Epidemiology, Evidence-Based Care, and Outcomes in Spinal Cord Injury Nader Fallah,Lisa N. Sharwood,Vanessa K. Noonan,Candice Cheung,2024-03-12 Spinal cord injury (SCI) is a life altering condition that has a profound effect on an individual's motor, sensory and autonomic functions which impacts their ability to participate in society and decreases their quality of life. There are emerging innovations that can help restore neurological function and existing best practices that can be implemented today to improve care, however these are not consistently applied in practice or understood by individuals with SCI and their families. It is estimated to take an average of 17 years for research evidence to be translated into practice. To shorten this timeframe, there is a need to: understand the current epidemiology of SCI in the context of an aging population, quantify the economic impact, determine the effect of the injury on outcomes (e.g. neurology, function, mortality, quality of life), and ensure the knowledge is implemented so individuals living with SCI can benefit.
