Litt's Drug Eruption & Reaction Manual Neil H. Shear,2024-01-16 Litt's Drug Eruption & Reaction Manual is a succinct reference to give clinicians the essential information for an informed decision about patient management. The full database from which it is derived – Litt's Drug Eruption & Reaction database: www.drugeruptiondata.com – currently holds over 1800 drug profiles with over 73,000 documented drug reactions, as evidenced by well over 156,000 references on PubMed, and is internationally relied upon by medical practitioners for its unparalleled focus on adverse effects and cutaneous reactions. As a special offer for this 30th edition, a 12-month free access to the database is offered to buyers of a new print copy of this edition in 2024. This edition:
☐ Provides documentation of adverse reactions to the 1500 most consulted drug and herbal profiles
☐ Gives clinicians managing patients with many different medications a route to making an informed decision about problematic reactions
☐ Offers clinicians a one-stop reference for the essential information about a drug
CONTENTS:
☐ A to Z listing of the 1500 most consulted drug and herbal profiles (including supplements, vaccines, and botanicals), including generic name and trade names; pharmaceutical company; indications; half-life; and pregnancy category
☐ Descriptions of important reactions
☐ List of drugs that cause important adverse reactions
☐ List of main classes of drugs
☐ 28 tables showing reactions of members of a class of drugs (such as statins or monoclonal antibodies), enabling clinicians to see at a glance whether a reaction is common to all drugs included in that class, or to a majority of them, or is known in only a handful—information that is critical for an informed decision to change drugs within the same class
☐ 2 tables showing reported genetic associations with cutaneous adverse drug reactions and recommendations regarding genetic screening to prevent cutaneous adverse drug reactions
☐ A concordance of synonyms and trade names for ease of cross-reference

Charged-Particle Reaction List 1948–1971 F McGowan,2012-12-02 Charged-Particle Reaction List 1948–1971 is a guide to experiments on charged-particle-induced reactions that have been reported in journal literature during the period 1948 to June 1971. This compendium consists of the material from four Reaction Lists which have already appeared in Nuclear Data Tables. Each published article is listed under the target nuclei in the nuclear reactions which it treats. Reactions are denoted by A(a,b)B, where A and B are the target and residual nucleus, respectively; a is the bombarding charged particle and b is the outgoing product particle or particles. The guide also includes a brief information after the reaction designation, namely, the energy E of the bombarding projectile in MeV, a short statement of the type of data that is found in the paper, and a bibliographic information on the paper itself. A symbol THY in the extreme right-hand column denotes the theoretical papers concerned with analysis of nuclear reaction data. For papers dealing with experimental data on energy spectra, the angle of observation of the emerging reaction products, the accelerator, as well as the detector used are given for many entries under the column heading Quantity Measured. The guide will prove immensely useful for theoretical physicists, nuclear physicists, and molecular physicists.

Organic Reaction Mechanisms 1982 A. C. Knipe,W. E. Watts,2008-04-30 The only book series to summarize the latest progress on organic reaction mechanisms, Organic Reaction Mechanisms, 1982 surveys the development in understanding of the main classes of organic reaction mechanisms reported in the primary scientific literature in 1982. The 18th annual volume in this highly successful series highlights mechanisms of stereo-specific reactions. Reviews are compiled by a team of experienced editors and authors, allowing advanced undergraduates, graduate students, postdocs, and chemists to rely on the volume's continuing quality of selection and presentation.

The Polymerase Chain Reaction Kary B. Mullis,Francois Ferre,Richard A. Gibbs,2012-02-02 James D. Watson When, in late March of 1953, Francis Crick and I came to write the first Nature paper describing the double helical structure of the DNA molecule, Francis had wanted to include a lengthy discussion of the genetic implications of a molecule whose structure we had divined from a minimum of experimental data and on theoretical arguments based on physical principles. But I felt that this might be tempting fate, given that we had not yet seen the detailed evidence from King's College. Nevertheless, we reached a compromise and decided to include a sentence that pointed to the biological significance of the molecule's key feature—the complementary pairing of the bases. It has not escaped our notice, Francis wrote, that the specific pairing that we have postulated immediately suggests a possible copying mechanism for the genetic material. By May, when we were writing the second Nature paper, I was more confident that the proposed structure was at the very least substantially correct, so that this second paper contains a discussion of molecular self-duplication using templates or molds. We pointed out that, as a consequence of base pairing, a DNA molecule has two chains that are complementary to each other. Each chain could then act . . . as a template for the formation on itself of a new companion chain, so that eventually we shall have two pairs of chains, where we only had one before and, moreover, ...

Human Sperm Acrosome Reaction Patrick Fénichel,Jean Parinaud,1995 This valuable reference work provides a synthesis of the latest knowledge about the acrosomatic reaction of human sperm. The acrosomatic reaction, which is a fundamental step in the process of fertilisation, is examined on both the fundamental and clinical levels. Three very recent aspects are also dealt with: what happens to the acrosome during intracytoplasmic microinjections, the usefulness of screening spermatozoa that have completed their acrosomatic reaction, and the development of contraception by a vaccine that targets one of the proteins of the acrosome. International Symposium, Collioure, France, September 1995.

Alkali-aggregate Reaction in Concrete Roads and Bridges Graham West,1996 This book provides a sound understanding of the alkali-aggregate reaction and how it affects the design, construction and maintenance of concrete roads and bridges. It draws on examples from the UK and around the world to relate experience of damage caused by this reaction and how the problems have been investigated and treated.

1,4-Cycloaddition Reaction: The Diels-Alder Reaction in Heterocyclic Syntheses Jan Hamer,2013-07-19 Organic Chemistry, Volume 8: 1,4-Cycloaddition Reactions: The Diels-Alder Reaction in Heterocyclic Syntheses describes 1,4-cycloaddition reactions leading to the formation of five- or six-membered heterocyclic compounds. Divided into 13 chapters, this book starts with an overview of various 1,4-cycloaddition reaction equations in the presence of at least one atom other than carbon. The following chapters describe the reaction mechanisms of five- or six-membered ring formed upon reaction with a dienophile, which contains an atom other than carbon. Considerable chapters are devoted to compounds used as dienophiles, including trivalent phosphorus, cyanogens and cyanogens-like compounds, imino, azo, carbonyl, thiocarbonyl, and diene compounds, as well as oxygen. Other chapters highlight some 1,4-cycloaddition reactions taking place through free radical intermediates. This book is of value to organic and research chemists, as well as undergraduate and graduate organic chemistry students.

Dynamics of Surfaces and Reaction Kinetics in Heterogeneous Catalysis G.F. Froment,K.C. Waugh,1997-09-03 Many processes of the chemical industry are based upon heterogeneous catalysis. Two important items of these processes are the development of the catalyst itself and the design and optimization of the reactor. Both aspects would benefit from rigorous and accurate kinetic modeling, based upon information on the working catalyst gained from classical steady state experimentation, but also from studies using surface science techniques, from quantum chemical calculations providing more insight into possible reaction pathways and from transient experimentation dealing with reactions and reactors. This information is seldom combined into a kinetic model and into a quantitative description of the process. Generally the catalytic aspects are dealt with by chemists and by physicists, while the chemical engineers are called upon for mechanical aspects of the reactor design and its control. The symposium Dynamics of Surfaces and Reaction Kinetics in Heterogeneous Catalysis aims at illustrating a more global and concerted approach through a number of prestigious keynote lectures and severely screened oral and poster presentations.
