**Unitary Reflection Groups** Gustav I. Lehrer, Donald E. Taylor, 2009-08-13 A unitary reflection is a linear transformation of a complex vector space that fixes each point in a hyperplane. Intuitively, it resembles the transformation an image undergoes when it is viewed through a kaleidoscope, or an arrangement of mirrors. This book gives a complete classification of all finite groups which are generated by unitary reflections, using the method of line systems. Irreducible groups are studied in detail, and are identified with finite linear groups. The new invariant theoretic proof of Steinberg's fixed point theorem is treated fully. The same approach is used to develop the theory of eigenspaces of elements of reflection groups and their twisted analogues. This includes an extension of Springer's theory of regular elements to reflection cosets. An appendix outlines links to representation theory, topology and mathematical physics. Containing over 100 exercises, ranging in difficulty from elementary to research level, this book is ideal for honours and graduate students, or for researchers in algebra, topology and mathematical physics. Book jacket.

**Daily Reflections** A a, Aa World Services Inc, 2017-07-27 This is a book of reflections by A.A. members for A.A. members. It was first published in 1990 to fulfill a long-felt need within the Fellowship for a collection of reflections that moves through the calendar year--one day at a time. Each page contains a reflection on a quotation from A.A. Conference-approved literature, such as Alcoholics Anonymous, Twelve Steps and Twelve Traditions, As Bill Sees It and other books. These reflections were submitted by members of the A.A. Fellowship who were not professional writers, nor did they speak for A.A. but only for themselves, from their own experiences in sobriety. Thus the book offers sharing, day by day, from a broad cross section of members, which focuses on the Three Legacies of Alcoholics Anonymous: Recovery, Unity and Service. Daily Reflections has proved to be a popular book that aids individuals in their practice of daily meditation and provides inspiration to group discussions even as it presents an introduction for some to A.A. literature as a whole.

*A Reflection of Reality* Chih-p'ing Chou, Liping Yu, Joanne Chiang, 2014-08-24 A Reflection of Reality is an anthology of modern Chinese short stories designed as an advanced-level textbook for students who have completed at least three years of college-level Chinese. While many advanced-level Chinese language textbooks stress only practical communication, this textbook uses stories from well-known Chinese authors not only to enhance students' language proficiency, but also to expose students to the literature, history, and evolution of modern Chinese society. The twelve stories selected for this textbook are written by such contemporary authors as Yu Hua, Wang Anyi, and Gao Xingjian, and have appeared in various newspapers and magazines in China. Each story is filled with useful sentence structures, vocabulary, and cultural information, and is followed by an extensive vocabulary list, numerous sentence structure examples, grammar exercises, and discussion questions. The textbook also includes a comprehensive pinyin index. A Reflection of Reality will effectively improve students' Chinese language skills and their understanding of today's China. Advanced-level Chinese language textbook Selected short stories reflect contemporary Chinese society and culture Extensive vocabulary lists, sentence structure examples, grammar exercises, and discussion questions Comprehensive pinyin index

*Learning Critical Reflection* Laura Béres, Jan Fook, 2019-08-13 Learning Critical Reflection documents the actual learning experiences of social work students and practitioners. It explores how a more in-depth understanding of the process of learning, combined with an analysis of how to critically reflect, will help improve the learning process. The contributors are all professionals who have learnt, in a formalised way, how to critically reflect on their practice. They speak in depth, and with feeling, about their experiences, how downsides and upsides worked together to transform the way they understood themselves, their professional identity, and their practice. Existing literature about critical reflection is reviewed, identifying the details of learning, and pulling no punches in recognising the difficulty and complexity of becoming transformed through this learning process. The editors of this book also contribute their own reflections on learning how to teach critical reflection and include the findings of a research study conducted on students' learning. Edited by two experienced educators, this book showcases the process of learning, from the perspective of the learners, in order that educators and students, managers, supervisors, and frontline practitioners alike, may make the most of opportunities to critically reflect in both educational and workplace settings. It should be considered essential reading for social work students, practitioners, and educators.

*Modeling of Anisotropic Electromagnetic Reflection from Sea Ice* Kenneth M. Golden, 1980

**Theory of Reflection of Electromagnetic and Particle Waves** John Lekner, 2013-03-14 This book is written for scientists and engineers whose work involves wave reflection or transmission. Most of the book is written in the language of electromagnetic theory, but, as the title suggests, many of the results can be applied to particle waves, specifically to those satisfying the Schrödinger equation. The mathematical connection between electromagnetic s (or TE) waves and quantum particle waves is established in Chapter 1. The main results for s waves are translated into quantum mechanical language in the Appendix. There is also a close analogy between acoustic waves and electromagnetic p (or TM) waves, as shown in Section 1-4. Thus the book, though primarily intended for those working in optics, microwaves and radio, will be of use to physicists, chemists and electrical engineers studying reflection and transmission of particles at potential barriers. The techniques developed here can also be used by those working in acoustics, oceanography and seismology. Chapter 1 is recommended for all readers: it introduces reflection phenomena, defines the notation, and previews (in Section 1-6) the contents of the rest of the book. This preview will not be duplicated here. We note only that applied topics do appear: two examples are the important phenomenon of attenuated total reflection in Chapter 8, and the reflectivity of multilayer dielectric mirrors in Chapter 12. The subject matter is restricted to linear classical electrodynamics in non-magnetic media, and the corresponding particle analogues.

Introduction to Critical Reflection and Action for Teacher Researchers Bernie Sullivan, Máirín Glenn, Mary Roche, Caitriona McDonagh, 2016-04-28 Introduction to Critical Reflection and Action for Teacher Researchers provides crucial direction for educators looking to improve their teaching and maximise learning. While many students can grasp the basic elements of researching their practice and can write about practitioner research, some need guidance and assistance to reflect meaningfully on their teaching practice so as to articulate their educational values. This book provides this guidance. By exploring how to engage in an authentic, practical and personalised framework, the book encourages critical reflection and action on educational practice. Moving through the process of reflecting on practice, engaging in critical thinking and planning and taking action, it helps the reader to subsequently generate educational theory from their own personal learning. Examples from the authors' experiences illustrate the issues raised in each section, with 'Pause and Reflect' activities, guidelines for conducting a research project and annotated further reading available for every chapter. Introduction to Critical Reflection and Action for Teacher Researchers is based on the idea that reflection is in itself a deliberate action and something we must live - it is key to understanding our practice and is a core component of action research. This book is a valuable guide for teachers, trainee teachers and researchers interested in reflecting on and enhancing their teaching practice.

*High-resolution seismic reflection techniques for mapping coal seams from the surface* C. Melvin Lepper, 1976

**One hundred pious reflections, selected from A. Butler's Lives of the saints [by M.T. Taunton].** Alban Butler, 1870

Theory of Reflection John Lekner, 2016-01-13 This book deals with the reflection of electromagnetic and particle waves by interfaces. The interfaces can be sharp or diffuse. The topics of the book contain absorption, inverse problems, anisotropy, pulses and finite beams, rough surfaces, matrix methods, numerical methods, reflection of particle waves and neutron reflection. Exact general results are presented, followed by long wave reflection, variational theory, reflection amplitude equations of the Riccati type, and reflection of short waves. The Second Edition of the Theory of Reflection is an updated and much enlarged revision of the 1987 monograph. There are new chapters on periodically stratified media, ellipsometry,

chiral media, neutron reflection and reflection of acoustic waves. The chapter on anisotropy is much extended, with a complete treatment of the reflection and transmission properties of arbitrarily oriented uniaxial crystals. The book gives a systematic and unified treatment reflection and transmission of electromagnetic and particle waves at interfaces. It is intended for physicists, chemists, applied mathematicians and engineers, and is written in a simple direct style, with all necessary mathematics explained in the text.

**Reconceptualising Reflection in Reflective Practice** Misrah Mohamed,Radzuwan Ab Rashid,2023-05-10 This edited volume presents a model that embraces four components of reflective practice: planning, acting, reflecting and evaluating. The complexities of reflective practice are manifested through three aspects of reflection: problem-solving, action-orientedness and critical reflection. To provide practical guidance, the audience is presented with various sets of experiences within the field of education which represent different foci and criticality of reflection. The experiences are described through different lenses, from individual to groups of educators. The chapters provide a reconceptualisation of reflection which underpins an effective reflective practice. Therefore, readers are provided with information that demonstrates the different phases of reflection that make up an effective cycle of reflective practice. It is through the chapters that readers will be able to distinguish the different foci and levels of reflection, thus enabling them to engage in reflective practice more effectively. The Malaysian context that the book brings gives readers insights into a lesser-known context and its people, culture, and educational system as a whole for comparison. The book is written with the needs of student teachers and teacher educators in mind. However, the model reconceptualised is transferable to other disciplines too.

**Promoting Teacher Reflection in Second Language Education** Thomas S. C. Farrell,2014-11-27 Taking the concept and the practice of reflective teaching forward, this book introduces a well-structured, flexible framework for use by teachers at all levels of development, from pre-service to novice to the most experienced. The framework outlines five levels of reflective practice—Philosophy; Principles; Theory-of-Practice; Practice; Beyond Practice—and provides specific techniques for teachers to implement each level of reflection in their work. Designed to allow readers to take either a deductive approach, moving from theory-into-practice, or an inductive approach where they start from a practice-into-theory position, the framework can be used by teachers alone, in pairs, or in a group.

**Teacher Reflection** Zia Tajeddin,Atsuko Watanabe,2022-09-15 This edited book has been compiled in honor of Thomas S.C. Farrell, one of the most distinguished scholars in theorizing and researching language teacher reflection. It examines teacher reflection in three main areas: policies, practices and the impact of teacher reflection on teachers’ practices and professional development. The data-driven chapters shed light on concerns and challenges experienced by teachers in diverse international contexts and institutions, and discuss the practical implications of their findings across a variety of policy settings. The book addresses aspects of reflective practice including macro and micro policies and constraints, as well as opportunities in the engagement of reflective practice. In addition, it explores teachers’ identity, cognition, emotion and motivation, areas which are relevant but often not discussed in the literature on reflective practice.

**Reflection on the Death of a Porcupine** D. H. Lawrence,2019-02-20 This collection of essays by the author of Lady Chatterley’s Loverpresents his musings on literature, politics and philosophy in a newly restored text. Though D. H. Lawrence was one of the great writers of the twentieth century, his works were severely corrupted by the stringent house-styling of printers and the intrusive editing of timid publishers. A team of scholars at Cambridge University Press has worked for more than thirty years to restore the definitive texts of D. H. Lawrence in The Cambridge Editions. Between 1915–1925, D. H. Lawrence wrote a series of “philosophicalish” essays covering topics ranging from politics to nature, and from religion to education. Varying in tone from lighthearted humor to spiritual meditation, they all share the underlying themes of Lawrence’s mature work: “Be thyself.” As far as possible, the editors of the Cambridge Editions series have restored these essays to their original form as Lawrence wrote them. A discussion of the history of each essay is provided, and several incomplete and unpublished essays are reproduced in an appendix.

**Shock Wave Reflection Phenomena** Gabi Ben-Dor,2007-08-28 This book is a comprehensive state-of-the-knowledge summation of shock wave reflection phenomena from a phenomenological point of view. It includes a thorough introduction to oblique shock wave reflections, dealing with both regular and Mach types. It also covers in detail the corresponding two- and three-shock theories. The book moves on to describe reflection phenomena in a variety of flow types, as well as providing the resolution of the Neumann paradox.
