Thinking Strategies for Solving Problems Mailoo Selvaratnam,2016-05-18 Cognitive (thinking) strategies and skills are the tools for all types of thinking and problem solving. Competence in them is hence needed for effective learning and problem solving. Research suggests that many learning difficulties of students are due to their not being sufficiently competent in them. This monograph illustrates the use of five important problem solving strategies that would lead to more effective problem solving not only in science courses but also in our daily lives. Lecturers/ instructors/students at high school and tertiary education institutions should find the monograph useful. Since many problems in this monograph do not need science concepts, parts of the monograph may also be used by people without a science background.

Word Power: Phrasal Verbs and Compounds Brygida Rudzka-Ostyn,2008-08-22 Word Power: Phrasal Verbs and Compounds is a textbook for guided self-learning intended for post-intermediate and advanced learners of English. It contains some 1,100 phrasal compounds used with 17 particles/prepositions which combine with some 500 different verbs, nouns and adjectives. Numerous glosses allow the teacher to use it in very heterogeneous classes. Thanks to cognitive linguistics the material is organized around each particle giving the students an astonishing insight into the networks of metaphorical meanings of each particle. Furthermore, the book implements the most important findings and techniques in the field of learning a foreign language. This textbook will be a valuable companion for teachers and students.
