Japan In Space Brian Harvey, 2023-11-16 Guided by genius engineer Hideo Itokawa, Japan's space program began with small scientific satellites more than 50 years ago. Since then, its space probes have travelled to the Moon, Venus, the asteroids and even a comet. The country launched weather satellites to warn of typhoons, communications satellites to connect the Japanese archipelago and remote sensing technology to observe the Earth and warn of climate change. Engineering technology satellites became the basis of Japan's electronic industry as Japanese astronauts flew into space, working on their Kibo module on the International Space Station. Now, Japan is one of Asia's leading space powers, alongside China and India, vying for influence in the region. Its solid and liquid-fueled rockets are estimated to be among the most advanced and reliable in the world, its technology among the best. This book examines the history of Japan's space program, the country's current state of development and its future. It describes the extensive infrastructure that has gone into the forging of Japan's picturesque oceanside launch sites, training centers, testing facilities and tracking stations. This book also outlines the politics of space in Japan, financial difficulties, its space industry, the symbiotic relationship with the United States and the recent sharp change-of-course to invest in military satellites. From the role of influential personalities, such as Hideo Shima and Shinichi Nakasuka, to political leaders, such as Yasuhiro Nakasone and Takeo Kawamura, you will read about how Japan has paved its own star-lit path to space. The future may expect to send Japanese probes to Mercury and the moons of Mars, all while the first Japanese astronauts set foot on our own Moon and drive innovative rovers across its surface.

Mission Control Michael Peter Johnson, 2015-10-18 Brave astronauts, flaring rockets, and majestic launches are only one side of the story of spaceflight. Any mission to space depends on years--if not decades--of work by thousands of dedicated individuals on the ground. These are the people whose voices offer a friendly link to Earth in the void of space, whose hands maneuver rovers across the face of planets, and whose skills guide astronauts home. This book is a long-overdue history of three major centers that have managed important missions since the dawn of the space age. In Mission Control,

Michael Johnson explores the famous Johnson Space Center in Houston, the Jet Propulsion Laboratory in Pasadena, and the European Space Operations Centre in Darmstadt, Germany--each a strategically designed micro-environment responsible for the operation of spacecraft and the safety of passengers. He explains the motivations behind the location of each center and their intricate design. He shows how the robotic spaceflight missions overseen in Pasadena and Darmstadt set these centers apart from Houston, and compares the tracking networks used for different types of spacecraft. Johnson argues that the type of spacecraft and the missions they controlled--not the nations they represented--defined how the centers developed, yet these centers ended up playing vital national roles as space technology became a battleground for international power struggles in the Cold War years and even after. The most visible part of a conflict that was just as real as the wars in Korea, Vietnam, and Afghanistan and caused great global anxiety, mission control centers have served as symbols of national security in the public eye and pivotal links in the history of modern technology.

Volcanism and Tectonism Across the Inner Solar System T. Platz,M. Massironi,P.K. Byrne,H. Hiesinger ,2015-01-05 Volcanism and tectonism are the dominant endogenic means by which planetary surfaces change. This book aims to encompass the broad range in character of volcanism, tectonism, faulting and associated interactions observed on planetary bodies across the inner solar system - a region that includes Mercury, Venus, Earth, the Moon, Mars and asteroids. The diversity and breadth of landforms produced by volcanic and tectonic processes is enormous, and varies across the inner solar system bodies. As a result, the selection of prevailing landforms and their underlying formational processes that are described and highlighted in this volume are but a primer to the expansive field of planetary volcanism and tectonism. This Special Publication features 22 research articles about volcanic and tectonic processes manifest across the inner solar system.

An Anxious Peace Hans Mark, 2019-04-23 By any measure, Hans Mark was a warrior of the Cold War. Born in Mannheim, Germany, in 1929, he spent his early childhood in Vienna before escaping the Nazi Anschluss in 1938 and eventually emigrating to the United States, settling in New York. He graduated from high school in 1947, went west to attend the University of California, Berkeley, and later earned a PhD in physics from MIT. His work in nuclear engineering soon set him on a path that

would be shaped by aeronautics, space exploration, and national defense. It was through advanced technology that Mark believed the United States could win the Cold War. In *An Anxious Peace*, Mark recounts in detail his life as a twentieth-century “rocket man.” Here is the inside story of one who—in a career spanning more than six decades—was on the technological front line, from long-range bombers to the space shuttle. Along the way, Mark reveals many never-before-told stories from life at NASA and more. Readers will revel in learning the background behind the decision to place a plaque on Pioneer 10, a space probe that the NASA Ames Research Center designed to fly past the asteroid belt, Jupiter, and Saturn to collect data and images. Mark tells how he, Carl Sagan, and NASA insider John Naugle kept secret the addition of the now iconic 6x9-inch aluminum “message from humanity” until the probe had been launched. To this day Mark is pushing for a manned mission to Mars. One thing is sure: Hans Mark has left a major impact on academic and scientific communities that will be felt for decades to come.
