Writing in Foreign Language Contexts Rosa Manchón, 2009-07-09 This book represents the most comprehensive account to date of foreign language (FL) writing. Its basic aim is to reflect critically on where the field is now and where it needs to go next in the exploration of FL writing at the levels of theory, research, and pedagogy, hence the two parts of the book: 'Looking back' and 'Looking ahead'. The chapters in Part I offer accounts of both the inquiry process followed and the main insights gained in various long-term research programs. The chapters in Part 2 contribute a retrospective analysis of the available empirical research and of professional experiences in an attempt to move forward. The book invites the reader to step back and rethink seemingly well established knowledge about L2 writing in light of what is known about writing in FL contexts.

**na** Andreas Reichenbach, Andreas Bringmann, 2011-02-18 Müller cells make up just 0.005% of the cells in our central nervous system. They do not belong to the more esteemed family of neuronal cells but to the glia, a family of cells that until recently were seen as mere filling material between the neurons. Now, however, all that has changed. Sharing the insights of more than a quarter century of research into Müller cells, Drs. Andreas Reichenbach and Andreas Bringmann of Leipzig University make a compelling case for the central role Müller cells play. Everyone agrees that the eye is a very special and versatile sense organ, yet it has turned out in recent years that Müller cells are peculiar and multipotent glial cells. In the retina of most vertebrates and even of many mammals, Müller cells are the only type of (macro-) glial cells; thus, they are responsible for a wealth of neuron-supportive functions that, in the brain, rely upon a division of labour among astrocytes, oligodendrocytes, and ependymal cells. Even beyond such a role in the central nervous system as model glia, Müller cells are adapted to several exciting roles in support of vision. They deliver the light stimuli to the photoreceptor cells in the inverted vertebrate retina, aid the processing of visual information, and are responsible for the homeostatic maintenance of the retinal extracellular milieu. In *Müller Cells in the Healthy and Diseased Retina*, aimed not just at neurobiologists but at anyone concerned with retinal degeneration, every angle of Müller cells is covered, from an introduction to their basic properties, through their roles as 'light cables' and 'shock absorbers', to the part they play in diseases and disorders of the eye. Once these have all been covered in detail, the authors move on to discuss the future direction of research into these small but potent cellular phenomena. About the Authors Dr. Andreas Reichenbach was born in 1950 in Leipzig, Germany. He studied medicine and specialized as a physiologist, working on the mammalian retina. Since 1984, he has focused his efforts - and those of a growing number of fellows in his team - on Müller cell research. He has held a professorship at Leipzig University since 1994. After studying biology, Dr. Andreas Bringmann (\* 1960) worked in the field of systemic neurophysiology until he was inspired in 1996 by Andreas Reichenbach to research the most interesting cell, the Müller cell. He is now in the Department of Ophthalmology of the University of Leipzig where he is the head of the Basic Research Laboratory

**Bernhard Lichtenberg** Brenda L. Gaydosch, 2017-07-06 Bernhard Lichtenberg: Roman Catholic Priest and Martyr of the Nazi Regime is the definitive English biography of the martyred Nazi-era Berlin provost, Bernhard Lichtenberg. This work presents a broad overview of Bernhard Lichtenberg's life (1875–1943) in the context of history. It discusses the areas of his life that had the greatest impact on how he dealt with situations during the Second Empire, the Weimar Republic, and the Third Reich, and it gives a detailed account of his resistance to the Nazis and his imprisonment and death. Appendices present a wealth of primary sources on Lichtenberg's life, including a collection of his letters from prison which have not previously been made available in English.

**Yahweh's Council** Ellen White, 2014-04-28 Ellen White explores the depiction of the divine council under the authority of Yahweh in the type-scenes of the Hebrew Bible. She proposes criteria for determining a Council of Yahweh type-scene and membership requirements. Following these criteria the Council of Yahweh texts are Isaiah 6, 1 Kings 22, Job 1-2, Zechariah 3, and Daniel 7. After determining a cast of characters, the author explores the structure of the council and realizes that the structure contains three tiers with two divisions on tiers 2 and 3. The first tier belongs to the chief god, the second tier is called the Councilors and the two divisions are Judicial Officials and Advisors. The third tier is the Agents and the two divisions on this tier are the Court Officers and Commissioned. Characters who play a role relating to the council, but are not themselves members of the council are also analyzed. Finally, Ellen White evaluates the potential for conceptual evolution, especially in relationship to monotheism and the participation of human beings within the Council of Yahweh.

Retinal Glia Andreas Reichenbach, Andreas Bringmann, 2015-02-01 In 1851, Heinrich Müller discovered what he called “radial fibers” and what we now call Müller cells, as the principal glial cells of the vertebrate retina. Later on, other glial cell types were found in the retina, including astrocytes, microglia, and even oligodendrocytes. It turned out that retinal glial cells are essential constituents of the tissue. For instance, Müller cells appear to constitute the “core” of columnar units of clonally and functionally related groups of neurons. Their primary function is to support neuronal functioning by guiding the light towards the photoreceptor cells, removing excess neurotransmitter molecules from extracellular space, and performing efficient clearance of excess extracellular potassium ions. The latter two functions are also crucial for neuronal survival and are coupled to water clearance which is also essential. Müller cells are capable of “sensing” neuronal activity and modifying it by the release of signal substances (gliotransmitters). In cases of retinal injuries the Müller cells become reactive, and all above-mentioned functions are impaired. However, such de-differentiated Müller cells may proliferate, and may even serve as stem cells for the regeneration of a damaged retina. As well as the Müller cells, retinal astrocytes and microglial cells are important players in retinal development and function. This book gives a comprehensive survey of the

present knowledge on retinal glia.
