Monteverde Nalini M. Nadkarni, Nathaniel T. Wheelwright, 2000-03-09 The Monteverde Cloud Forest Reserve has captured the worldwide attention of biologists, conservationists, and ecologists and has been the setting for extensive investigation over the past 30 years. Roughly 40,000 ecotourists visit the Cloud Forest each year, and it is often considered the archetypal high-altitude rain forest. This volume brings together some of the most prominent researchers of the region to provide a broad introduction to the biology of the Monteverde, and cloud forests in general. Collecting and synthesizing vital information about the ecosystem and its biota, the book also examines the positive and negative effects of human activity on both the forest and the surrounding communities. Ecologists, tropical biologists, and natural historians will find this volume an indispensable resource, as will all those who are fascinated by the magnificent wonders of the tropical forests.

Urban Design Christa Reicher,2022-09-22 In this basic textbook, prospective architects, urban and landscape planners receive assistance in working on urban development projects and designs. This edition has been expanded by two chapters on informal urban planning and regional urban development. The contents presented and their preparation are based on the design process in practice and embed it in a theoretical framework of necessary background knowledge. As an introduction, an overview of the understanding of the city, of urban structures and the laws governing them is given. In order to make the multi-layered structure of the city more comprehensible, it is broken down into different layers and building blocks. The approach to urban design is described using the layer method in the form of successive phases. Examples of urban development projects and competitions illustrate the individual design steps.
