**Cut in Alabaster** Kim Woods, 2018-09 While marble is associated with Renaissance Italy, alabaster was the material commonly used elsewhere in Europe and has its own properties, traditions and meanings. It enjoyed particular popularity as a sculptural material during the two centuries 1330-1530, when alabaster sculpture was produced both for indigenous consumption and for export. Focussing especially on England, the Burgundian Netherlands and Spain, three territories closely linked through trade routes, diplomacy and cultural exchange, this book explores and compares the material practice and visual culture of alabaster sculpture in late medieval Europe. *Cut in Alabaster* charts sculpture from quarry to contexts of use, exploring practitioners, markets and functions as well as issues of consumption, display and material meanings. It provides detailed examination of tombs, altarpieces and both elite and popular sculpture, ranging from high status bespoke commissions to small, low-cost carvings produced commercially for a more popular clientele.

Engines of the Mind Joel N. Shurkin, 1996 An introduction to the feuding researchers and inventors who made the computer possible, from the huge early models to the creation of the microchip and beyond. It discusses John Mauchly and Presper Eckert who developed the Electric Numerical Integrator and Computer (ENIAC) during World War II.

**The Origins of Digital Computers** B. Randell, 2012-12-06 My interest in the history of digital computers became an active one when I had the fortune to come across the almost entirely forgotten work of PERCY LUDGATE, who designed a mechanical program-controlled computer in Ireland in the early 1940's. I undertook an investigation of his life and work, during which I began to realise that a large number of early developments, which we can now see as culminating in the modern digital computer, had been most undeservedly forgotten. Hopefully, historians of science, some of whom are now taking up the subject of the development of the computer and accumulating valuable data, particularly about the more recent events from the people concerned, will before too long provide us with comprehensive analytical accounts of the invention of the computer. The present book merely aims to bring together some of the more important and interesting written source material for such a history of computers. (Where necessary, papers have been translated into English, but every attempt has been made to retain the flavour of the original, and to avoid possibly misleading use of modern computing terminology.

1789, the Emblems of Reason Jean Starobinski, 1988 In this classic text on the 18th century and neoclassicism, Jean Starobinski pursues a subtle and brilliant meditation on the connections between art and revolution, comparing the style of the French Revolution as a political event to style in the contemporary visual arts.

**Computer Science** J. Glenn Brookshear, 2012 Computer Science: An Overview uses broad coverage and clear exposition to present a complete picture of the dynamic computer science field. Accessible to students from all backgrounds, Glenn Brookshear uses a language-independent context to encourage the development of a practical,

realistic understanding of the field. An overview of each of the important areas of Computer Science (e.g. Networking, OS, Computer Architecture, Algorithms) provides students with a general level of proficiency for future courses. The Eleventh Edition features two new contributing authors (David Smith -- Indiana University of PA; Dennis Brylow -- Marquette University), new, modern examples, and updated coverage based on current technology.

**CyberLaw** Jonathan Rosenoer, 2012-12-06 CyberLaw provides a comprehensive guide to legal issues which have arisen as a result of the growth of the Internet and World Wide Web. As well as discussing each topic in detail, the book includes extensive coverage of the relevant cases and their implications for the future. The book covers a wide range of legal issues, including copyright and trademark issues, defamation, privacy, liability, electronic contracts, taxes, and ethics. A comprehensive history of the significant legal events is also included.
