**Distributed Computing and Artificial Intelligence, Special Sessions I, 20th International Conference** Rashid Mehmood,Victor Alves,Isabel Praça,Jarosław Wikarek,Javier Parra-Domínguez,Roussanka Loukanova,Ignacio de Miguel,Tiago Pinto,Ricardo Nunes,Michela Ricca,2023-07-25 The present book brings together experience, current work, and promising future trends associated with distributed computing, artificial intelligence, and their application in order to provide efficient solutions to real problems. DCAI 2023 is a forum to present applications of innovative techniques for studying and solving complex problems in artificial intelligence and computing areas. This year’s technical program presents both high quality and diversity, with contributions in well-established and evolving areas of research. Specifically, 108 papers were submitted, by authors from 31 different countries representing a truly “wide area network” of research activity. The DCAI’23 technical program has selected 50 full papers in the Special Sessions (ASET, AIMP, AI4CS, CLIRAI, TECTONIC, PSO-ML, SmartFoF, IoTalentum) and, as in past editions, it will be special issues in ranked journals. This symposium is organized by the LASI and Centro Algoritmi of the University of Minho (Portugal). The authors like to thank all the contributing authors, the members of the Program Committee, National Associations (AEPIA, APPIA), and the sponsors (AIR Institute).

**Intelligent Autonomous Systems 17** Ivan Petrovic,Emanuele Menegatti,Ivan Marković,2023-01-17 “IAS has been held every two years since 1986 providing venue for the latest accomplishments and innovations in advanced intelligent autonomous systems. New technologies and application domains continuously pose new challenges to be overcome in order to apply intelligent autonomous systems in a reliable and user-independent way in areas ranging from industrial applications to professional service and household domains. The present book contains the papers presented at the 17th International Conference on Intelligent Autonomous Systems (IAS-17), which was held from June 13–16, 2022, in Zagreb, Croatia. In our view, 62 papers, authored by 196 authors from 19 countries, are a testimony to the appeal of the conference considering travel restrictions imposed by the COVID-19 pandemic. Our special thanks go to the authors and the reviewers for their effort—the results of their joint work are visible in this book. We look forward to seeing you at IAS-18 in 2023 in Suwon, South Korea!”

**Technology and Applications of Autonomous Underwater Vehicles** Gwyn Griffiths,2002-11-28 The oceans are a hostile environment, and gathering information on deep-sea life and the seabed is incredibly difficult. Autonomous underwater vehicles are robot submarines that are revolutionizing the way in which researchers and industry obtain data. Advances in technology have resulted in capable vehicles that have made new discoveries on how th

Virtual Realities Guido Brunnett,Sabine Coquillart,Robert van Liere,Gregory Welch,Libor Váša,2015-03-31 Virtual reality (VR) is a multidisciplinary area of research aimed at interactive human–computer-mediated simulations of artificial environments. An important aspect of VR-based systems is the stimulation of the human senses – usually sight, sound, and touch – in such a way that a user feels a sense of presence in the virtual environment. Sometimes it is important to combine real and virtual objects in the same real or virtual environment. This approach is often referred to as augmented reality (AR), when virtual objects are integrated into a real environment. Typical VR applications include simulation, training, scientific visualization, and entertainment, whereas typical AR applications include computer-aided manufacturing or maintenance and computer-aided surgery or medicine. This book comprises a collection of research and position papers presented at Dagstuhl Seminar 13241 on Virtual Realities, held at Schloss Dagstuhl, Germany, in June 2013. The 13 papers in this volume were carefully reviewed and selected from 18 submissions. They are organized in topical sections on: VR environments; interactions and user experience; virtual humans; and tele-existence.

**Underwater Worlds** Will Abberley,2019-01-15 Underwater Worlds throws open a new area in the emerging field of “blue” environmental humanities by exploring how subaqueous environments have been imagined and represented across cultures and media. The collection pursues this theme through various disciplinary perspectives and methodologies, including history, literary and film criticism, myth studies, legal studies and the history of art. The essays suggest that, since the nineteenth century, technologies of underwater exploration have generated novel sensory experiences that have destabilized conventional modes of representation and influenced new aesthetic forms from fiction and television to virtual reality. The collection also examines how representations of underwater environments have reflected and critiqued humans’ relationships with marine ecology and life-forms. It reflects on the deeper cultural and symbolic resonances of mythical figures such as mermaids, sea monsters and the ghosts of drowned seafarers. The contributions further reveal myriad political, ideological, gendered and racial dimensions of representing underwater environments.

**The Coral Triangle** Chris Leidy,2020-05-01 Take a breathtaking plunge into the colorful world of the Coral Triangle, the waters that cradle Indonesia, Malaysia, the Philippines, Papua New Guinea, the Solomon Islands and Timor-Leste. One of the world’s most mature reef networks, home to 30 percent of all the world’s coral, this magnificent marine expanse boasts the highest diversity of coral and fish species on the planet. Underwater photographer Chris Leidy beautifully captures a vision of this wonderland through his lens and conveys the inherent complexities of each singular, fleeting scene, illustrating the vital magic of the Coral Triangle.

*An Introduction to Veterinary Medicine Engineering* Nadja Bressan,Catherine M. Creighton,2023-04-18 Do cephalopods change color when under distress? Is the reptilian heart analogous to a diaphragm positive displacement pump? Are digital twins the answer for animal experimentation? This book explores the new field of veterinary engineering science and discusses how to better measure vital signs in exotic and companion animals. A vast opportunity exists for developing novel technologies that target reductions to the number of invasive procedures patients are subjected to. We examine improvements to animal care and enhancement of animal welfare while creating a more sustainable veterinary healthcare ecosystem. The authors address the challenges engineers face in designing healthcare equipment for animals and how the field of veterinary engineering contributes to traditional veterinary medicine. This book brings a novel field of engineering to train future veterinarians and engineers on design and application of technology to veterinary medicine. Serves as a learning resource for the training and education of veterinary students, veterinarians and engineers Demonstrates through experiments and case studies the merging point between engineering and veterinary medicine Discusses concepts and issues associated with engineering and

veterinary medicine Illustrates veterinary challenges using an engineering-design approach Provides examples of veterinary applications with successful outcomes, incorporating step-by-step directions for engineers

**Measuring Ocean Currents** Antony Joseph,2013-08-12 Measuring Ocean Currents: Tools, Technologies, and Data covers all major aspects of ocean current measurements in view of the implications of ocean currents on changing climate, increasing pollution levels, and offshore engineering activities. Although more than 70% of the Earth is covered by ocean, there is limited information on the countless fine- to large-scale water motions taking place within them. This book fills that information gap as the first work that summarizes the state-of-the-art methods and instruments used for surface, subsurface, and abyssal ocean current measurements. Readers of this book will find a wealth of information on Lagrangian measurements, horizontal mapping, imaging, Eulerian measurements, and vertical profiling techniques. In addition, the book describes modern technologies for remote measurement of ocean currents and their signatures, including HF Doppler radar systems, satellite-borne sensors, ocean acoustic tomography, and more. Crucial aspects of ocean currents are described in detail as well, including dispersion of effluents discharged into the sea and transport of beneficial materials—as well as environmentally hazardous materials—from one region to another. The book highlights several important practical applications, showing how measurements relate to climate change and pollution levels, how they affect coastal and offshore engineering activities, and how they can aid in tsunami detection. Coverage of measurement, mapping and profiling techniques Descriptions of technologies for remote measurement of ocean currents and their signatures Reviews crucial aspects of ocean currents, including special emphasis on the planet-spanning thermohaline circulation, known as the ocean's conveyor belt, and its crucial role in climate change

*Encyclopedia of Natural Resources - Water and Air - Vol II* Yeqiao Wang,2014-07-23 With unprecedented attention on global change, the current debate revolves around the availability and sustainability of natural resources and how to achieve equilibrium between what society demands from natural environments and what the natural resource base can provide. A full understanding of the range of issues, from the consequences of the changing resource bases to the degradation of ecological integrity and the sustainability of life, is crucial to the process of developing solutions to this complex challenge. Authored by world-class scientists and scholars, The Encyclopedia of Natural Resources provides an authoritative reference on a broad spectrum of topics such as the forcing factors and habitats of life; their histories, current status, and future trends; and their societal connections, economic values, and management. The content presents state-of-the-art science and technology development and perspectives of resource management. Written and designed with a broad audience in mind, the entries clearly elucidate the issues for readers at all levels. In Volume II, Water includes 59 entries and Air includes 31 entries. The Water entries cover topical areas such as fresh water, groundwater, water quality and watersheds, ice and snow, coastal environments, and marine resources and economics. The Air entries cover air pollutants, atmospheric oscillation, circulation patterns and atmospheric water storage, as well as agroclimatology, climate change, and extreme events. Additional topics in meteorology include acid rain, drought, ozone depletion, water storage, and more. Natural resources represent such a broad scope of complex and challenging topics that a reference book must cover a vast number of subjects in order to be titled an encyclopedia.
