwave Communications presents the latest information on circuit design, measured results, applications, and product development. It covers electronic and opto-electronic circuits for transmission, receiving, and cross-point switching. These circuits were implemented with various state-of-the-art IC technologies, including Si BJT, GaAs MESFET, HEMT, HBT, as well as InP HEMT and HBT. The book, written by more than 50 experts, will benefit graduate students, researchers, and engineers who are interested in or work in this exciting and challenging field of optical communications.
